

“TOP SITE” Label Rules

1. The «TopSite» process

Beyond the respect of regulations and norms, BYTP wishes to implement actions throughout the duration of its projects to promote innovation and best practices in regard to the following topics:

- Health and Safety
- Environmental protection
- Social
- Societal
- Quality and client satisfaction

Throughout the duration of the project, collaborators mobilize themselves to integrate these different dimensions into their activity, a commitment marked by the acquisition of the Top Site label.

The label is targeted at projects with a timeline of a minimum of 6 months and generating more than 3 M€ in revenues.

2. Criteria for awarding the label

The TopSite label is determined through an evaluation grid established for each of the five topics. These grids identify criteria allowing the evaluation of the project's performance:

For Health & safety, these criteria are of 3 kinds:

- "Qualifying": mandatory criteria for the label award, validated by the P2S auditor
- "Flag": criteria leading to raise or to lower the TopSite flag
- "Bonus innovation / best practices": criteria present within each topic

The label is obtained for Health & Safety only if:

- All qualifying criteria are achieved
- At least 2 innovation/best practices are observed

The label can be awarded and the TopSite flag immediately raised at the date of the audit, only if :

1. No fatal accident (excluding commuting) occurred within 36 months prior to the audit [BY personnel & temporary personnel & subcontractors]
2. No severe injuries (excluding commuting) occurred within 12 months prior to the audit [BY personnel & temporary personnel & subcontractors]
3. No LTI (excluding commuting) occurred within 2 months prior to the audit [BY personnel]
4. No HIPO injuries (excluding commuting) occurred within 2 months prior to the audit [BY personnel & temporary personnel & subcontractors]
5. No significant and valid "negative image" is published externally to the project within 2 months prior to the audit

If, at the date of the audit, an event amongst 2/3/4/5 occurred within the period mentioned, thus the label can be awarded, but the TopSite flag cannot be raised before the end of the said period (12/2/2/2 months)

For a fatal event (case 1), a new audit shall be conducted at the end of the 36 months suspension period to allow the flag to be raised.

3. TOP SITE INNOVATION

In case 5 bonus or best practices are validated (at least 1 per topic), the project obtains the label "TOP SITE INNOVATION"

4. "TOP SITE" assessment

4.1 Initial award

Several representatives of BYTP headquarter QE and P2S organize a site visit on a jointly agreed date and around the 20% progress mark. This visit can be combined with a QE and H&S internal audit.

The assessment includes a verification of the compliance with the BYCN 12 Safety Basics :

- 1 non-conformity on a "disqualifying" criteria does not allow the label to be awarded.
- In case of non-conformity on a non-disqualifying criteria, the label award cannot be obtained at the end of the evaluation. Nevertheless, the project has the opportunity to be labelled, within a month, in case evidences are provided to the P2S auditor that the non-conformities have been closed-out
- Sensitive points can be raised during the assessment. They do not block the label obtention, but the project commits to engage actions to close-out these sensitive points

Once the assessments of all topics have been completed, the BYTP QE department collect the results and informs the project about the decision taken regarding its TopSite award. The project management sends the assessment report to his Client and validates that the Client agrees to award the project.

4.2 Communication

After validation by the Client, the project management organizes an event for "raising the flag". Flags and masts are ordered by the project. They are installed, if possible, at the entrance of the site.

For the "flag raising" event, the following persons are invited:

- All project personnel (workforce, supervision, management), including subcontractors,
- The Director of the concerned operational unit, or his representative,
- The Client or his representatives,
- Any person the project considers an opportunity to be invited (local bodies, suppliers...etc)

4.3 Label suspension

The label can be suspended during the project life as per the following rules:

- in case of a fatal accident (excluding commuting) [BY personnel & temporary personnel & subcontractors]:
 - o Permanent suspension for projects <3 years
 - o 36 months suspension for projects >3 years or for permanent installations. A new assessment, after the suspension period, is mandatory to obtain the label
- 12 months suspension in case of a severe injury (excluding commuting) [BY personnel & temporary personnel & subcontractors]
- 2 months suspension in case of
 - o LTI [BY personnel]
 - o HiPo injury [BY personnel & temporary personnel & subcontractors]
- 2 months suspension in case of "negative image" published externally
- 6 months suspension in case of presence of an illegal worker, forced or child labors
- 2 months suspension in case of major environmental incident or the occurrence of a critical emergency situation
- 2 months in case of occurrence of a priority concern relating to quality control or client satisfaction

Durant the entire duration of the suspension, the TopSite flag must be lowered.

4.4 Label validity and renewal

The TopSite label is valid 2 years starting from its awarded date.

At Project decision, a renewal assessment can be planed before the label expiry date. The renewal decision is taken following the same process than the initial assessment (except that the best practices and innovations shall be different than the original ones).
