Bouygues Travaux Publics – Construction (Design and Management)  
Regulations 2015

**Bouygues Travaux Publics (BYTP) is committed to creating safe and healthy working environments and to the implementation of good Health and Safety practice in the design, implementation, and delivery of all projects.**

In accordance with the roles of duty holders under the Construction (Design and Management) Regulations 2015 (CDM) and the Building Safety Act 2022 (BSA), and with reference to:

British Standards Institution (BSI):

*Flex 8671: Built environment – Core criteria for building safety in competence frameworks 2021.*

*PAS 8671:2022: Built environment – Framework for competence of individual Principal Designers- Specification and*

*PAS 8672: 2022: Built environment – Framework for competence of individual Principal Contractors – Specification*

When appointed in any CDM duty holder role, BYTP will ensure that all aspects of project delivery achieve compliance with, or exceeds the requirements of CDM, the legislative and regulatory frameworks, and associated Approved Codes of Practice.

BYTP will ensure that all personnel involved in the design and implementation of projects are competent in terms of behaviours, legislation and regulatory frameworks, technical frameworks and will manage both design and delivery compliance.

When appointed to the role of **Principal Designer**, BYTP will plan, manage, monitor and co-ordinate the health and safety in the pre-construction phase of a project, including identification, elimination or controlling foreseeable risks and ensuring that all designers carry out their duties. We will prepare and provide relevant information to other duty holders, provide relevant information to the Principal Contractor to help them plan, manage, monitor and co-ordinate health and safety during the construction phase.

When acting in the role of **Principal Designer**, BYTP will demonstrate behaviour in accordance with behavioural competencies to; act ethically and contribute to safe outcomes, demonstrate effective leadership, teamwork and communication as a member of a team, demonstrate commitment to strong safety culture, communicate effectively and collectively as part of a team, manage individual and organisational competencies, contribute to a learning culture, demonstrate responsibility and accountability for collective actions, and to understand and respect duty of care to co-workers, constructors, public, building occupants and end users.

# ORGANISATIONAL NOTE

## Bouygues Travaux Publics – Construction (Design and Management) Regulations 2015

When appointed to the role of **Principal Contractor**, BYTP will plan, manage, monitor and co-ordinate health and safety in the construction phase of a project, including, liaising with the Client and Principal Designer, preparing the Construction Phase Plan and organise co-operation between contractors and co-ordinating their work whilst ensuring that suitable site inductions and sufficient good quality welfare facilities are provided, that reasonable steps are taken to prevent unauthorised access and that workers are consulted and engaged in securing their health and safety.

When acting in the role of **Principal Contractor** and as a **Designer**, BYTP will be able to understand, in relation to the discharge of our duties, applicable legislation and how it is intended to regulate the design. This will include the management of any design undertaken by BYTP as **Designer** and will include when arranging or instructing others to carry out design activity, including when establishing specifications, bills of quantities and design calculations for any element of construction activity, building work, management, operation, use and demolition of buildings. BYTP understand the importance of health, safety and wellbeing for designers, specifiers, contractors, constructors and end-users. As a **Designer**, BYTP will liaise with other duty holders, to recognise the key differences between hazard identification and risk assessment and outline the basis to recognise risks and risk responses including the ability to manage risks by elimination or reduction within the design phase and to explain how residual risks are managed through pre-construction and construction phases of a project.

In addition, as **Principal Contractor** BYTP have defined a procurement process that maintains openness and transparency in decision making and assess proportionally the competence of contractors and suppliers by performing due diligence on the prequalification and selection of contractors, suppliers, and service providers, including establishing authenticity and integrity of information and record keeping. The procurement process demonstrates planning and organisation of projects and procurement of quality assured materials, products and systems suitable for their intended purpose and to assess safety implications during the construction phase and adopt a risk-based approach to managing project budgets and financial controls and to plan and co-ordinate construction work to allow time to deliver a safe and compliant project, including surroundings for end-users and stakeholders.

As a CDM competent organisation, BYTP can demonstrate they, and those undertaking work on any project are aware of their role and limitations, their legal and moral duties, inter-related construction phases, activities and systems and their impact on safe construction practices and public safety. We monitor our own competence levels and of those undertaking on and off-site construction activities and services including maintaining

accurate records and manage and supervise the quality of work and by adopting best practice.

We monitor the procurement of systems and coordinate the construction work of contractors, suppliers and service providers and oversee the inspection and testing of safety critical materials, components and building systems upon which the safety of persons in or around completed buildings depend and manage construction time and budgets without compromising the safety and compliance of constructors, end users or stakeholders.

BYTP are able to recognise the purpose of leadership, it's place in management and effects on personnel, as well as developing, maintaining and planning to manage and control change and assess the impact of change on the construction process including end-users and to analyse, appraise and integrate learning from experiences and best practice to improve the construction process and safety of constructors, end-users and stakeholders by using reliable and internationally recognised sources of industry information and standards within the decision making process.

As **Principal Contractor**, BYTP liaise with all stakeholders and regulatory bodies who may impact the construction planning, construction and handover phases on matters affecting the constructability, lifetime quality and safety of any building or asset and identify and respect the Client's needs and requirements whilst engendering a trusting, open, honest and collaborative relationship with the Client and their team.

BYTP are committed to work respectfully with other people and promote respect throughout the construction workforce. We have defined roles, responsibilities and targets for effective teamwork and established collaborative and shared objectives. We will identify the skills, knowledge, experience, and appropriate behaviours of those directly appointed by BYTP and have developed training plans to address gaps in competences in order that all within the construction workforce can make workplace decisions for which they are accountable and responsible and maintain an organisational safety culture.
