1. Objective

The objective of this procedure is to define the:

- Classification of health and safety events (type of event, severity, link with major risks, etc.)
- Notification of events within BYTP
- Administrative declaration of events to the authorities and third parties
- Process for investigation and review by management, depending on the type of event
- Lesson learned management

This procedure does not deal with the following subjects:

- **BYTP H&S reporting (BYTP-H&S-PRO-2093)**
- **Standard Emergency Management (BYTP-H&S-REF-2221)**
- HR / medical monitoring linked to a health and safety event (HR responsibilities)

2. Scope

This procedure applies to all BYTP sites, projects and worksites.

In the case of projects where BYTP is in a consortium (JV), undeclared partnership or is a co-contractor, the specific procedure for the project will include at least the provisions described in this document, as well as the non-contradictory provisions of our partners. It should be adopted at the start of projects during health and safety launches.

The implementation of this procedure involves the collection, recording, processing or storage of sensitive personal data within the meaning of the GDPR. Each subsidiary/entity/project ensures that this procedure is implemented in compliance with the applicable local regulations in this area.

3. Reference documents

- **Health and Safety Manual (BYTP-H&S-REF-2201)**
- Social, Environmental and Societal Reporting Protocol of the Bouygues Group
- Health & Safety Reporting Guide for Bouygues Construction

4. Definitions and abbreviations

- BYTP Bouygues Travaux Publics
- BYCN Bouygues Construction
- CORITY Software for recording health and safety events
- HiPo High Potential
- FIFO Fly In Fly Out
- H&S Health & Safety
- GDPR General Data Protection Regulation

Definitions of the populations and types of events concerned by this procedure are available in the document **Populations-events definitions (BYTP-H&S-INF-2084)**, which specifies in particular:

- The different types of populations (A1 BY, A1 NO BY, etc.)
- The different types of events: occupational injuries, commuting accidents, near misses, etc.)
- The different classifications associated with these events (Lost Time Injuries, restricted duties, first aid cases, etc.)
- The different levels of severity of an event

5. Roles and responsibilities

5.1. BYTP Division

- Ensures that the debriefing meetings and monthly reviews of severe and HiPo events are carried out on all projects within their scope
- Takes part in/conducts debriefing meetings for severe events (including fatal)

5.2. Project area authority

- Determines the classification of an event (Severe / HiPo) with the Project (or subsidiary / entity) H&S Manager and in particular the significant nature of a HiPo event
- Appoints, participates in and/or is responsible for investigations, depending on the type of event
- Approves the investigation report and the closure of the event
- Ensures that debriefings are organised for all severe events (including fatal ones) and for any significant HiPo
- Ensures that dedicated meetings or monthly reviews are organised to review other HiPos from the previous period

5.3. Health & Safety Department

- Receives and cascades event notifications to the BYCN H&S Department and operational department
- Appoints and/or participates in the appointment of investigation teams
- Takes part in and/or leads investigations into severe (including fatal) events
- Approves in-depth investigation reports on severe (including fatal) events
- Takes part in debriefing meetings for severe and significant HiPo events

5.4. Subsidiary / entity H&S Manager

- Carries out the required event notifications according to the type of event with the assistance of the Project H&S Manager
- Takes part in and/or leads Level B investigations, approves in-depth investigation reports for events classified as "HiPo injuries"

- Ensures that an organisation is defined within the subsidiary/entity to guarantee exhaustive control of the information recorded into the reporting software.
- Takes part in debriefing meetings for HiPo injuries

5.5. Project H&S Manager

- Alerts and communicates information in due time as required by the type of event
- Participates in classifying the event (severe / HiPo / significant HiPo) in agreement with the area authority
- Ensures that all events are recorded in CORITY within the set deadlines
- Ensure classification, follow-up, updating of all events within its scope (including in CORITY)
- Appoints, participates in and/or is responsible for investigations, depending on the type of event

5.6. H&S Reporting team

- Assists the H&S teams (understanding definitions, entering data into CORITY, training in the use of tools, etc.)
- For employees with a France contract (direct employees or temporary staff): draws up Work Accident Declarations (and any associated reservations), ensures that they are forwarded to the authorities and to third parties, and archives all communications to/from the authorities
- Ensures quality control (by sampling) of the data recorded into the reporting software.
- Translates/distributes/makes available/archives Severe and HiPo event safety flashes

5.7. Human resources Department

- Provide all necessary information to the H&S representatives for the event follow-up (medical certificates, back-to-work certificates, departure from the company, etc.)
- Ensures HR/medical management of any injured employee in compliance with applicable regulations

5.8. All employees

- Reports any events observed to their line manager, the H&S representative or a first aider (apply the STOP procedure if necessary)
- Takes part in investigations if required

6. Classification of events

The various events reported at BYTP level are categorized in compliance with the following documents:

- **Populations - events definitions (BYTP-H&S-INF-2084)**
- **Social, Environmental and Societal Reporting Protocol of the Bouygues Group**
- **Health & Safety Reporting Guide for Bouygues Construction**

Some key elements are presented below.

6.1. Major Risks

6 major risks have been identified for BYTP:

Risks related to mechanical lifting and handling

Risks of collision related to the presence of vehicles and pedestrians

Risks related to work at a height

Risks related to stability of works and storages

Risks related to powered production equipment

Risks related to hazardous energies

For each event, the applicable major risk is identified. If the event is not associated with a major risk, the Major Risk is defined as not applicable.

This information is reported in CORITY (dedicated field).

6.2. Severity of an event

Health and Safety events are classified according to their level of severity.

The following are classified as a Severe accident:

- Fatalities
- Occupational injuries resulting in irreversible impacts: permanent physical incapacity and/or disability (e.g. functional loss of a sense, loss or paralysis of a limb, loss or dysfunction of an organ)
- Occupational injuries with any of the following consequences, even if reversible:
 - Serious burns requiring surgery or a skin graft
 - Victim in a coma, and/or requiring life-saving emergency treatment, or placed in an intensive care unit
 - Fracture / Internal haemorrhage / Organ injury / Poisoning, requiring inpatient hospitalisation for more than 48hrs continuously: the 48hrs period runs from the moment when the medical profession defines that the care requires hospital accommodation

For all events not falling into the severe category listed above:

- **The following are classified as HiPo:**

- Any event relating to a major risk, except in the case of exhaustively defined exceptions. These exceptions are listed in the document **Exhaustive list of exclusions by major risk (BYTP-H&S-INF-2113)**
- Any event not associated with one of the 6 Major Risks if it is assessed that severe consequences could have occurred

A HiPo is said to be **significant** if the event (whether or not associated with a Major Risk):

- Could almost certainly have led to a fatal accident or multiple severe injuries

OR

- Is likely to generate immediate media coverage

(Classification as "significant" is at the discretion of the area authority)

- **The following are classified as "Not applicable":** All other events

This information is entered into CORITY (fields dedicated to the severity of the event + exclusion of BYCN Major Risks).

6.3. Occupational Injuries

An occupational injury is any sudden and unexpected event that causes physical or psychological injury to an employee as a result of or in the course of his or her work at the workplace, at home (remote working), at a third-party location (nomadic working) or on a business trip, whatever the cause.

A distinction is made between:

- Fatalities (FAT): occupational injury which result in death, regardless of how long after the accident the death occurs.
- Lost Time Injuries (LTI): any occupational injury suffered by an employee resulting in absence at work for at least 1 day, with the employee not returning to work when the next normally scheduled shift starts (very often the following day).

The number of lost Days (LD) associated with the accident is the number of calendar days during which the victim of an occupational injury was unable to work.

The day of the accident is not included in the count, so the calculation of the number of days of stoppage starts the day after the day of the accident (unless the consultation is carried out at a later date).

- Restricted work cases (RWC): An occupational injury in which the victim returns to work on the dates and at the times scheduled, but in a reduced, modified or different activity.

Restricted duties can be prescribed directly by the doctor during the consultation.

If this is not the case (prescription of days off), then the conditions required to set up restricted duties are:

- Restricted duties are accepted in writing by the employee

AND

- Restricted duties are compatible with the employee's state of health and are approved in writing by a doctor (occupational physician or doctor issuing the medical prescription)

Depending on the applicable regulations, it may be necessary to inform staff representative bodies of the introduction of restricted duties.

- Medical Treatment cases (MTC): occupational injury in which the victim goes to see an external doctor or other medical body, then returns to work on the date and at the time scheduled for his/her normal activity.
- First aid cases (FAC): occupational injuries for which the victim receives initial treatment in his/her workplace, without outside consultation, and returns to his/her usual work.

6.4. Occupational Illness

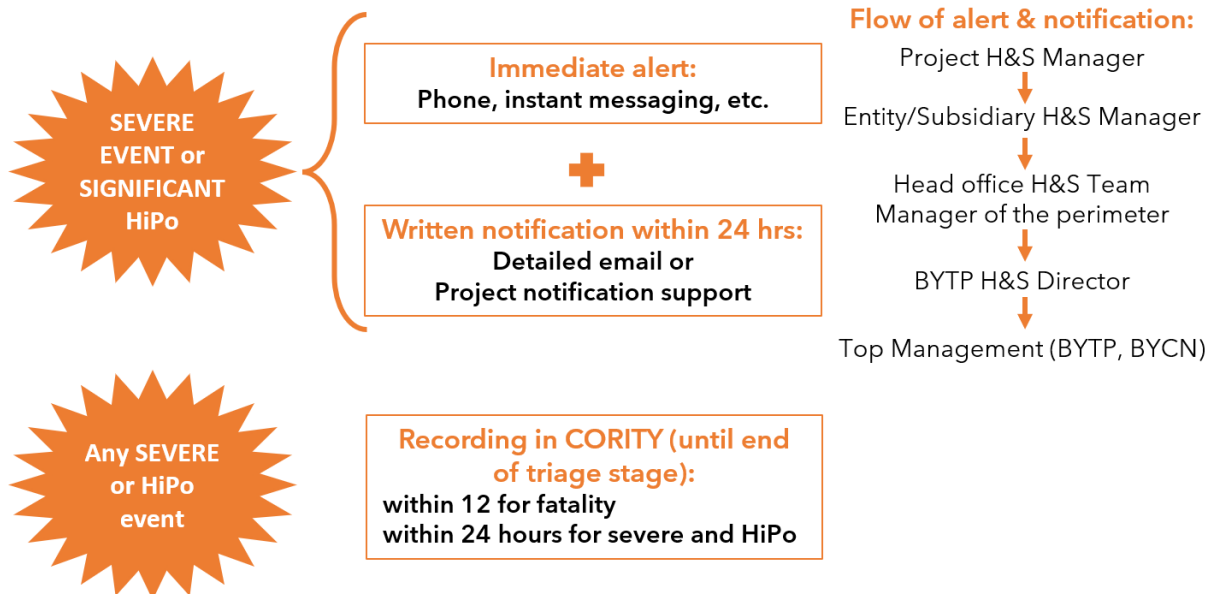

An occupational illness is an illness recognized as resulting from exposure during professional activity to conditions or substances which are harmful to health.

An occupational illness can be classified as Fatal, With Lost Time (in this case, the calculation for Lost Days due to occupational illness follows the same rules as occupational injury), Without Lost time.

7. Alert and written notification of events

7.1. Severe / HiPo events

All severe and HiPo events are notified following this process:

The written notification includes at least:

- Date & time of event
- Activity sector (BYTP) / Perimeter - entity
- Project name / client
- Location of event
- Type of event: Fatal accident, Lost Time Injury, Near-miss, material damage,
- Classification: "Fatality", "Severe" or "Significant HiPo"
- In case of personnel injury:
 - Name, age and nationality of the injured person(s) (according to known information)
 - Type of population: BYTP personnel, temporary worker, subcontractor (+name), JV partner (+ name), etc.
 - Consequences (known or anticipated) for the victim(s)
- Event description
- Immediate actions taken / planned actions
- Any other information for a good understanding of the event / situation

Notes:

- In case of absence or if the alert / notification is not acknowledged, alert the upper level
- Alerting and reporting at the level of operational departments is to be defined by these Departments.
- Depending on the applicable regulations, it may be necessary to inform staff representative bodies for severe or HiPo events.

7.2. Other events

These other events are not subject to any specific written alert or notification, except where the project identifies a potential criticality associated with the event.

The project, via the H&S team, will ensure that the data is recorded in the internal CORITY software **at least until the end of the triage stage** within 7 calendar days.

(specific deadlines are set up for activities in France => please refer to the French version of this document).

8. Administrative declarations of events to local authorities or a third party

Accidents and their consequences are covered by the companies to which the victims belong (BYTP for staff with a BYTP contract).

Each project ensures that the declarations to local authorities or third parties are made in accordance with the applicable legislation for all events concerned.

8.1. Work accident declaration (France & expatriates with a French contract)

Refers to the French version of this document.

8.2. Work accident declaration (outside France)

For all employees with a "MAINBY" contract or a "Global Local Contract" with HENNER affiliation (French employees with a local contract abroad): the declarations are made by the subsidiary / project in accordance with the regulations applicable in the country.

At the same time, human resources representative informs the MAINBY manager in charge of the country where the event occurred.

For other employees: the declarations are made by the subsidiary / entity / project in accordance with the regulations applicable in the country.

9. Analysis of events

Following an event, systematic analysis is carried out. The paragraphs below describe how this analysis has to be carried out.

9.1. Investigation levels

Two investigation levels are defined according to the real or potential severity of the event:

- Level A: event requiring an investigation,
- Level B: event requiring an in-depth investigation

The investigation level for an event is established by taking into consideration the worst-case scenario between the real consequences and the potential consequences of the event.

The project Manager, together with the H&S Manager (project or entity / subsidiary) and, where appropriate, in coordination with the operational and H&S departments, determines the investigation level.

At the very least, any severe or HiPo event, whether or not associated with a major risk, is the subject of an in-depth investigation (level B).

9.2. Investigation team

The person in charge of the investigation, and the members of his or her team, are defined according to the investigation level of the event.

	INVESTIGATION LEAD	INVESTIGATION TEAM (MINIMUM)
Level A	Defined by the Project and H&S Manager	Defined by the project
Level B	Defined jointly by the Head Office Operational Department and the H&S Department (for severe and significant HiPo) Defined by Project Director and Project's H&S Managers (for other HiPos)	- Project or entity manager - Project / perimeter H&S manager - Accident victim's line manager - Subsidiary's H&S manager (if required) - BYTP's H&S Director (or delegate) (if required) - Knowledgeable individuals / Experts (if required) - Any participant required by law

If applicable:

- The customer or their representative may be part of the investigation team
- The project defines specific measures for accidents involving temporary staff, co-contractors or sub-contractors (e.g. BYTP review of a report provided by the co-contractor / subcontractor, or joint BYTP-subcontractor investigation team for accidents associated with co-activity, Severe or HiPo review with the Temporary Employment Agencies, etc.).

9.3. Investigation process

For all level A investigations, the process is determined by the project.

For all level B investigations, the full and detailed investigation includes:

- Interviews with the accident victim(s) if possible
- Finding and collecting the facts
- Inspection of the event location
- Collecting and recording material evidence
- Identification and interview of witness(es), key personnel identified
- Examination of documents, procedures and records
- Resolving any conflicts and contradictions

- Identifying and finding any missing information
- Identification of direct and root causes (using a structured method such as a cause tree, TOPSET, TAPROOT, ICAM, etc. chosen by the person in charge of the investigation or the H&S Department)
- Identification of the action plan associated with the various causes identified

The investigation remains objective and factual. Team members avoid making any value judgements and judgements about individuals. The various line managers cooperate with the investigation team by releasing employees for the purposes of the investigation.

9.4. Investigation report

A full report of the event is issued by the investigation team.

For level A investigations, the project ensures internal distribution in line with applicable requirements (client, local regulation, etc.).

For level B investigations, the project distributes the investigation report in accordance with a pre-established distribution list which includes at least:

- The Project director / manager
- The Head Office Operational Department
- The H&S Department
- Third parties as required by regulation / client: Social and Economic Committee, competent authorities, etc.

9.5. Investigation results traceability in the Reporting software (CORITY)

For all level B investigations, the key information from the investigation are reported in CORITY:

- The cause analysis is recorded (either through the Cority fields of the "Cause analysis" tab or via an uploaded document)
- Root causes are recorded in dedicated Cority fields of the "Cause analysis" tab
- Corrective actions are recorded (in Cority fields of the "findings and investigation" tab or via an uploaded document)
- One or more documents are uploaded to ease the understanding of the event circumstances (at least the investigation report, photos, method statement, safety flash, etc.)

When all of these elements are entered in CORITY and validated (excluding validation by the "health and safety approver"), the CORITY status must be changed to "investigation done". This should be completed within 3 weeks (from the date of the event) except in justified circumstances.

Final validation by a "health and safety approver" can then take place in CORITY according to the following process:

- Final approval by a P2S Department representative:
 - By the BYTP H&S Director for fatalities

- By the Head Office H&S manager of the perimeter for severe accidents (excluding fatalities)
- Final approval by Subsidiary / entity H&S Manager or the line manager of the project H&S Manager for other situations for HiPo injuries (all HiPo events resulting in a lost time injuries, restricted work cases or medical treatment cases excluding first aid cases)

10. Management review of events

10.1. Fatality

In the event of a fatality, or when requested by the BYTP H&S Department and/or BYCN and/or BYTP Senior Management, the Director of the entity concerned holds a debriefing meeting.

During this debriefing, it is determined whether:

- The investigation is complete and the corrective actions defined are appropriate and sufficient
- Lesson learned has been identified to be shared with all the entities and employees concerned

10.2. Severe and significant HiPo event

For severe or significant HiPo event, the project manager, with the support of the investigation team, organises a debriefing meeting with the participation of the project's operational Department and the H&S Department (project & head office).

The review focuses on several aspects in order to ensure / verify:

- The relevance of the facts collected and the event analysis
- Alignment with the defined causes, including causes associated with the lines of defence & BYTP safety culture
- Alignment with the corrective and preventive actions
- Review and approval of the associated safety flash

10.3. Monthly review

A monthly review is organised at project and/or perimeter level by the project/perimeter manager to:

- Review Severe and HiPo events over the past period
- Identify trends, considering:
 - Activities involved
 - Major associated risks
 - Recurring causes
- Define actions and initiatives at project / perimeter level to improve performance
- Propose actions to operational and/or support Departments at their level (e.g. incorporating a requirement into a H&S standard, etc.).

11. Lesson learned

For severe and significant HiPo events, the Project H&S Manager or the subsidiary / entity H&S Manager prepares, in coordination with the Head Office H&S team, a "safety flash" in accordance with the template **Safety flash (BYTP-H&S-FOR-2163)** (or in accordance with the project template providing that this template includes the breaches identified regarding the barriers of defence and the management of unexpected event if applicable).

The Project H&S Manager or the subsidiary / entity H&S Manager circulates the flash within his perimeter and to the H&S Reporting team.

BYTP's H&S Reporting team is responsible for distributing and storing "safety flashes" at BYTP level.

All flashes can be accessed via the [H&S intranet](#) (database of H&S communications). They enable each project / entity / subsidiary to share with all employees a summary analysis of an event (facts, causes, recommendations) in order to avoid the same type of event occurring on other projects.

12. Follow-up of events

12.1. Follow-up of action plan

The follow-up of corrective actions defined in the investigation report is managed by the project according to the deadlines set.

The investigator (or a representative of the H&S Department) enters the progress of the action plan in CORITY, in the findings and actions tab, until all the actions associated with the event have been completed.

12.2. Follow-up of developments (lost days, back-to-work, dismissed, administrative follow-up, etc.)

Each project / entity / subsidiary updates CORITY with information on the events within its scope, in particular:

- Number of lost days, back-to work and associated medical certificates (initial medical certificate, extensions, back-to-work certificate as required by applicable regulations)
- Follow-up of restricted work cases (handwritten letter, information from the referenced doctor)
- Integration of all documents required for the event.
Information / letter received from local authorities (recognition as an occupational injury, event rejected, etc.).

13. Support of the H&S reporting team

Each project/Operational Department is responsible for the quality / reliability / completeness of the data entered into CORITY.

The H&S reporting team:

- Provides operating procedures for the use of CORITY. These documents are available and can be consulted on the H&S Intranet. ([link to operating procedures](#))
- Assists users on request (technical problem, difficulty for recording an event, training need, etc.)
- Ensures that all the required information is entered into CORITY via random checks.

14. Archiving

14.1. Level A investigation

Electronic versions of Level A investigation reports are kept by the Project H&S Manager or the Subsidiary H&S Manager at least until the end of the project, or a later date if legal action is in progress (via CORITY or by any means defined by the project).

14.2. Level B investigation

Level B investigation reports are archived in CORITY or in a dedicated folder when the reports are confidential and cannot be archived in CORITY. Electronic versions of these reports are kept by the H&S Department for at least 10 years.

15. List of appendices

- Populations - events definitions (BYTP-H&S-INF-2084)
- Exhaustive list of exclusions by major risk (BYTP-H&S-INF-2113).
- Safety flash (BYTP-H&S-FOR-2163)
