Health & Safety

Standard slinging

The standard slinging techniques presented in this document are practical guide to define the slinging method(s) for a given type of load.

They are used to establish Lifting Operations plan based on **Lifting Operation plan [BYTP-FOR-H&S-2140]**.

If, for a given lifting operation, the slinging method recommended within this document cannot be fully applied, then a slinging method prepared in accordance with **Safe Lifting Techniques [BYTP-INF-H&S-2137]**, verified (by a lifting supervisor and/or Methods department) and described in detail in the associated Lifting Operation plan.

The sheet of this document can also be used as a support for the briefing of the various actors involved in the related lifting operation.

Table of contents

1. Laydown concrete skip

	Empty weight (T)	Max weight (T)	2 leg chains (T)
1000 L	0,33	2,7	3
1250 L	0,52	3,5	4
1500 L	0,53	4,1	4
2000 L	0,60	5,6	6
2500 L	0,62	6,6	7

Angle < 60°

2 legs chain
> Max weight

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Fold back the hose of the concrete skip (clamp) before lifting
- Place the skip on its podium or lying on the ground

2. Retention pallet tray

	Empty weight (T)	Max weight (T)	4 leg chain (T)
400 L	0,43	0,48	0,5
1000 L	0,53	1,2	1,2

Angle < 60°

4 legs chain >
Max weight

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Empty before lifting
- Close and lock the doors before lifting

3. Autovid boat skip / All-doors waste skip

Various models and volumes:

	Empty weight (T)	Max weight (T)	1 leg chain (T)
1000 L	0,28	2,4	3
1500 L	0,55	3,6	4
2000 L	0,64	5,5	6

Angle 0°

1 leg chain > Max weight

Angle 0°

1 leg chain > Max weight

	Empty weight (T)	Max weight (T)	1 leg chain (T)
300 L	0,1	1	1
500 L	0,12	1	1
600 L	0,12	1,2	1,2
800 L	0,2	1,5	2

Angle 0°

1 leg chain > Max weight

INSTRUCTIONS

- Ensure that the handle arm is locked before each lifting
- Respect the Safe Working load (SWL)
- When loading, do not exceed the height of the skip
- Use of concrete and mortar is prohibited with those skips

4. Drawing & plan house

Empty weight (T)	Max weight (T)	4 leg chain (T)
0,25	0,3	0,3

Angle < 60°

4 legs chain > Max weight

INSTRUCTIONS

- Empty before lifting

5. Converters – vibrating needles

Max weight (T)	2 leg chain (T)
0,1	0,1

Angle < 60°

2 legs chain
> Max weight

Max weight (T)	1 leg chain (T)
0,1	0,1

Angle 0°

1 leg chain >
Max weight

Textile sling

6. Electrical boxes

Various models and volumes:

Max weight (T)	2 leg chain (T)
0,1	0,1

Angle < 60°

2 legs chain
> Max weight

7. Cutting workshop

Max weight (T)	4 leg chain (T)
2,5	3

Angle < 60°

4 legs chain > Max weight

4 permanent chain slings

INSTRUCTIONS

- Empty before lifting

8. Tanks / IBC

Various models and volumes:

Empty weight (T)	Max weight (T)	4 leg chain (T)
0,6	1,8	2

Angle < 60°

4 legs chain > Max weight

Max weight (T)	1 leg chain (T)	4 leg chain (T)
1,2	1,2	1,2

Angle < 60°

1 leg chain > Max weight

4 legs chain + 2 textile slings > Max weight

In priority

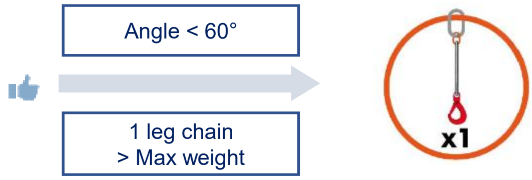
OR

+ Load secured with a ratchet strap 2 T

9. Big bags

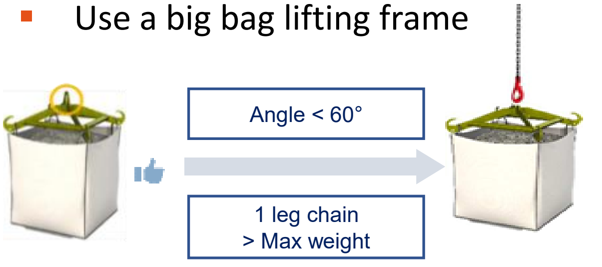
- Priority - Bags must always be lifted in skip when a skip is onsite

Empty weight (T)	Max weight (T)	1 or 4 leg chain (T)
0,3	1,8	2



- If no skip are available :
  - Use a lifting basket

  - Use a big bag lifting frame



- If big bag frame is not avaible Lifting by the handles is authorized only for lifting from drop of after transportation / from storage , or for unloading big bags of materials (sand, gravel)

INSTRUCTIONS

- **Handling at ground level - Avoid any type of overhead lift**
- Use only big lifting basket with an indicated SWL and identified lifting points
- Do not lift big bag with spill containment basket – Handle them separately
- Ensure that the lifting handles are in good condition and the big bag itself is not damaged (tears) before each lifting
- Respect the Safe Working load (SWL) of the big bag & frame support
- Respect the filling rules (2/3 height Max)
- Do not use big bags for lifting equipment with sharps edges (steels, wood, etc

10. Stairs Combisafe

Max weight (T)	1 or 2 leg chain (T)
0,1 / 12 steps	0,1

Angle 0°

1 leg chain > Max weight

For the installation: 1 round sling (> Max weight) to incline the stair

Angle < 60°

2 legs chain > Max weight

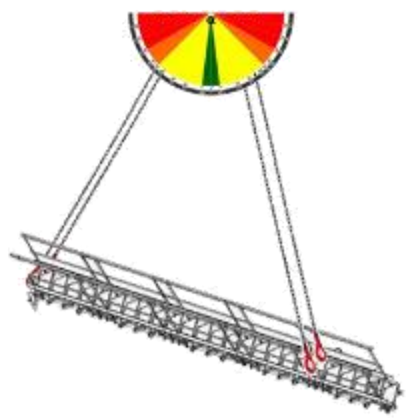
For the handling: 2 round slings > Max weight

11. Stairs Anoxa

Max weight (T)	4 leg chain (T)
0,15 / 5 steps	0,5

Angle < 60°

4 legs chain > Max weight



12. Escalibs

Nb of modules	1	2	3	4	5	6	7	8
Weight (T)	0,6	1	1,3	1,7	2	2,4	2,7	3,1

Lifting of the adjustable base

Angle < 60°

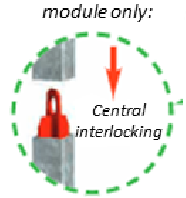
4 legs chain > Max weight

Lifting of the intermediate modules

Angle < 60°

1 leg chain > Max weight

Lifting a single module only:



Lifting of the full escalibs with top module

Angle < 60°

2 legs chain > Max weight

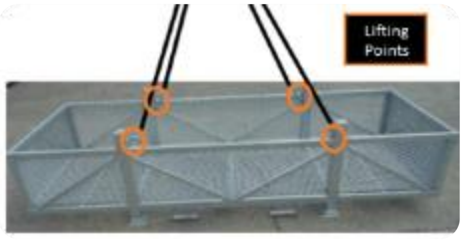
Lifting the complete staircase:

INSTRUCTIONS

- Ensure that the modules are properly locked together and free of any loose objects
- Use the two main lifting rings to lift the full escalib - do not use the central ring of the top module
- Do not lift more than 8 modules simultaneously

13. Storage basket

Dimension (m)	1,5	3,1	4	6,3	4 leg chain (T)
Max weight (T)	1,75	1,75	1,75	1,75	3,15



Various models and volumes:

Angle < 60°

4 legs chain > Max weight

Load must be fully contained within the basket

Max weight (T)	4 leg chain (T)
1	1

Angle < 60°

4 legs chain > Max weight

Secure the load (with ratchet straps…)

Max weight (T)	4 leg chain (T)
1	1

Angle < 60°

4 legs chain > Max weight

Strap the load

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Lift one basket at a time

14. Small compactors / compressors

Max weight (T)
Depends on model

Angle 0°

1 leg chain > Max weight

Angle 0°

1 leg chain > Max weight

15. Containers

Max weight (T)
According to type of container

Angle < 60°

4 legs chain > Max weight

4 permanent chain slings

INSTRUCTIONS

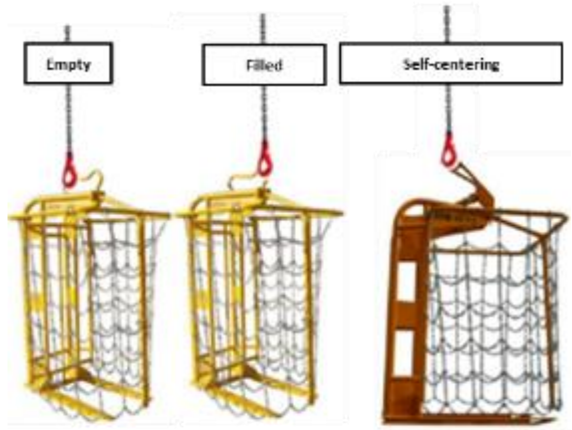
- Respect the Safe Working load (SWL)
- Visual check of the permanent slings before each lifting
- Visual check of the overall state of the container (floor, upright, etc.)

16. Brick forks

Max weight (T)	1 leg chain (T)
2	2

Angle 0°

1 leg chain > Max weight



INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Strap or film the package before each lifting
- Check that the fence is closed and the locked in place before each lifting
- Check that the annual periodic verification is valid

17. Tool box / Storage box

Max weight (T)	4 leg chain (T)
0,6	0,6

Angle < 60°

4 leg chain > Max weight

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- For formwork rods only, ensure that the load does not exceed the height of the trolley by more than 20 centimeters

18. Trolley / rack / bottles (cylinders)

Max weight (T)	1 leg chain (T)
0,6	0,6

Two-points strapping of bottle is mandatory

Angle 0°

1 leg chain > Max weight

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Strap the bottles to the rack and checks the absence of any loose items
- Lifting of bottle/cylinders without a rack is strictly forbidden

19. Barrels

Max weight (T)
Depend on model

Lifting with clamp

Angle 0°

1 leg chain > Max weight

Lifting without clamp (to be avoided)

Angle < 60°

2 legs chain > Max weight

For handling: 2 round slings > Max weight

Textile sling

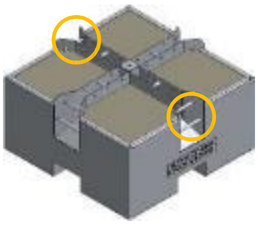
INSTRUCTIONS

- Avoid any type of overhead lifting when using a clamp - Handling at ground level

20. Concrete ballast blocks

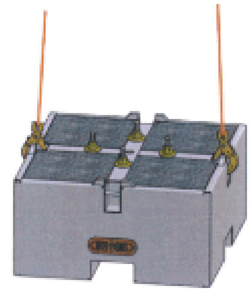
Individual ballast blocks

Max weight (T)	2 leg chain (T)
1,5	12



Angle < 60°

2 Legs Chain set – SWL - 12T

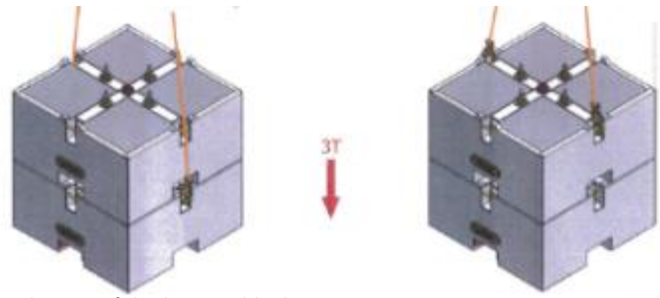


Ballast blocks twinned vertically

Max weight (T)	2 leg chain (T)
3	12

Angle < 60°

2 legs chain 12T



Slinging of the bottom block

Slinging of the top block

INSTRUCTIONS

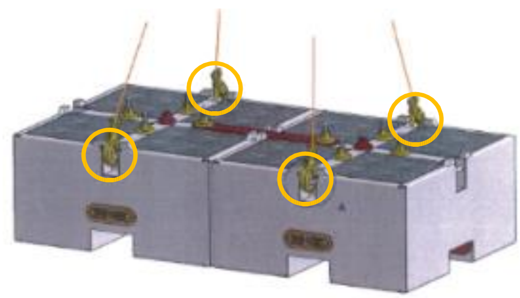
- Handling with twinning rod only

Ballasts blocks twinned horizontally

Max weight (T)	4 leg chain (T)
3	12

Angle < 60°

4 legs chain 12T



INSTRUCTIONS

- Handling with connection plate

Commun concrete ballast block

Max weight (T)	2 legs chain (T)
2,5	2,5

Angle < 60°

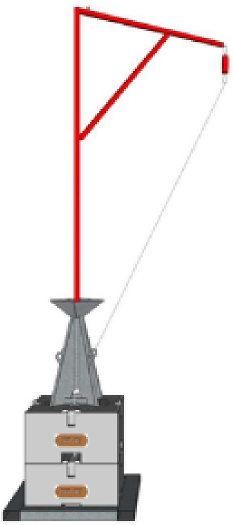
2 legs chain > Max weight

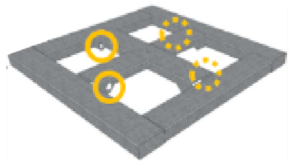
2 lifting hands > Max weight

INSTRUCTIONS

- Use the proper lifting hands
- Ensure that the lifting hands are in the correct position with back plate horizontal to surface

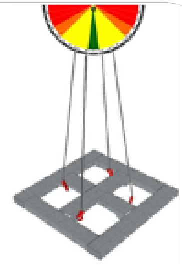
21. Jib

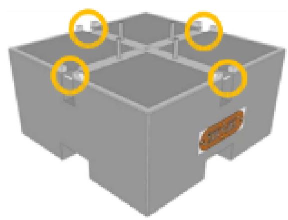




Angle < 60°

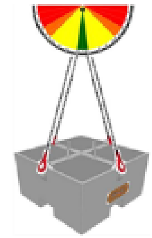
4 legs chain
> Max weight

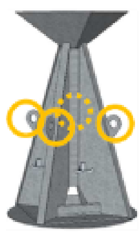




Angle < 60°

4 legs chain
> Max weight

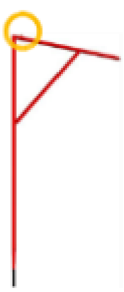




Angle < 60°

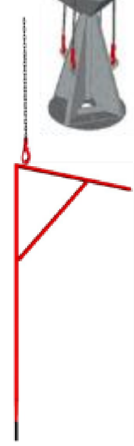
4 legs chain
> Max weight

Total weight (T)	3,3
Support (T)	0,13
Lest (T)	1,5
Funnel (T)	0,1
Jib (T)	0,08



Angle 0°

1 leg chain
> Max weight



22. Washing tower

Horizontal translation

Angle < 60°

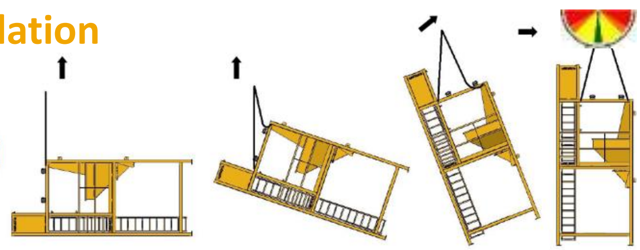
4 leg chain > Max weight

Max weight (T)	4 leg chain (T)
1,3	1,3

Tilting and vertical translation

Angle < 60°

4 leg chain > Max weight



23. Washing platforms

Max weight (T)	4 leg chain (T)
0,5	0,5

Angle < 60°

4 legs chain > Max weight

Only to lower the front support

Angle < 60°

4 legs chain > Max weight

24. Loading dock

Various models – Use preferably ones with lifting rings

Max weight (T)	4 leg chain (T)
0,3	0,3

Angle < 60°

4 legs chain > Max weight

textile sling

Angle < 60°

2 legs chain > Max weight

For handling: 2 round slings > Max weight

Protect the slings from any sharp edges

25. Floor saw

Max weight (T)
Depend on model

Angle 0°

1 leg chain
> Max weight

26. Slipform machine

Max weight (T)
Depend on model

Angle 0°

1 leg chain
> Max weight

27. Radial saw

Max weight (T)
Depend on model

Angle < 60°

4 legs chain
> poids Max

28. Sleeve / sheath

Cerclage obligatoire

Max weight (T)
Depend on model

Angle 0°

Chaine 1 brin
> poids Max

1 élingue textile
> poids Max

textile sling

29. Cables / Reels

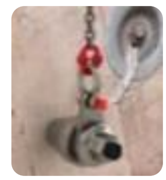
Max weight (T)
Depend on model

Angle 0°

1 leg chain > Max weight	1 spreader bar + special axis

Angle < 60°

2 legs chain > Max weight	Special axis



30. Pipes

Max weight (T)
Depend on number and model

Angle < 60°

2 legs chain > Max weight	2 textile slings > Max weight

31. Pumps

Max weight (T)
Depend on model

Angle 0°

1 leg chain
> Max weight

1 textile sling
> Max weight

Angle 0°

1 leg chain
> Max weight

Angle 0°

1 leg chain > Max weight

INSTRUCTIONS

- Check the SWL before the lift

32. Diesel pumps

Max weight (T)
Depend on model

Angle <60)

4 legs chain
> poids Max

Angle 0°

1 leg chain > Max weight

INSTRUCTIONS

- Check the SWL before the lift

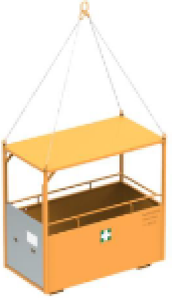
33. Rescue evacuation cage

INSTRUCTIONS
- Check the yearly verification

Max weight (T)	2 leg chain (T)
0,5	1

Angle < 60°

4 legs chain 1 T attached on the lifting rings



Various models and volumes

Max weight (T)	2 leg chain (T)
0,2	1

Angle < 60°

4 legs chain
> Max weight

Ensure cabinet is securely locked or empty

34. Aluminum beams – Wooden timbers

Max weight (T)
According to materials and quantity

Use extended basket

Angle < 60°

4 legs chain
< poids Max

Lifting by package

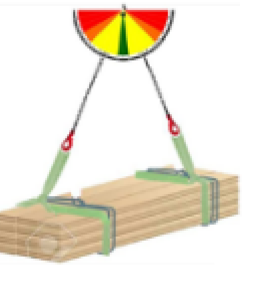
Strapping mandatory

Angle < 60°

2 legs chain
> Max weight

2 textile slings
> Max weight

textile sling



INSTRUCTIONS
- Check the SWL before the lift
- Make sure the load is balanced before the lift
- Sling on opposite sides for lifting in packages
- Lifting in basket configuration
- Good practice: strapping with ratchet strap

35. Metal beams - Normal profile I-beam

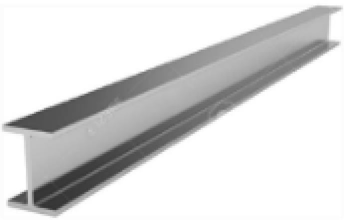
Max weight (T)
Depend on model and quantity

Use in priority the specifique lifting gears

Angle < 60°

2 leg chain > Max weight | 2 textile slings > Max weight

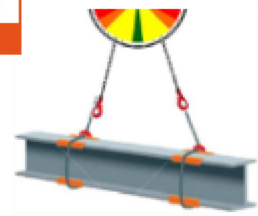
Package lifting



Angle < 60°

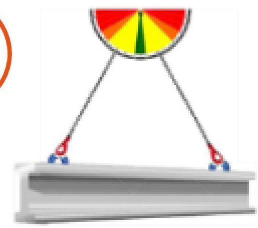
2 leg chain > Max weight | 2 textile slings > Max weight

Edge protection



Angle < 60°

2 leg chain > Max weight | Lifting rings with compliant welds



INSTRUCTIONS

- Check the SWL before the lift
- Protect the slings from sharp edges
- Sling on opposite sides for lifting in packages
- Make sure the load is balanced before the lift
- Lift only one item at a time

36. Doka formwork

Max weight (T)
0,050 by panel (Possibility to lift an assemble of panels)

Angle < 60°

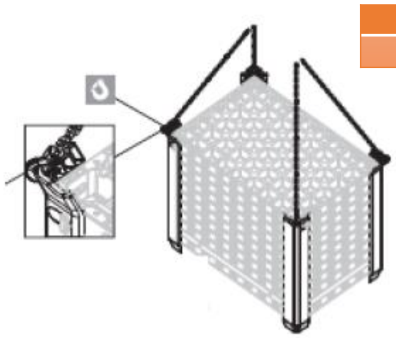
2 leg chain > poids Max | Doka Lifting hooks (0,5T Max/hook)

Angle < 60°

4 leg chain > Max weight

Add shackles if the crane hooks are too big for the rack lifting ring

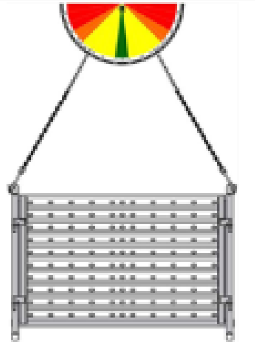
37. PERI Duo system formwork



Max weight (T)
0,050 by panel (Possibility to lift an assemble of panels)

Angle < 60°

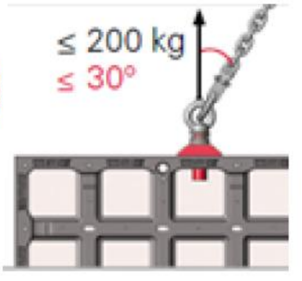
4 legs chain
> poids Max



Lifting of assembled panels

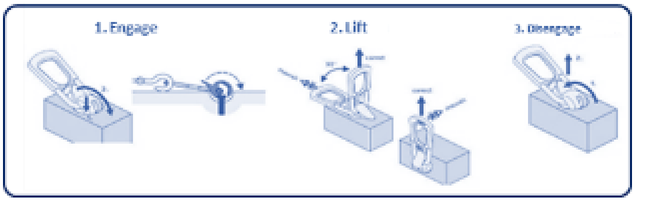
Angle < 60°

2 legs chain
> poids Max



38. Pre-Fab Concrete pieces (utilities...)

Max weight (T)
0,050 by panel (Possibility to lift an assemble of panels)



Angle < 60°

Special pliers for
hoses and nozzles

INSTRUCTIONS

- Handling at ground level - Avoid any type of overhead lift

39. Formworks

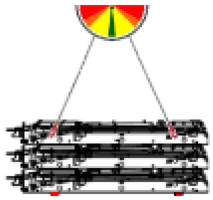
Max weight (T)
Depend on dimension

Max load per lifting ring (T)
1,95

Horizontal translation

Angle < 60°

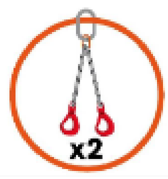
4 leg chain
> Max weight

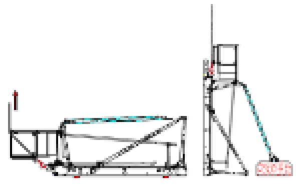


Tilting and vertical translation

Angle < 60°

2 leg chain
> Max weight

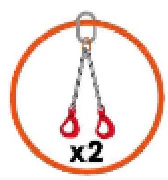


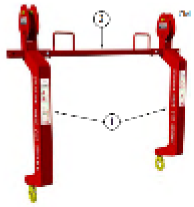


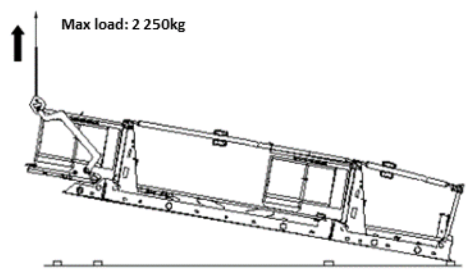
Flat lift for formwork with great heights

Angle < 60°

2 leg chain
> Max weight







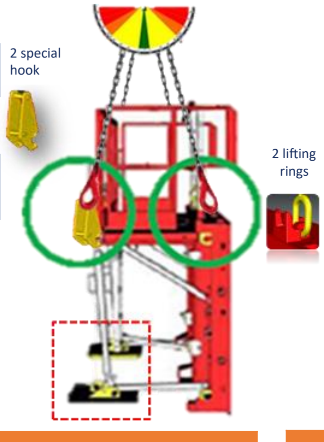
INSTRUCTIONS

- Ensure load stability during all phases of the lifting operation
- Check the condition of the railings after the lifting operation

1,5 meter high panel equiped with cast iron weights

Angle < 60°

4 leg chain
> Max weight

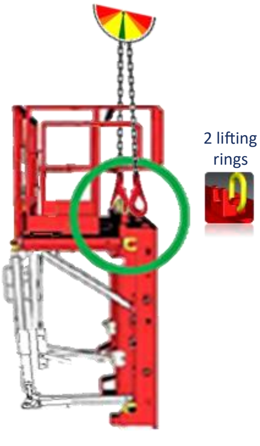


Weighted load
0,800 to 1T depending on the weights used

1,5 meter high panel without cast iron weights

Angle < 60°

2 leg chain
> Max weight



Dimensions
H = 1,5 and L = 2,40 m

Weight alone
0,64 T

40. Stop Ends of diaphragm wall

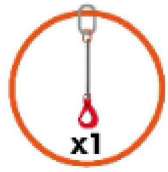
Max weight (T)
Depend on model and quantity

Angle < 60°

4 legs chain
> Max weight

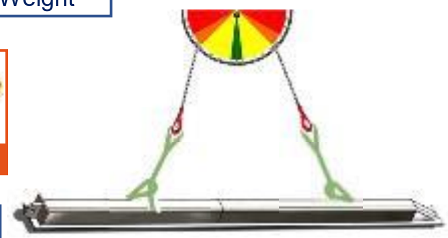
2 shackles
> Max weight

Angle 0°

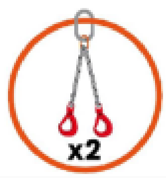


1 leg chain
> Max weight

With or without
lyre shackle
> Max Weight



Angle < 60°



4 leg chain
> Max weight

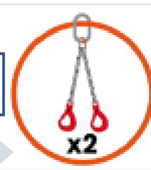
2 round textiles slings
> Max weight

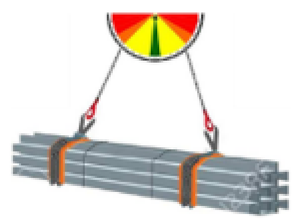
Protect the slings from
sharp edges

41. Sheet piles

Max weight (T)
Depend on model and quantity

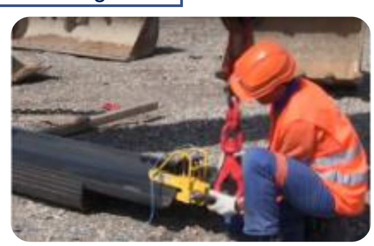
Angle < 60°



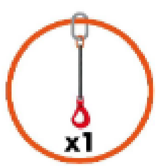


2 legs chain
> Max weight

2 round textiles
slings / cables
> Max weight

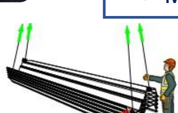


Angle 0°



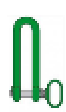
1 leg chain
> Max weight

Clamp or shackle
for sheet pile
> Max weight



Clamp for
sheet pile

Shackle for sheet pile



INSTRUCTIONS

- Check proper function and condition for self release type sheet pile clamps

42. Hammer / vibrator

Max weight (T)
Depend on model

Angle < 60°

4 legs chain
> Max weight

2 round textile slings / wires
> Max weight

Lift in vertical or horizontal position with 2 or 4 legs depending on the modem

Angle 0°

1 wire sling > Max weight

INSTRUCTIONS

- Mandatory daily check by operators

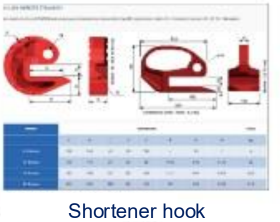
43. Tubing

Max weight (T)
Depend on dimension and quantity

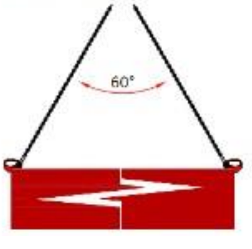
Angle < 60°

2 legs chain
> Max weight

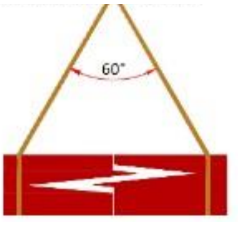
Specific gears

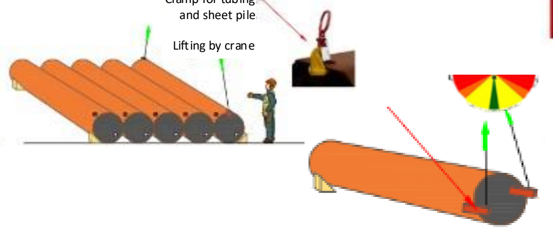


Shortener hook



Cable slings or flat webbing only in basket configuration





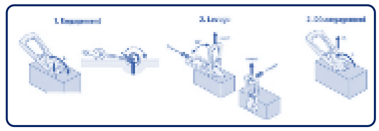
44. Jersy barriers

Max weight (T)
2,5

Cast-in handle for frequent lifting

Angle < 60°

2 legs chain
> Max weight



Clamp for frequent lifting

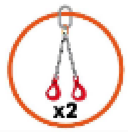
Angle 0°

1 cable sling
> Max weight

Slings for occasional lifting

Angle < 60°

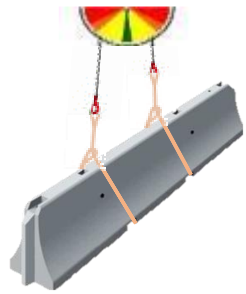
2 legs chain
> Max weight



2 textile slings
> Max weight

Identification of center of gravity

Sling protection for sharp edges



INSTRUCTIONS

- Handling at ground level - Avoid any type of overhead lift (except for lifting with cast-in handle)

45. Lego block

Max weight (T)
2,5

Lifting / Handling with eye bolts

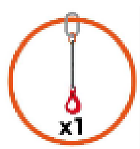
Angle < 60°

2 legs chain
> Max weight

Lifting / Handling with clamp

Angle 0°

1 leg chain
> Max weight



INSTRUCTIONS

- Avoid any type of overhead lift
- Do not lift by metal handles
- Select the lifting gears SWL according to the weight of the block to be lifted

46. Steel Rebar

Max weight (T)
Depend on model and quantity

Angle < 60°

2 leg chain
> Max weight

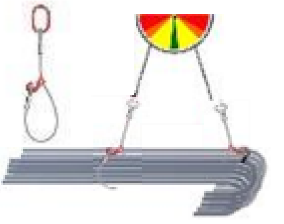
2 cable slings with sliding choker hook or textile slings
> Max weight

Sling protection for sharp edges

Angle < 60°

2 legs chain
> Max weight

2 cable slings with sliding choker hook or textile slings
> Max weight



Diameter (mm)	4	5	6	7	8	10	12	14	16	20	25	32	40	50
Weight per linear meter (kg)	0,099	0,154	0,22	0,302	0,395	0,617	0,888	1,208	1,578	2,466	3,854	6,313	9,865	15,413

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- **If feasible, lifting with a 5-sided basket**
- Possibility to lift two loads side-by-side with 4 legs chains
- Ensure that the bundles are tightly squeezed and made of bars of the same length
- Visual check of the condition of the slings before each lift
- The slings supplied by the suppliers can be used (after inspection) for unloading and must be discarded immediately when the package is unpacked

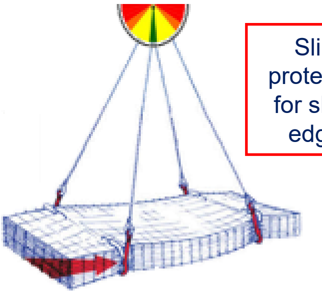
47. Welded wire mesh

Max weight (T)
Depend on dimension and quantity

Angle < 60°

2 legs chain
> Max weight

4 hooks for welded mesh or 4 textile slings
> Max weight



Sling protection for sharp edges

Panel designation ADETS	ST 15 C	ST 20	ST 25	ST25 C	ST 25CS	ST 35	ST 40C	ST 50	ST50C	ST 60	ST 65C
Panel weight (kg)	21,31	35,81	43,49	57,98	28,99	57,98	86,98	75,84	113,76	100,60	143,71

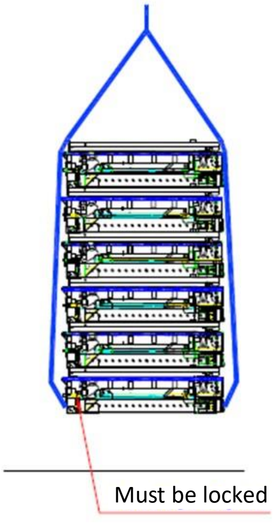
Package weight (kg)	1492	1432	1740	1739	1160	1739	1740	1517	1706	1310	1437

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- The slings supplied by the suppliers can be used (after inspection) for unloading and must be discarded immediately when the package is unpacked

48. Working platform

Max weight (T)
Depend on dimension and quantity



Width 1.70 m folded

	Without corner return (T)	With Maximum 2 corner returns (T)
M1	0,5	-
M2	0,7	1
M3	1	1,3
M4	1,1	1,5

Width 2.50 m folded

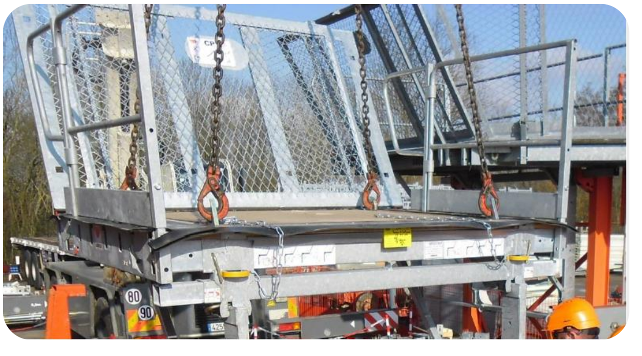
	Without corner return (T)	With Maximum 2 corner returns (T)
M1	0,6	-
M2	0,8	1,2
M3	1,2	1,6
M4	1,5	1,9

Details of handling points:

Angle < 60°

4 legs chain
> Max weight

Anti-lift safety system
MUST be engaged



Visual check of the position of the lifting rings and of the anti-lift safety system on the overall length is mandatory before the lift

INSTRUCTIONS

- Set up the sides railings before the lift
- Check for any material/equipment on the load before the lift
- Check that the anti-lifting safety is in place when preparing the console
- Unhook the slings on the sail side first then the slings on the empty side

49. Waste skip

Max weight (T)
Depend on dimension and quantity

Angle < 60°

4 legs chain > Max weight

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Respect the filling rules
- Check the good condition of the skip

50. Power tools / small equipment and materials

Angle < 60°

4 legs chain > Max weight

INSTRUCTIONS

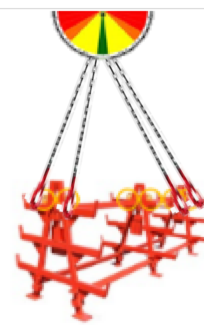
- Power tools / small equipment and materials must be lifted within 5-sided baskets

51. Storage racks

Max weight (T)
0,3

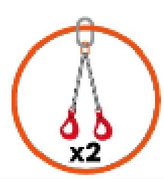
Angle < 60°

4 legs chain > Max weight



Angle < 60°

2 legs chain > Max weight



INSTRUCTIONS

- The rack to lift MUST be empty
- To lift multiple racks fixed together, the lifting safety pin must be in place

52. Cages

Max weight (T)
0,75

Angle < 60°

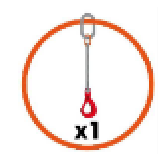
4 leg chain > Max weight

53. Mortar pump

Max weight (T)
Depend on model

Angle 0°

1 leg chain > Max weight



INSTRUCTIONS

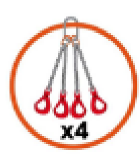
- Respect the Safe Working load (SWL)
- Remove the vibrating screen before lifting

54. Mixer

Max weight (T)
Depend on model

Angle < 60°

4 leg chain > Max weight



INSTRUCTIONS

- Fix the safety pins of the handles before lifting

55. Lifting table

Max weight (T)
Depend on model

Angle < 60°

2 legs chain > Max weight

2 textile slings > Max weight

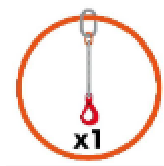
Edge protection

56. Generators

Max weight (T)
Depend on model

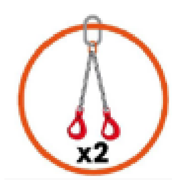
Angle 0°

Chaine 1 brin > poids Max



Angle 0°

Chaine 1 brin > poids Max

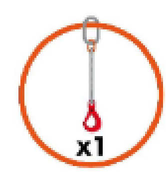


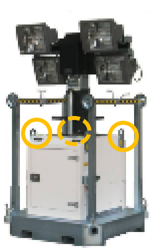
57. Lighting mast

Max weight (T)
Depend on model

Angle 0°

Chaine 1 brin > poids Max





Angle < 60°

4 legs chain > poids Max

58. Plywood

Max weight (T)
Depend on dimension and quantity

Lifting with basket

Angle < 60°

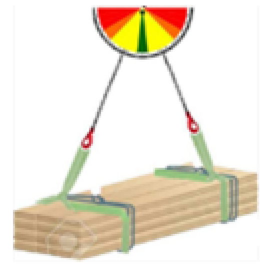
4 legs chain > Max weight

Refer to section 13. "Storage basket"

Lifting as package

Angle < 60°

4 legs chain > Max weight



2 textile slings > Max weight

Edge protection

INSTRUCTIONS

- Respect the Safe Working load (SWL)
- Ensure load stability before the lift
- Make sure the load is balanced before the lift
- Sling on opposite sides for lifting in packages
- Good practice strapping with a ratchet strap

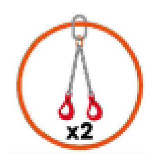
59. Double wall access ladder

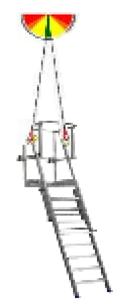
Max weight	Weight by rigging point
Depend on dimension	Around 19,5kg

With a 2 leg chain with hooks

Angle < 60°

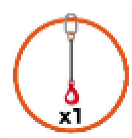
2 legs chain > Max weight

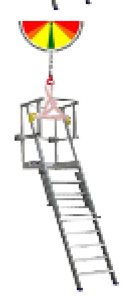




With a 1T textile sling and a 1 leg chain

Angle 0°





1 leg chain > Max weight

1 textile sling > Max weight

Folded and loaded in a 5-sided basket of suitable length

Refer to section 13. "Storage basket"

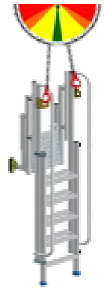
60. Excavation access ladder

Max weight	Weight by rigging point
Depend on dimensions	Around 20kg

With a 2 legs chain with hooks

Angle < 60°

2 legs chain > Max weight

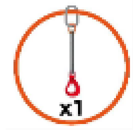


With a 1T textile sling and a 1 leg chain

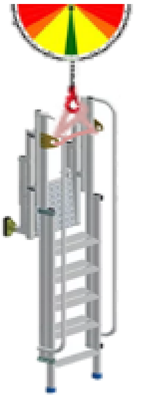
Angle 0°

1 leg chain > Max weight

1 textile sling > Max weight



Élingue textile



Folded and loaded in a 5-sided basket of suitable length

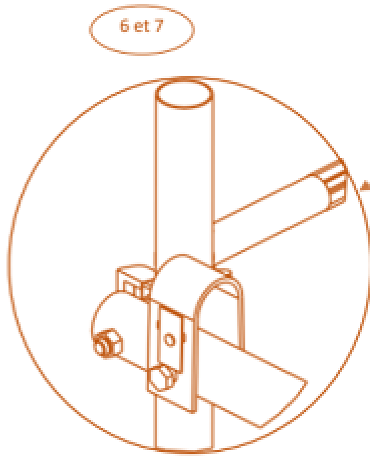
Refer to section 13. "Storage basket"

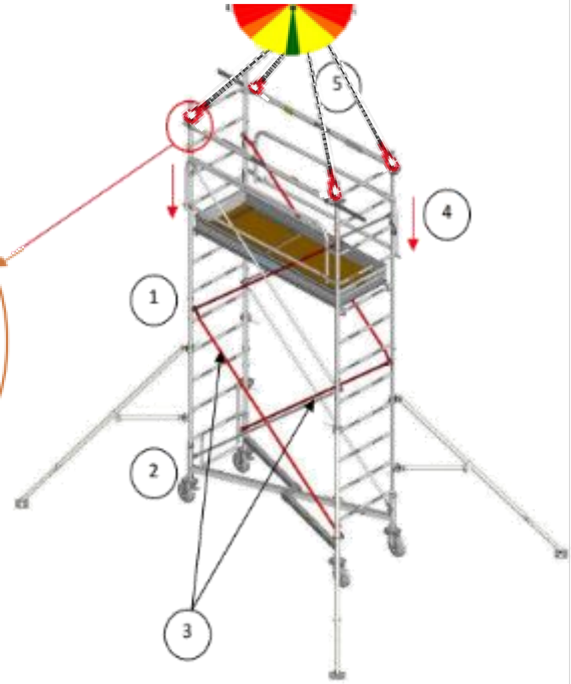
INSTRUCTIONS

- Fold the access ladder before the slinging
- Never use the end of the hook for slinging
- Lifting with hooks can only be perform via the ladder lifting points
- To use a 5-sided basket, the load MUST be fully contained

61. Scaffolding

	Maximal load (T)
Lifting ring	0,15
Lifting complete set	0,6



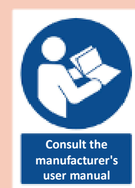


Angle < 60°

4 leg chain
> Max weight

Kit to be ordered with the scaffolding

INSTRUCTIONS



- Adapt the spreader bars to the lenght of the scaffolding
- Spreader bars must be fixed on the exterior faces of the scaffolding
- The kit clamp must be placed below the ladders rungs
- During the lift, the scaffolding must be free of any load (material, equipment and personnel)
- Mind the slings angles – Ensure to comply with the standards in force
- **The lifting kit must only be used for the scaffolding models for which it is designed. Refer to the instruction stuck on the kit accessory and its notice**
- Check for loose objects before lifting

GENERIS G750	2m80	5m80	8m80	11m50
Stabilizer length(m)	4,28	4,28	5,20	6,80
Stabilizer width(m)	3,04	3,00	3,95	6,55
Wheel diameter(mm)	Ø200	Ø200	Ø200	Ø200
allowed load / wheel(kg)	205	205	205	205
Weight (kg)	180	310	430	571

62. Shoring tower (page 1 of 3)

MILLS Touréchaf

Angle < 45°

4 legs chain
> poids Max

Components required for 1.50 m x 1.50 m frame

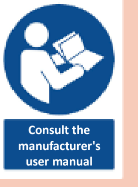
Type of tower	1	2	3	4	5
Number of levels	1	2	3	4	5
Minimum height[1]	1.82 m[2]	2.37 m	3.37 m	4.37 m	5.37 m
Maximum height	2.46 m	3.46 m	4.46 m	5.46 m	6.46 m
Screw jack	4	4	4	4	4
1.50 m ledger	4	4	4	4	4
1.50 m access frame	1	1	1	1	1
1.50 m frame	3	7	11	15	19
2 way adjustable head	4	4	4	4	4
1.50 m access platform	0 / 2	2	2*	4	4
Weight (kg)	140 / 170	220	270	350	400

INSTRUCTIONS

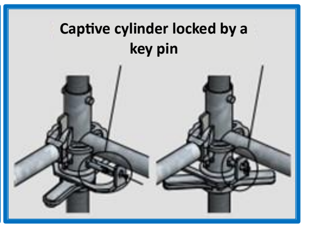
Swivel-locking connector:

- Between frames.
- Between frame and screw jack.

The tower can then be moved safely by crane



ALTRALIGHT ALTRAD



Angle < 60°

4 leg chain
> poids Max

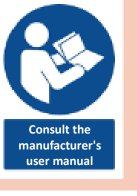
Configuration	P+1+0+V	V+1+0+V	V+2+0+V	V+3+0+V	V+4+0+V	V+5+0+V
Tower height (cm) (Excludin drop stroke)	126-182	202-241	231-341	331-441	431-541	531-641
Tower weight (kg)	121	155	191	227	290	326
Allowed load (T) Cf. NF P-93-550	5,5	5,5	5,5	5,5	5,5	5,5
Allowed load (T) Cf. NF P-93-551	4,1	4,1	4,1	4,1	4,1	4,1

INSTRUCTIONS

- Ensure that the captive cylinders are locked before each lifting
- All lift must be performed via the eyebolts of the top section of the shoring tower

WARNING

The Anti-lift safety system of the floor sections must be engaged to avoid any unhooking event

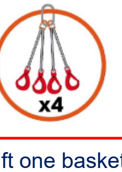


With basket

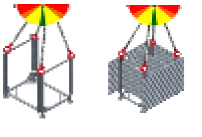
Max weight (T)
Depend on model and load

Angle < 60°

4 legs chain
> poids Max



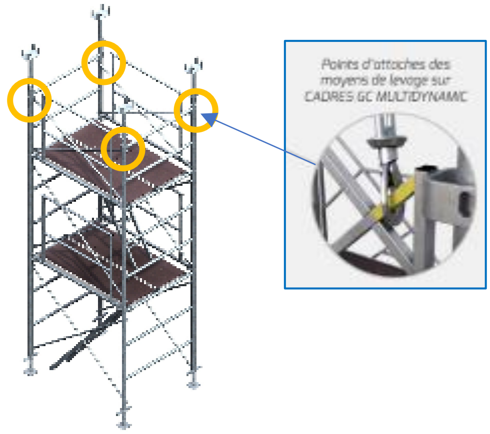
Lift one basket at a time



62. Shoring tower (page 2 of 3)

STAFLEX ALU MULTIDYNAMIC ALTRAD

Max weight (T)
Depend on the configuration



Angle < 60°

4 legs chain
> Max weight

INSTRUCTIONS

- Do not lift or drag a tower constituted with more than 4 frames
- MANDATORY : Use a lifting gear on each corners of the tower

WARNING

Ensure that the locking devices are engaged at the junctions of each STAFLEX frames

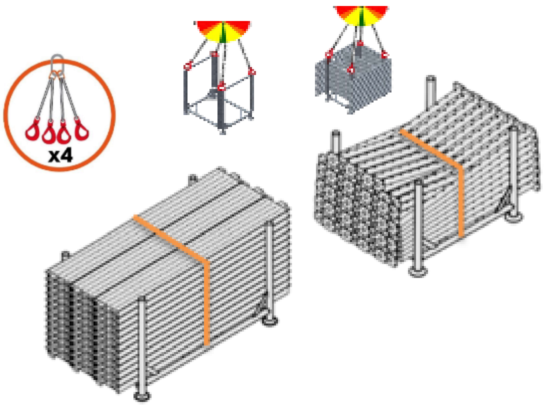
With basket

Max weight (T)
Depend on model and load

Angle < 60°

4 legs chain
> poids Max

Lift one basket at a time

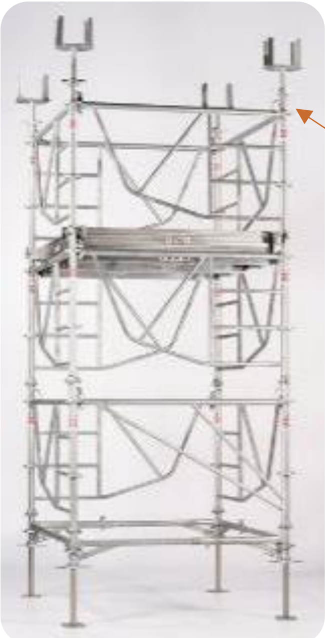


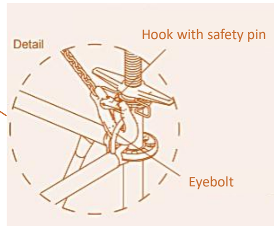
INSTRUCTIONS

- Lift with STAFLEX basket with respect to the SWL
- Basket weight depending on the model and quantity
  Refer to the equipement notice (heaviest capacity is 2T)
- Strapping of loads before lifting

62. Shoring tower (page 3 of 3)

Max weight (T)
Depend on the model and its configuration





Angle < 60°

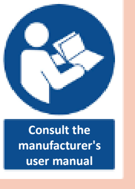
4 legs chain
> Max weight

INSTRUCTIONS

- All lift must be performed via the eyebolts of the top section of the shoring tower
- Do not lift a shoring tower higher than 13,5 meters (overall hight)

WARNING

Work platforms must be properly secured



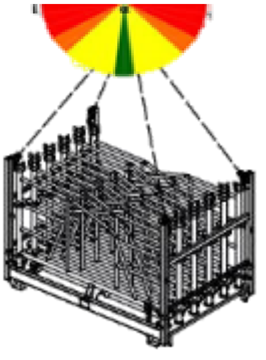
With basket

Max weight (T)
Depend on model and load

Angle < 60°

4 legs chain
> poids Max

Lift one basket at a time



INSTRUCTIONS

- Basket weight depending on the model and quantity
  Refer to the equipement notice
- Ensure that each side of the basket are properly fixed
- Ensure that the safety pins are in place
