ACTION NOTES

16 July 2025

Attendees:

Coralie Peroux	ALIGNJV	CP
Ian Mackintosh	ALIGNJV	IM
Ismaila Aw	ALIGNJV	IA
Derek Van Rensburg	ALIGNJV	DVR
Florian Aubert	ALIGNJV	FA
Paul Attard	Bouygues	PA
Frederic Gilles	Bouygues	FG
Steve Hudson	SRM	SH
Matt Woods	VolkerWessels UK	MW
Chris Evans	VolkerFitzpatrick	CE

Apologies

Craig Peggie	SRM	CP
--------------	-----	----

Agreed actions & progress:

MONTHLY STRATEGIC INSIGHTS

- Within the month of August 2025, we have recorded 2 minor injuries. We have not had any Lost Time Incidents (LTI) or any further RIDDOR Recordable injuries. There were also no HIPOs during the period.
- We will be supporting a programme wide **HS2 Safe at Heart Step Up** event between 29th September to 10th October with engagement sessions at each work area. Our focus will include a filmed message from Mark Wild about “We are good, we can be great”, and schedule support from our ExCo Team to highlight each individual’s contribution toward our ongoing safety improvements and to reinforce our Productively Safe message to maintain focus and morale as key dates are achieved. James Gray from the HS2 Exec will join our South Heath Cutting event on 9th October 2025.
- With intense focus on HSPI linked activity, we have seen improvements in line with our strategy for continuous improvement. We have now successfully achieved the 2.3 target in two leading measure categories and others are progressing well.

STATUS UPDATE

The focus areas for **August 2025** have been:

Occupational Health Hub

- In line with HS2 Bridge Year / Transitioning Safely Plan one of our key focus areas is Health Matters as much as Safety. We have launched our Occupational Health Hub within the Hazard and Rehearsal Academy and held specific education sessions with our supervisory teams from across the project

Safety Performance Improvement Plan (SPIP)

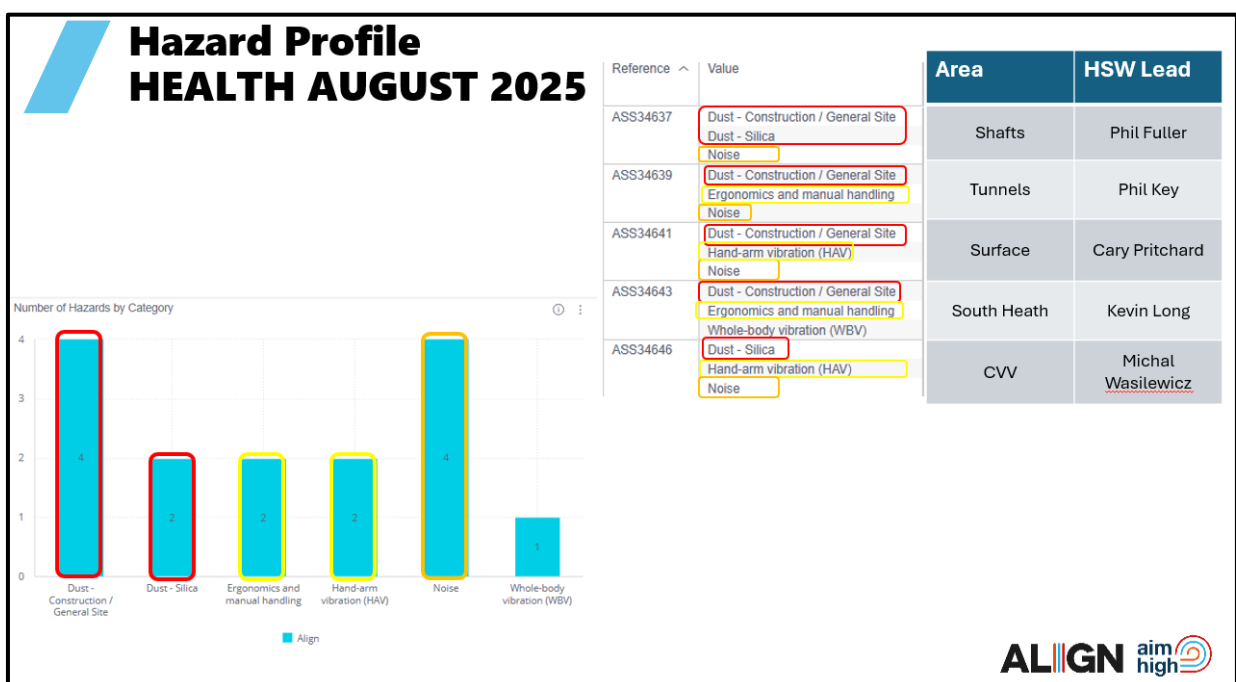

- In response to GC-2686, our Safety Performance Improvement Plan (SPIP) has been completed and signed off by the Client.
- We have launched a voluntary SPIP 1.2 in order to maintain momentum from the first plan, and to support the “Three Extraordinary Actions” set in our HS2 Transitioning Safely Pla. The actions will also support our HSPI performance improvements. The SPIP has 5 key topics, each of which has an ExCo Sponsor and set actions.
- Action progress is monitored via C1 SHWELT and ExCo OBEYA and progress in each area is satisfactory.

Occupational Health and Wellbeing (OHW)

- Our September OH initiative will be “Keep the Beat” focussed on heart health awareness.

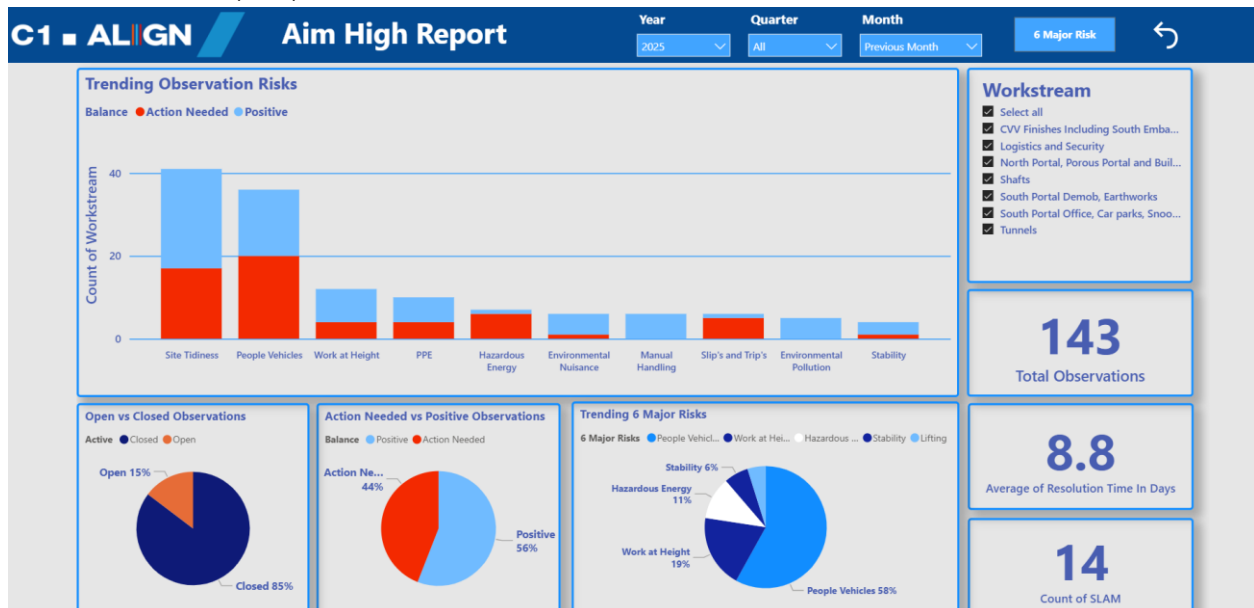

Occupational Health Hazard Profile

- The chart and table below show the outputs from our current Health Hazard Profile and the specific hazards in each area. This output from the Hazard Profiles gives us the focus for our monitoring and assurance activity in each area over the following period. This is considered as “effective use of hazard profiles” within HSPI criteria.

Aim High Observations

- A point-in time sample of our Aim High data ([Aim High Live Report](#)) is shown below, which on this occasion is filtered to show our data for August 2025.
- In a shift from previous periods, we see a higher proportion of positive reports (56%) than we see action needed observations (44%).

- Data shows reporting of site tidiness, and people vehicle interface as our top areas for both improvement and when receiving positive observations. Lifting is no longer featured in our top 10 focus areas.
- When focussed on our 6 Major Risks the data shows 58% focus on People Vehicle Interface, and 19% related to Work at Height.
- Other areas identified via SHWELT for increased focus are worsening PPE compliance, and also concerns linked to our on-site buried temporary utilities which are represented within our Hazardous Energy categories.

HSW STATISTICS

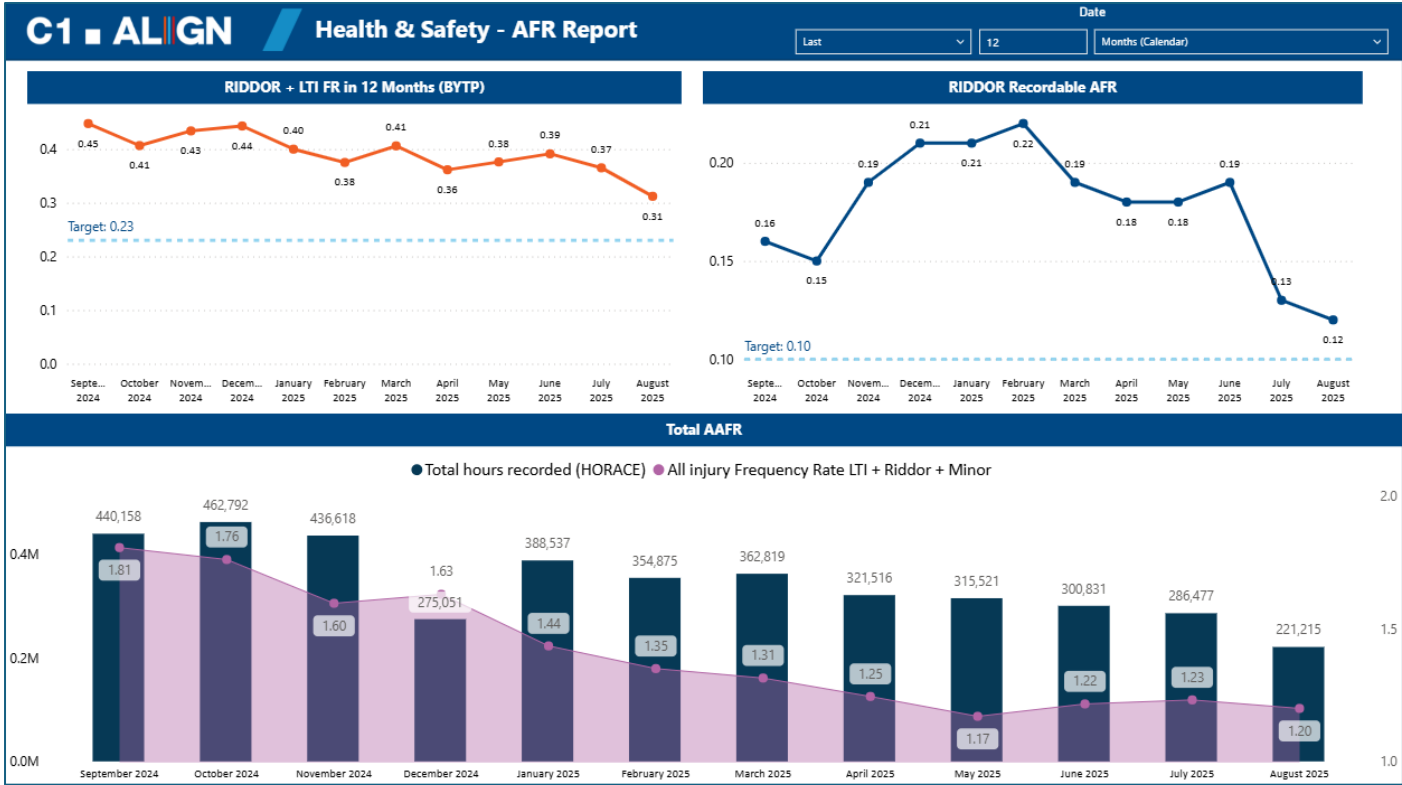

To the end of August 2025, ALIGN has completed **27,456,923** hours in total including **4,166,410** hours in the last 12 months. We have recorded **221,215 hours worked** on active worksites during August 2025 representing an approximate FTE of **1,090** personnel. Normalised reduction in personnel is skewed during August due to the prevalence of annual leave.

In the August period, we recorded only two minor injuries. One hand injury resulting from a slip and fall, and the other a minor neck injury resulting from a snagged chain and then a released lifting hook which struck the Slinger.

Our **RIDDOR AFR** has decreased further to **0.12** demonstrating our ongoing improved performance in 2025. The RIDDOR + LTI frequency rate (**LTIFR**) has decreased significantly to **0.31** indicating a reduction in the severity of injuries. Our All-Accident Frequency Rate (**AAFR**) has decreased to a rate of **1.20** and remains significantly improved compared to 12 months ago.

The overall project AFR figure for RIDDOR injuries is **0.12 AFR** which is measured over the **27.50 million worked hours** recorded by Align JV. This represents one RIDDOR injury in each 833,000 hours worked ($0.1 \text{ AFR} = \text{one in a million}$). In terms of severity, 13 of our RIDDOR incidents were the more severe *specified injuries* and 21 resulted in *lost time of more than 7 days*.

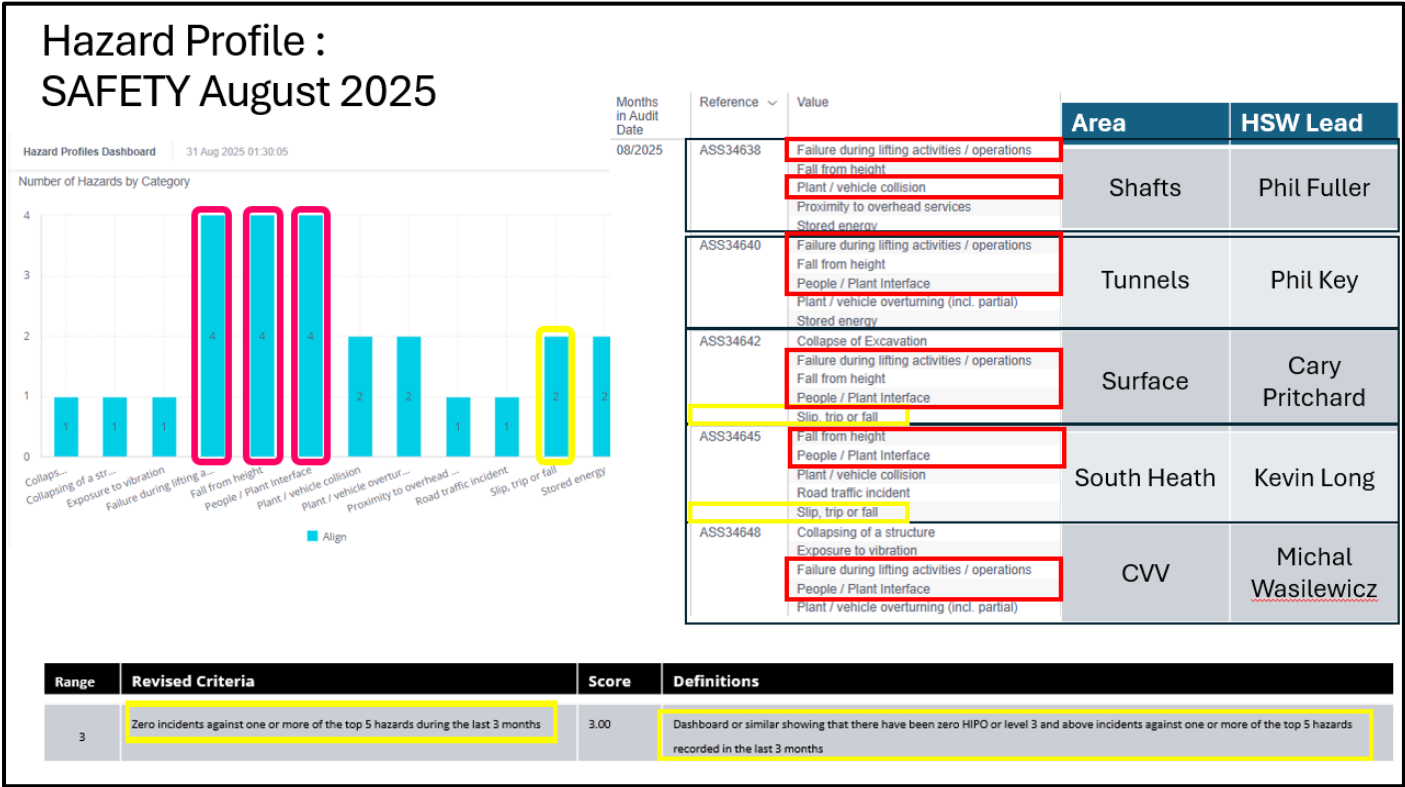

In terms of the severe RIDDOR injuries, and the total number of > 1-day Lost Time injuries, our project total count is 99. That calculates to one Lost Time Incident in each 278,000 hours worked.

[Link to Power BI data report](#)

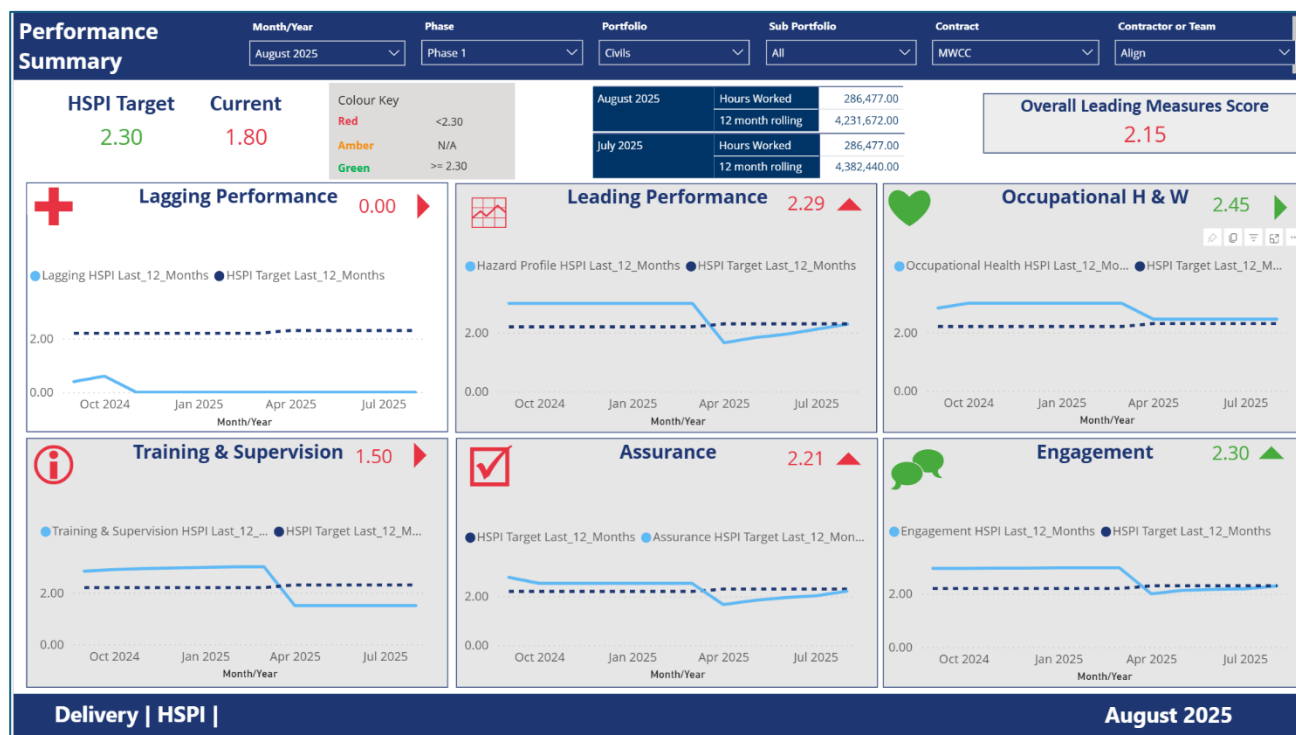

Safety Hazard Profile

In line with 2025/2026 HSPI requirements, our Hazard Profile should be escalated to JVB level to increase visibility. We have agreed five Align work areas deemed subject to profiling with HS2. The below data captured from the HS2 HORACE system shows the current top hazards measured across Align which will be subject to increased monitoring and audit focus. From the below collated profile data for the Align activities, you will note the correlation with our ongoing focus Six Major Risks.

HEALTH AND SAFETY PERFORMANCE INDICATORS (HSPI)

The HSPI evidence submitted for August 2025 has given a further steady increase in performance in the leading measures, although the IWI **Lagging** measure remains at zero. We have now hit target in two of the five leading measures, and we are close to target in two of the others.

We saw gains in all leading measures other than **Training and Supervision**, for which we have now developed an online OH training platform that will launch in September t and will achieve improvements.

It is important to understand that a number of the leading measure outcomes are averaged over the financial year, and therefore the lower scores in Q1 & Q2 will continue to affect the score. Achieving the targeted 2.3 is a considerable challenge given the stretch targets and averaged calculations.

The Occupational Health & Wellbeing (OHW) measure is calculated on a quarterly basis (Q1 April-June) and our inaugural achievement in this respect has immediately exceeded the 2.30 target. The indicative arrow for the OHW measure indicates our current performance being lower than the previously achieved 3.00 in March 2025.

The Lagging Incident Weighted (IWI) Index outcome remains as a rolling 12-month calculation (01/09/2024 – 31/08/2025). The new IWI measure includes a penalty for meeting the HS2 strategy to increase the number of Occupational Health exposures which seems counter-productive but applies across the programme. To give context, if the Align JV current injury figures are input into previous (2024/2025) HSPI, the current IWI would show an improvement from zero to **0.60**.

During August 2025, HS2 has issued the below guiding principles for their 2025/2026 HSPIs.

- HS2 HSPI's are designed to be challenging to help raise the bar across the programme
- The target score of 2.3 is an end-of-year goal—not a monthly minimum
- We recognise that some criteria will take time to implement and embed
- Strong performance is shown through steady month-on-month improvement

Align JV HSPI Progress April 2025 – April 2026

Period	Lagging	Leading Measures						Overall HSPI
	IWI	Leading	Occ H&W	Train / Supervision	Assurance	Engagement	Overall Leading	
August 2025	0.00	2.29	2.45	1.50	2.21	2.30	2.15	1.80
