1. Objective

This procedure aims to define the responsibilities and the process for collecting the necessary data for the preparation of various Health and Safety reports.

2. Scope

This procedure applies to all BYTP sites, projects, and construction sites, including projects where BYTP is part of a joint venture (JV), temporary joint venture (SEP), or is a co-contractor.

3. Reference documents

- **Social, Environmental and Societal Reporting Protocol of the Bouygues Group**
- **Health & Safety Reporting Guide for Bouygues Construction**
- **Management of Health & Safety events (BYTP-PRO-H&S-2082)**
- **Definitions - Populations-events (BYTP-INF-H&S-2084)**

4. Definitions and abbreviations

BYTP	Bouygues travaux Publics
BYCN	Bouygues Construction
HR	Human Resources
(O) H&S	(Occupational) Health & Safety

5. Roles and responsibilities

5.1. Project Management

The management of each project (including projects in joint venture (JV), temporary joint venture (SEP), or as co-contractor.) establishes an organisation that meets the reporting requirements of this document and allocates the necessary resources.

5.2. Human Resources Department

The Human Resources Department of each subsidiary / entity / project consolidates the worked hours (real or theoretical) at least for A1 BY, A2 BY and B BY staff.

5.3. H&S Reporting Team

The H&S Reporting team:

- Provides the H&S representatives with the tools and forms necessary for data collection
- Assists / trains the H&S representatives in understanding the data collection processes, using reporting tools, data consolidation rules, etc.
- Verifies the consistency of data by comparing them with other information sources and ensures quality control of the data by sampling (using control tools, checklists, or dashboards).
- Communicates updates within the department (e.g., tool/form updates, changes in reporting protocol, points of attention, etc.)

5.4. Subsidiary / entity / project Health & Safety Manager

The subsidiary / entity / project Health & Safety Manager

- Ensure the H&S reporting team is informed of any new worksite
- Define the organization for data entry / validation required in the H&S reporting tools according to the scheduled deadlines.
- Ensure the compliance and reliability of the data collected within their scope.

5.5. Health & Safety representatives

Each H&S representative is responsible for collecting, verifying, and consolidating the data required for reporting, according to their assigned role and in compliance with the applicable rules.

6. Creation of Worksites in the reporting tools

The first step to ensure the collection of necessary information for health and safety reporting is the creation of each worksite.

Each subsidiary / entity must establish a process to communicate the opening of a new worksite to the H&S reporting team (e-mail or any process of automatic transmission). This may include an information email, automated transmission of Site Opening Forms, etc.

The information provided should include at least:

- The grouping code(s) / cost center(s) (available from the finance teams).
- The project name.
- The location (Country - city [optional]).
- Project governance / composition and percentage within the consortium, if applicable.
- Person(s) responsible for entering/validating the worked hours of this worksite.

The H&S reporting team ensures the creation of the worksite in the "Worked Hours" application upon receipt of the information. 24 hours after its creation, the worksite is available in the other collection tools mentioned in the following sections.

7. Collection of Health and Safety Events

All Health and Safety events (accidents, occupational illnesses, material damage, near-misses) and the associated information (tracking of lost workdays, classification of severity/HiPo, local authority classification, etc.) are reported to the H&S department via a software deployed across all BYCN activity sites: **CORITY**.

This CORITY software must be used on all BYTP activity sites, even if the client and/or partner has other methods for transmitting or recording this information.

Each worksite must designate individuals responsible for entering data into CORITY, ensuring the quality of the information provided and adhering to the recording deadlines as defined in the **Management of Health & Safety events (BYTP-H&S-PRO-2082)**.

8. Collection of the worked hours

All monthly worked hours per worksites must be reported to the HR/H&S Departments via a software deployed across all BYCN projects: **Worked Hours**.

The worked hours are categorized by type of population. The definitions of the populations are provided in the document **Population-Event Definitions (BYTP-H&S-INF-2084)**.

Collection within France: Refer to the French version of this document.

Collection outside of France: Worked hours are manually entered for each population and each worksite.

Notes:

- The worked hours data for A1 BY, A2 BY and B BY personnel is the responsibility of HR. **The hours provided by HR representatives must be reported exactly as they are in the Worked Hours application.**
- Ensures that data entry and validation in Worked Hours is completed by the 10th of month M for month M-1.
- When certain data is unavailable by the deadline, estimations can be made, but must be corrected before the next deadline (the 10th of month M+1 for month M-1).

9. Collection of data Related to Addiction Prevention

For each project, the following information is reported monthly via a form available in the Quickconnect tool (H&S - Monthly Report - Addictions):

- Total number of alcohol level tests / Number of positive alcohol level tests
- Total number of drug tests / Number of positive drug tests

This information is categorized according to the following population groups:

- A1 + A2 BY
- B BY
- C
- Optional: A1 + A2 + B NON BY staff (A1 + A2 + B)

Each project defines the responsibilities for entering this information into the Quickconnect. Data entry must be completed by the 10th of month M for month M-1.

10. Collection of Health and Safety visits Data

For each worksite, the number of Health and Safety visits carried out monthly is reported via a form available in the Quickconnect tool (H&S - Monthly Report - Visits & Launches - Non-HiPo Events) according to the following breakdown:

- Site managers to Directors
- Site engineers
- Methods
- Foremen
- OHS officers

Each project defines the responsibilities for entering this information into Quickconnect. The data entry must be completed by the 10th of month M for the previous month (M-1).

When the Quickconnect tool is used to carry out all health and safety visits within a specific entity/project, it is possible to stop completing the monthly form (the monthly data compilation is ensured by considering all forms filled in during the month).

11. Collection of Other Reporting Data

Other information is collected monthly by email from the health and safety representatives:

- Key actions related to the Health and Safety approach (Major Risks, Safety Culture, Greenlight actions, etc.)
- Recognitions from third parties (clients, external organisations, etc.), successes, innovations, campaigns, training and drills, ergonomics, etc.
- Major challenges

Ad hoc requests not listed above may also arise.
