

Safety climate tool report

HS2

01 November 2024

Filter: Department=ALIGN JV, Supply chain working for ALIGN JV

Executive summary

This summary report contains results for the Safety Climate Survey carried out by HS2.

This study investigated safety culture across HS2. Expecting approx 7000 of the HS2 family people were invited to complete the survey and responses were obtained from 430 (Department=ALIGN JV, Supply chain working for ALIGN JV). See Appendix A for a summary of their details.

The Safety Climate Tool (SCT) measures the attitudes and perceptions of the workforce about health and safety. This report provides an understanding of safety culture by summarising the views and experiences of your employees. This will enable HS2 to focus on what really matters and make targeted improvements.

Main findings

This chart shows the overall scores for each of the eight factors in the SCT for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV). The scoring system indicates where responses were favourable (green), neutral (amber) or unfavourable (red). Negatively worded questions have their scores reversed, so that all questions are scored consistently, with favourable scores indicating a positive safety culture.

Summary of overall responses by factor for department=align jv, supply chain working for align jv

Summary of overall responses by factor for department=align jv, supply chain working for align jv

Factors with the most favourable responses were:

-  1: Organisational commitment - The company encourages suggestions on how to improve health and safety (83.5% agree/strongly agree)
-  1: Organisational commitment - There are good communications (e.g. toolbox talks/daily briefings) here about health and safety (83.2% agree/strongly agree)
-  8: Accident and near miss reporting - Accidents that happen here are always reported (79.5% agree/strongly agree)

Factors with the most unfavourable responses were:

-  2: Health and safety oriented behaviours - People who work here sometimes take risks at work which I would not take myself (31.3% agree/strongly agree)
-  4: Usability of procedures - Some health and safety processes and procedures do not reflect how the job is actually done (31.1% agree/strongly agree)
-  4: Usability of procedures - Some health and safety processes and procedures are not really practical (30.0% agree/strongly agree)

For advice on what to do with your findings, see the 'Next Steps' section at the end of this report.

Benchmarking

On the following 'factor' pages your mean SCT scores are presented with the SCT All Industry Benchmark data. This helps you to understand your organisation's performance compared to the results of other users of the SCT.

The SCT All Industry Benchmark dataset comprises data on all eight SCT Factors, gathered by 130 organisations. These organisations operate across a range of sectors, including manufacturing, construction, food and beverages, oil and gas and more. The data was gathered between 2013 and 2019.

1. Organisational Commitment

The Organisational commitment factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Organisational commitment are:

This chart shows favourable responses by role.

- The company encourages suggestions on how to improve health and safety (83.5% agree/strongly agree)
- Productivity/getting the job done is usually seen as more important than health and safety (26.6% agree/strongly agree)

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 1 score of 3.78 benchmarks at the **70th percentile**. This means that your score is greater than 70% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 1 score of 3.78 falls within the **average** range.

2. Health and safety oriented behaviours

The Health and safety oriented behaviours factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Health and safety oriented behaviours are:

- People who work here often take risks when they are at work (60.4% disagree/strongly disagree)
- People who work here sometimes take risks at work which I would not take myself (31.3% agree/strongly agree)

This chart shows favourable responses by role.

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 2 score of 3.39 benchmarks at the **45th percentile**. This means that your score is greater than 45% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 2 score of 3.39 falls within the **average** range.

3. Health and safety trust

The Health and safety trust factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Health and safety trust are:

This chart shows favourable responses by role.

- The company really cares about the health and safety of the people who work here (73.7% agree/strongly agree)
- Internal accident investigations are mainly used to identify who is to blame (29.7% agree/strongly agree)

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 3 score of 3.58 benchmarks at the **60th percentile**. This means that your score is greater than 60% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 3 score of 3.58 falls within the **average** range.

4. Usability of procedures

The Usability of procedures factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Usability of procedures are:

This chart shows favourable responses by role.

- Some jobs here are difficult to do safely (52.8% disagree/strongly disagree)
- Some health and safety processes and procedures do not reflect how the job is actually done (31.1% agree/strongly agree)

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 4 score of 3.24 benchmarks at the **70th percentile**. This means that your score is greater than 70% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 4 score of 3.24 falls within the **average** range.

5. Engagement in health and safety

The Engagement in health and safety factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Engagement in health and safety are:

- My Supervisor takes on board ideas on how to improve health and safety (77.9% agree/strongly agree)
- Supervisors devote sufficient effort to health and safety here (9.9% disagree/strongly disagree)

This chart shows favourable responses by role.

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 5 score of 3.86 benchmarks at the **95th percentile**. This means that your score is greater than 95% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 5 score of 3.86 falls within the **above average** range.

6. Peer group attitude

The Peer group attitude factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Peer group attitude are:

- All the people who work in my team are fully committed to health and safety (78.7% agree/strongly agree)
- I sometimes turn a blind eye to some less important health and safety processes and procedures (14.6% agree/strongly agree)

This chart shows favourable responses by role.

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 6 score of 3.81 benchmarks at the **80th percentile**. This means that your score is greater than 80% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 6 score of 3.81 falls within the **average** range.

7. Resources for health and safety

The Resources for health and safety factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Resources for health and safety are:

This chart shows favourable responses by role.

- The health and safety equipment (e.g. PPE, Plant, Tools, On site monitors) works well (78.0% agree/strongly agree)
- There are always enough people available to get the job done safely (12.4% disagree/strongly disagree)

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 7 score of 3.83 benchmarks at the **95th percentile**. This means that your score is greater than 95% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 7 score of 3.83 falls within the **above average** range.

8. Accident and near miss reporting

The Accident and near miss reporting factor is comprised of a number of statements. The findings for HS2 (Department=ALIGN JV, Supply chain working for ALIGN JV) are presented below.

Your most favourable and unfavourable aspects of Accident and near miss reporting are:

- Accidents that happen here are always reported (79.5% agree/strongly agree)
- Sometimes accidents are not reported (20.4% agree/strongly agree)

This chart shows favourable responses by role.

Your performance in context

The following chart shows your SCT score for this factor, compared with HSE's benchmarking data.

Compared to the HSE All Industry Comparison Group of 130 companies, your Factor 8 score of 3.71 benchmarks at the **90th percentile**. This means that your score is greater than 90% of the scores obtained by the 130 organisations in the Comparison Group.

Your Factor 8 score of 3.71 falls within the **above average** range.

Next steps

In order to get the most from your survey, we would advise you to explore the reasons underlying people's survey responses. HSE recommend discussions with the workforce (e.g. focus groups) to investigate the reasons behind their survey responses, and use this to inform the development of tailored action plans. Further information is available in Online Help (which can be accessed from your survey homepage).

Priorities for improvement based on the survey findings

When devising your action plan, start by focusing on the following key areas identified by the survey results:

Factors with the most unfavourable responses were:

-  2: Health and safety oriented behaviours - People who work here sometimes take risks at work which I would not take myself (31.3% agree/strongly agree)
-  4: Usability of procedures - Some health and safety processes and procedures do not reflect how the job is actually done (31.1% agree/strongly agree)
-  4: Usability of procedures - Some health and safety processes and procedures are not really practical (30.0% agree/strongly agree)

Factor	Suggestions
2. Health and safety oriented behaviours	■ Leaders should engage the workforce, by making safety personal (e.g. tailored communications, delivery of training courses in a relevant and accessible way, and the use of campaigns emphasising the potential impact that accidents can have on different aspects of workers lives). ■ Health and safety campaigns can cover a range of topics, and can be used to ensure that the effort devoted to health and safety is periodically refreshed. ■ Bespoke safety observation schemes (i.e. collecting examples of positive and negative behaviours on-site) can be supported by incentives to motivate involvement.

Factor	Suggestions
4. Usability of procedures	■ Efforts should be made to ensure that risk assessments and method statements are usable and relevant for all tasks, including where appropriate, the use of pictures and diagrams. ■ Focus on training to ensure systems and expectations of procedural compliance are clearly understood.

This summary report has been automatically produced by the HSE SCT software and provides an overview of the results. HSE recommend further exploration of the SCT charts for more detailed understanding.

Need more support?

Identifying areas for improvement is just the start of your safety culture improvement programme.

HSE specialists are available every step of the way to help you get the most from your survey results and guide your progress to improved health and safety performance.

We have one of the largest human factors teams in Europe and are uniquely placed to provide expert advice and consultancy based on our many years of research for the Health & Safety Executive (HSE) and using insights gleaned from many years working with industry.

Whether you just need some advice at the end of the phone, or full facilitation of a safety culture improvement programme, HSE has a consultancy package to meet your needs.

Our expertise includes:

- focus group facilitation
- leadership coaching
- procedure development
- competency development
- behaviour change
- employee engagement
- developing evidence-based solutions
