LINES OF DEFENCE AS THE BARRIERS TO PREVENT SEVERE ACCIDENTS

A thorough analysis of our severe and fatal accidents revealed that 80% were related to the following **6 major risks**:

**RISK
LIFTING**

**RISK
COLLISION**

**RISK
WORK AT HEIGHT**

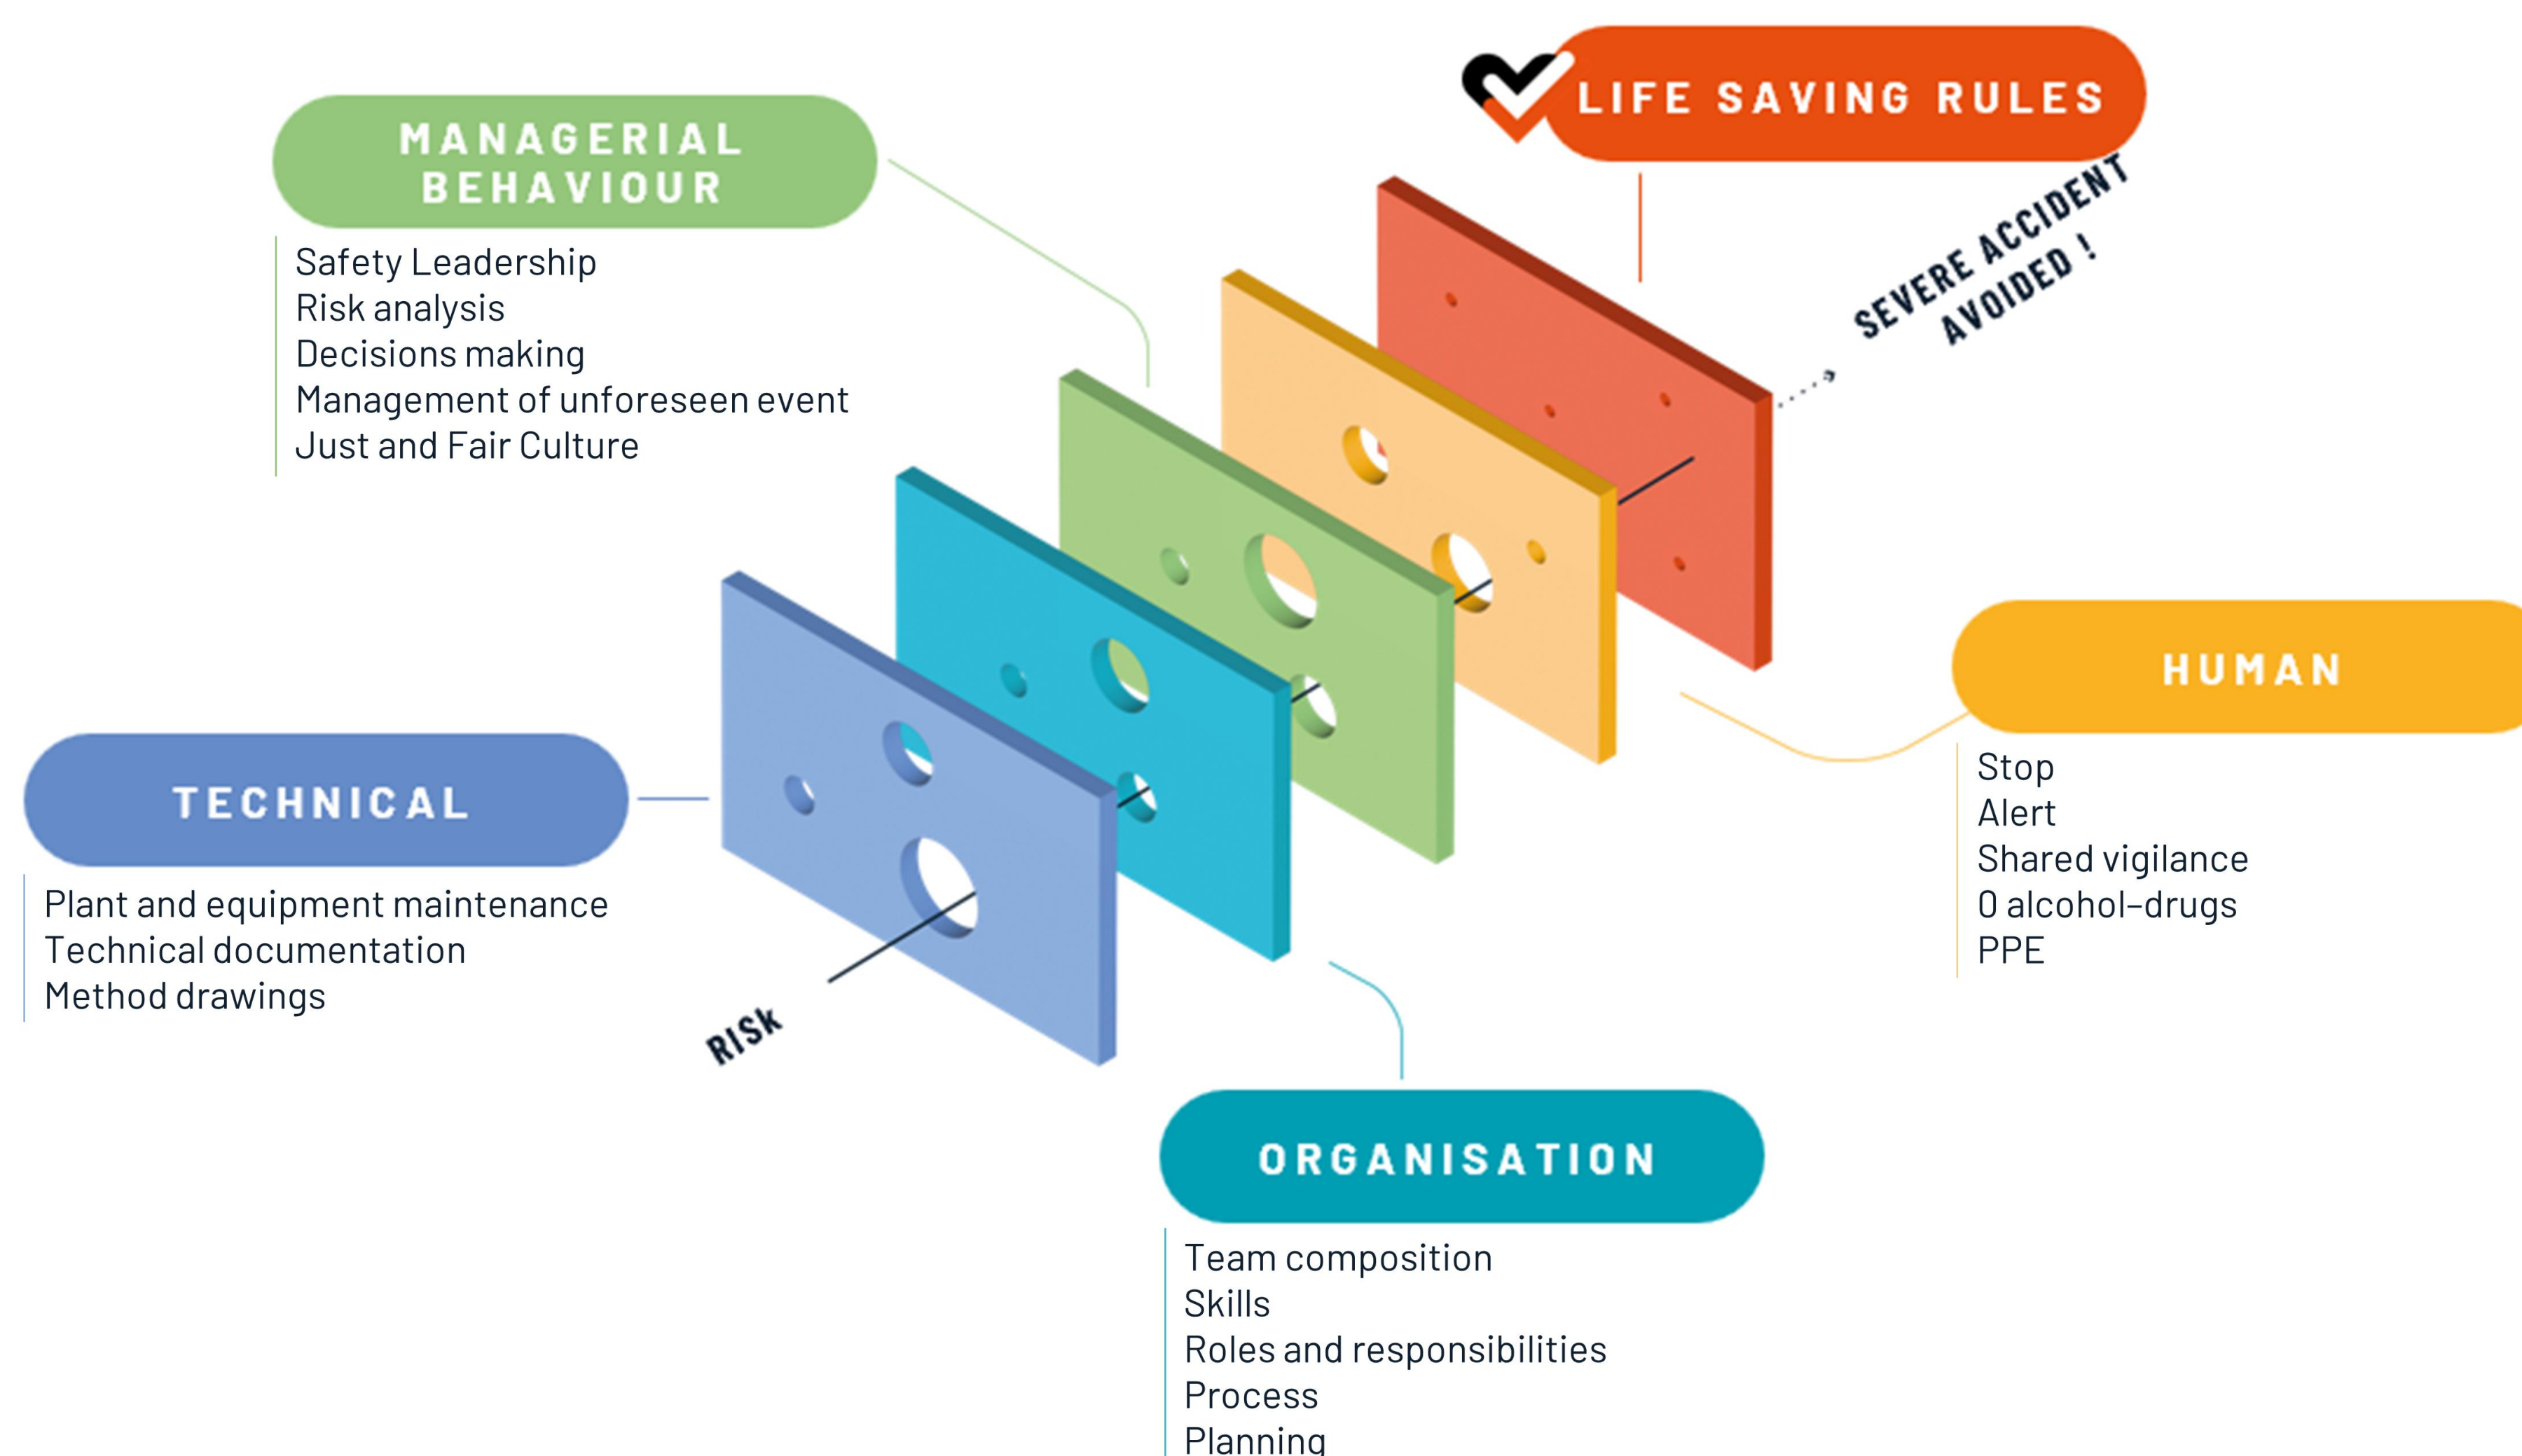

**RISK
STABILITY**

**RISK
POWERED PRODUCTION
EQUIPMENT**

**RISK
HAZARDOUS ENERGIES**

Major risks are managed through those **Lines of defence**.

They are **technical, organisational, managerial, human** and **behavioural**.

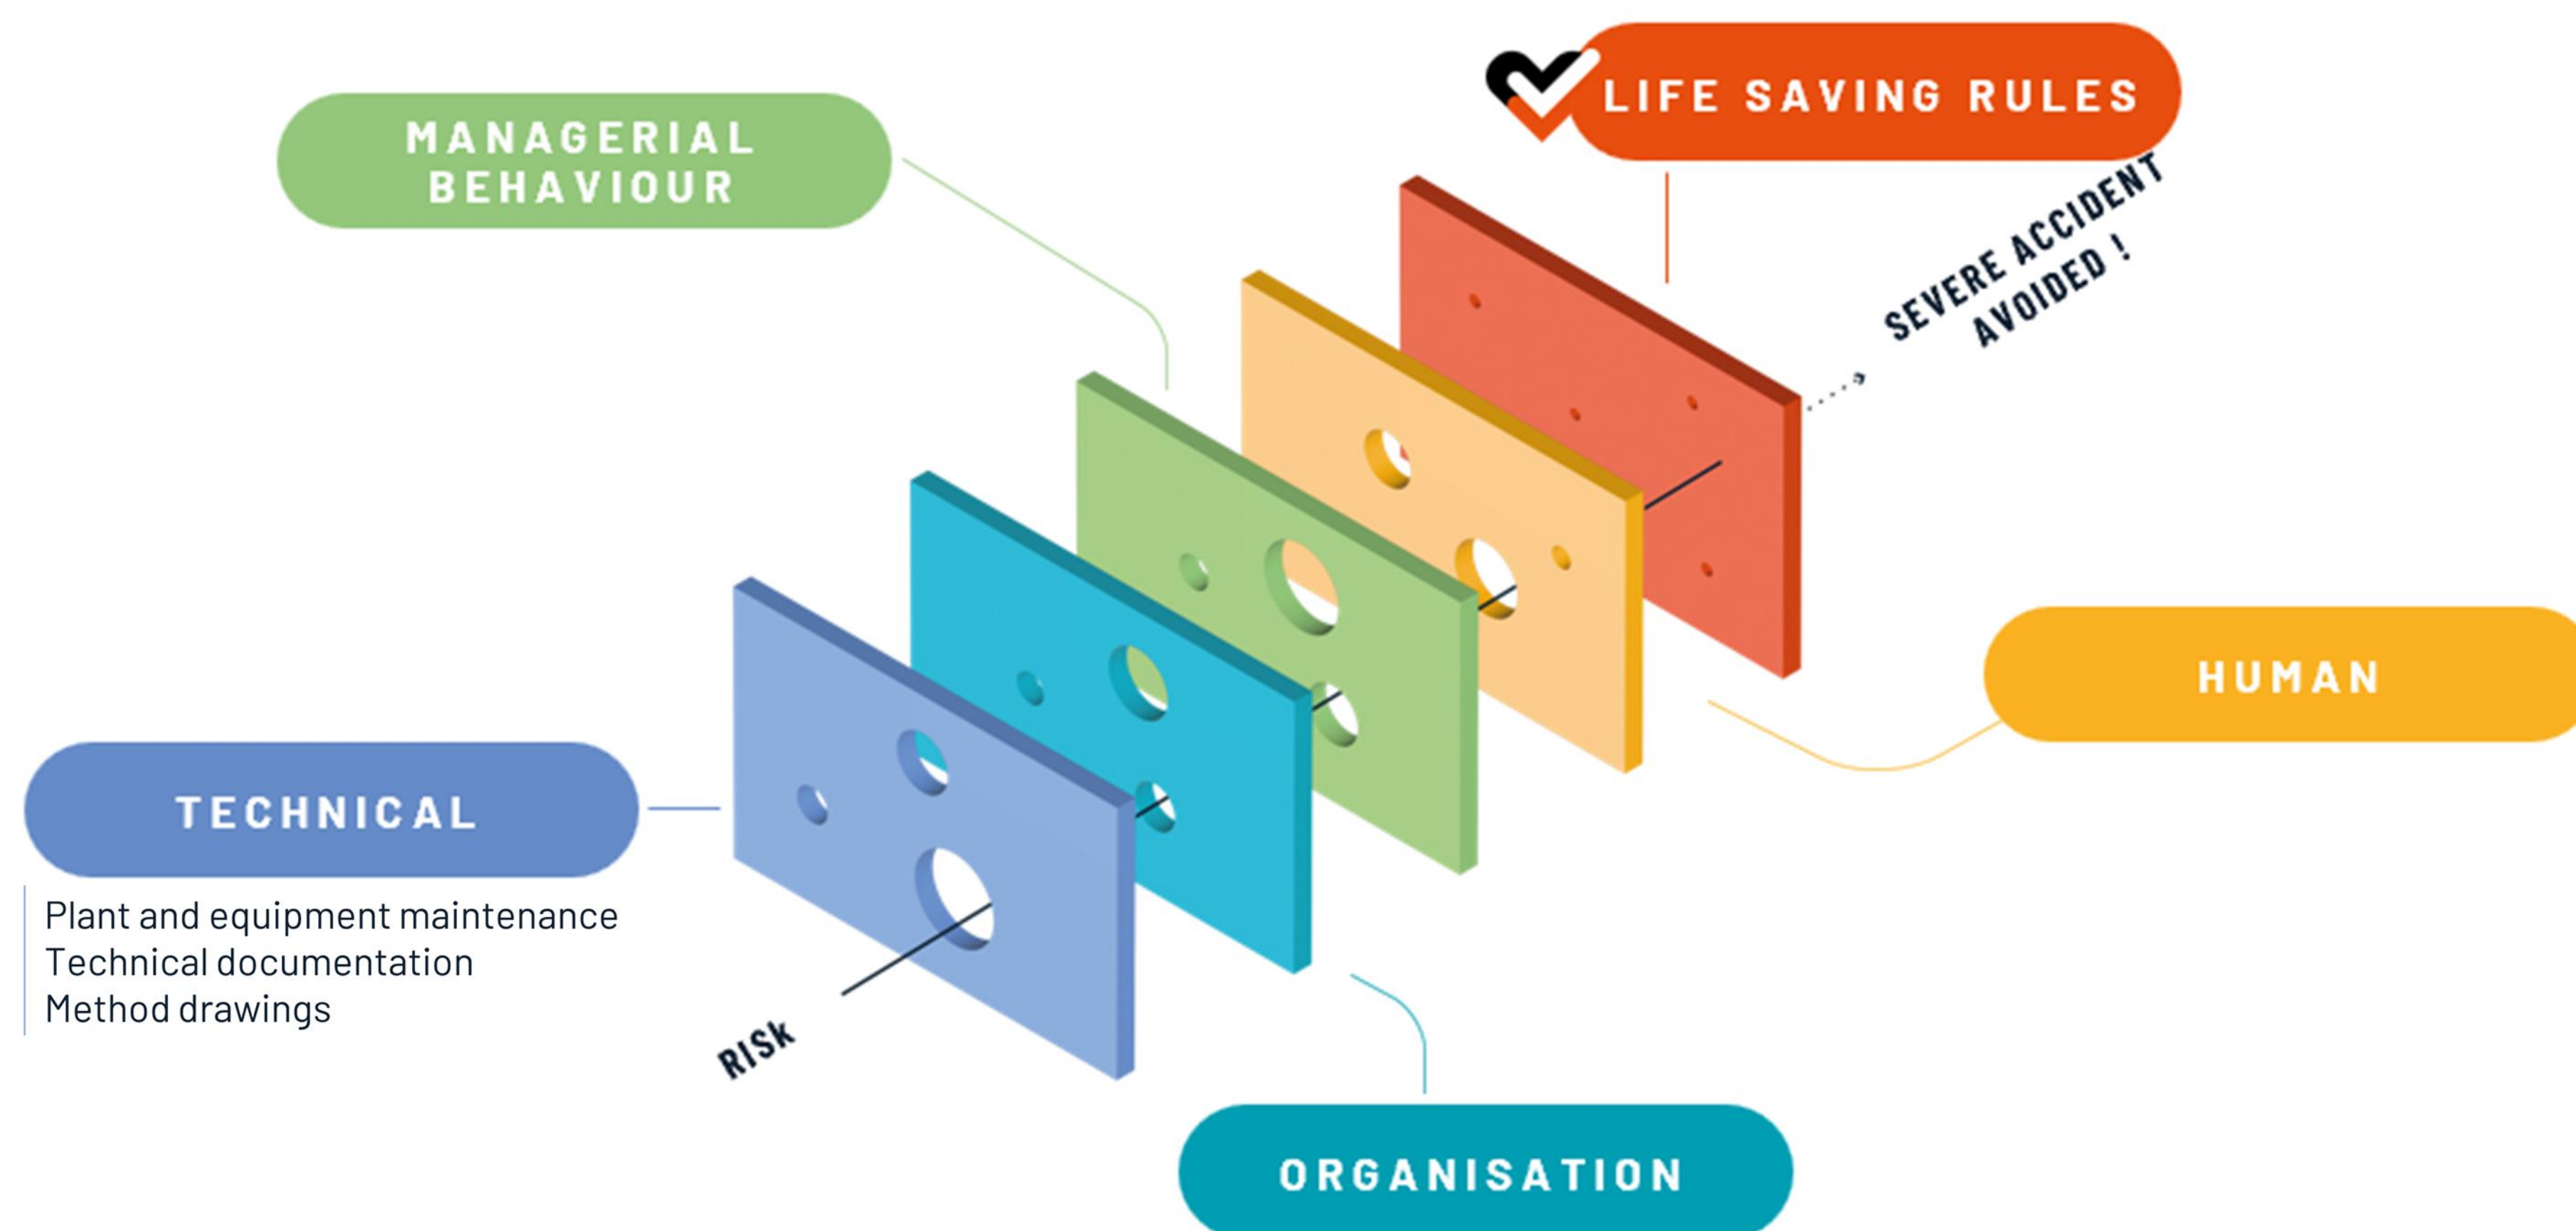

Complementary and often interconnected, the protections provided by each of these lines are key to achieving our goal of zero severe and fatal accidents.

SAFETY
CULTURE

The **equipment used** by Bouygues or any other party on site **must be safe, suitable for the need, and:**

- Integrate safety systems
- Limit the risks of misuse and awkward postures
- Be suitable for the task to be performed
- Be compliant with our company and regulatory requirements
- Be well-maintained over time

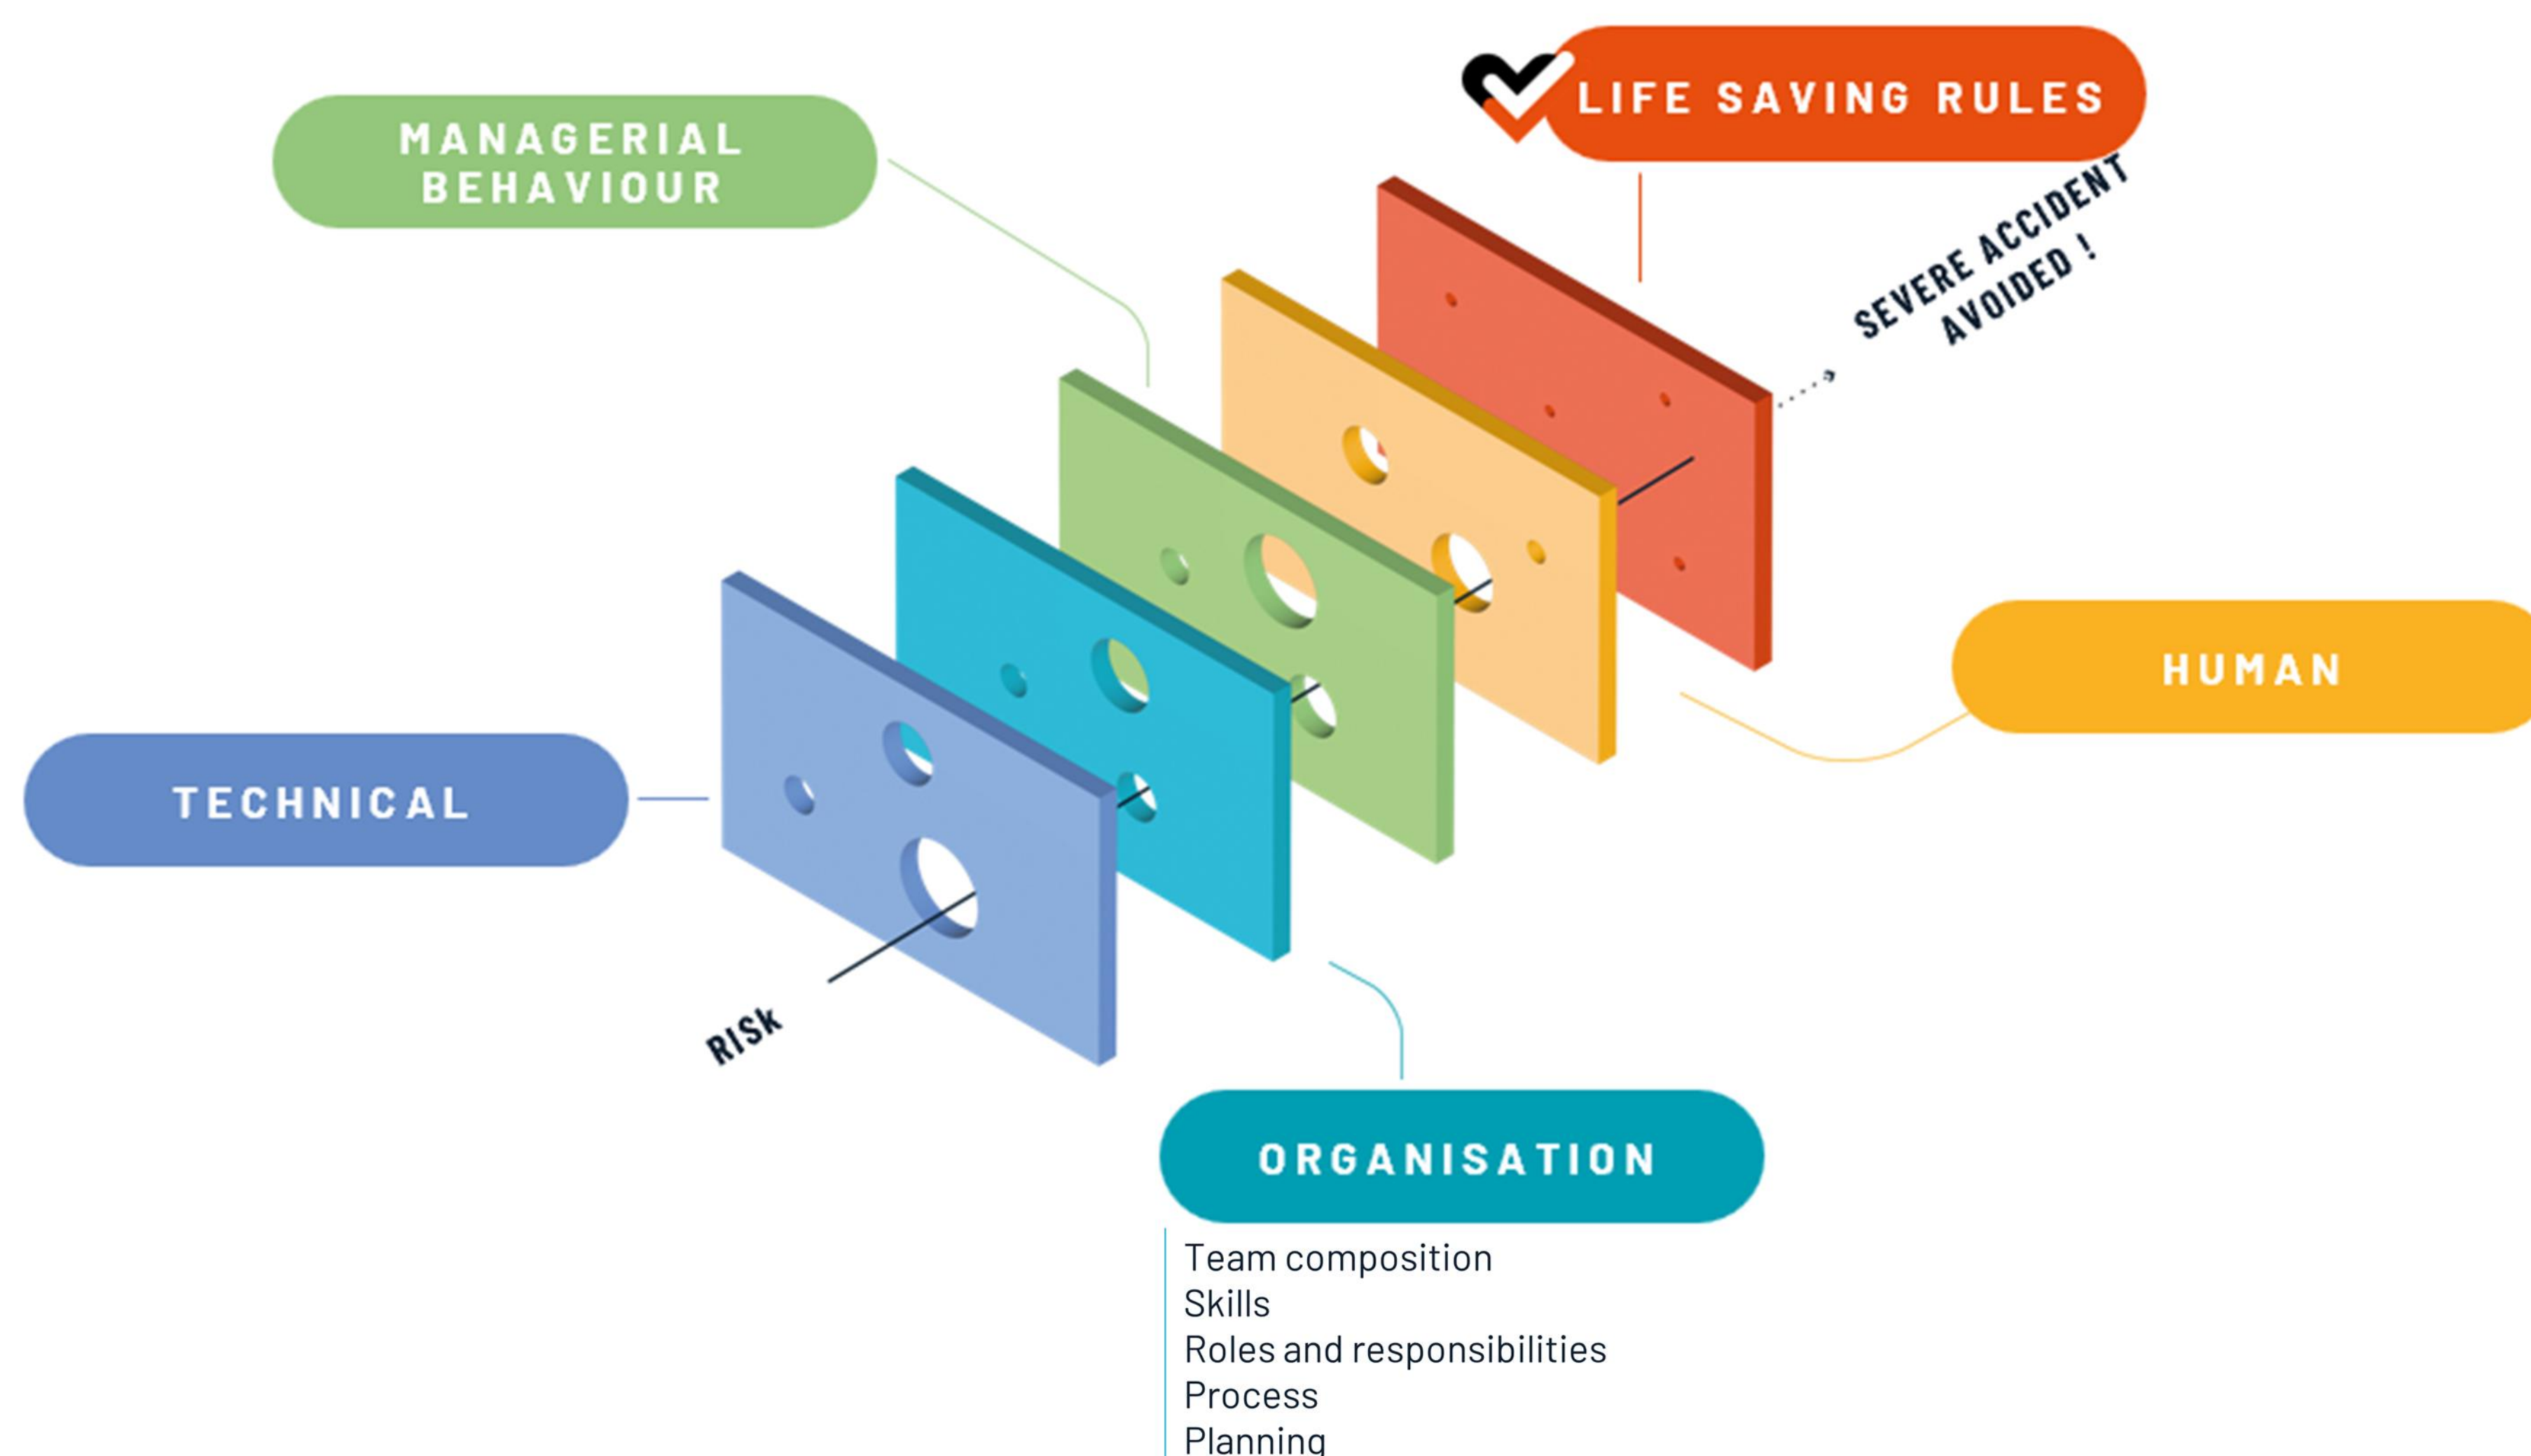

The **manuals and instructions, operating procedures**, and other **technical standards** are collectively established depending on the needs with suppliers, methods, prevention, construction and the equipment department.

STOP must be exercised for any **observed technical issue** and any **deviation from a rule or methodology**.

The situation must be analysed and addressed collectively.

Organisation allows to be prepared for **all foreseeable situations**, but also to properly deal **with the unexpected**. At a minimum, it must include:

- Defined roles and responsibilities
- Identified necessary skills and training as well as assignment of the appropriate personnel
- Established flow of information between project participants and at the interfaces with our partners
- Management of our subcontractors to optimise and ensure the safety of all during their interventions
- Logistics, storage, deliveries, and site clearance
- Implemented safety daily briefing ensuring that everyone has a detailed view of the tasks of the day

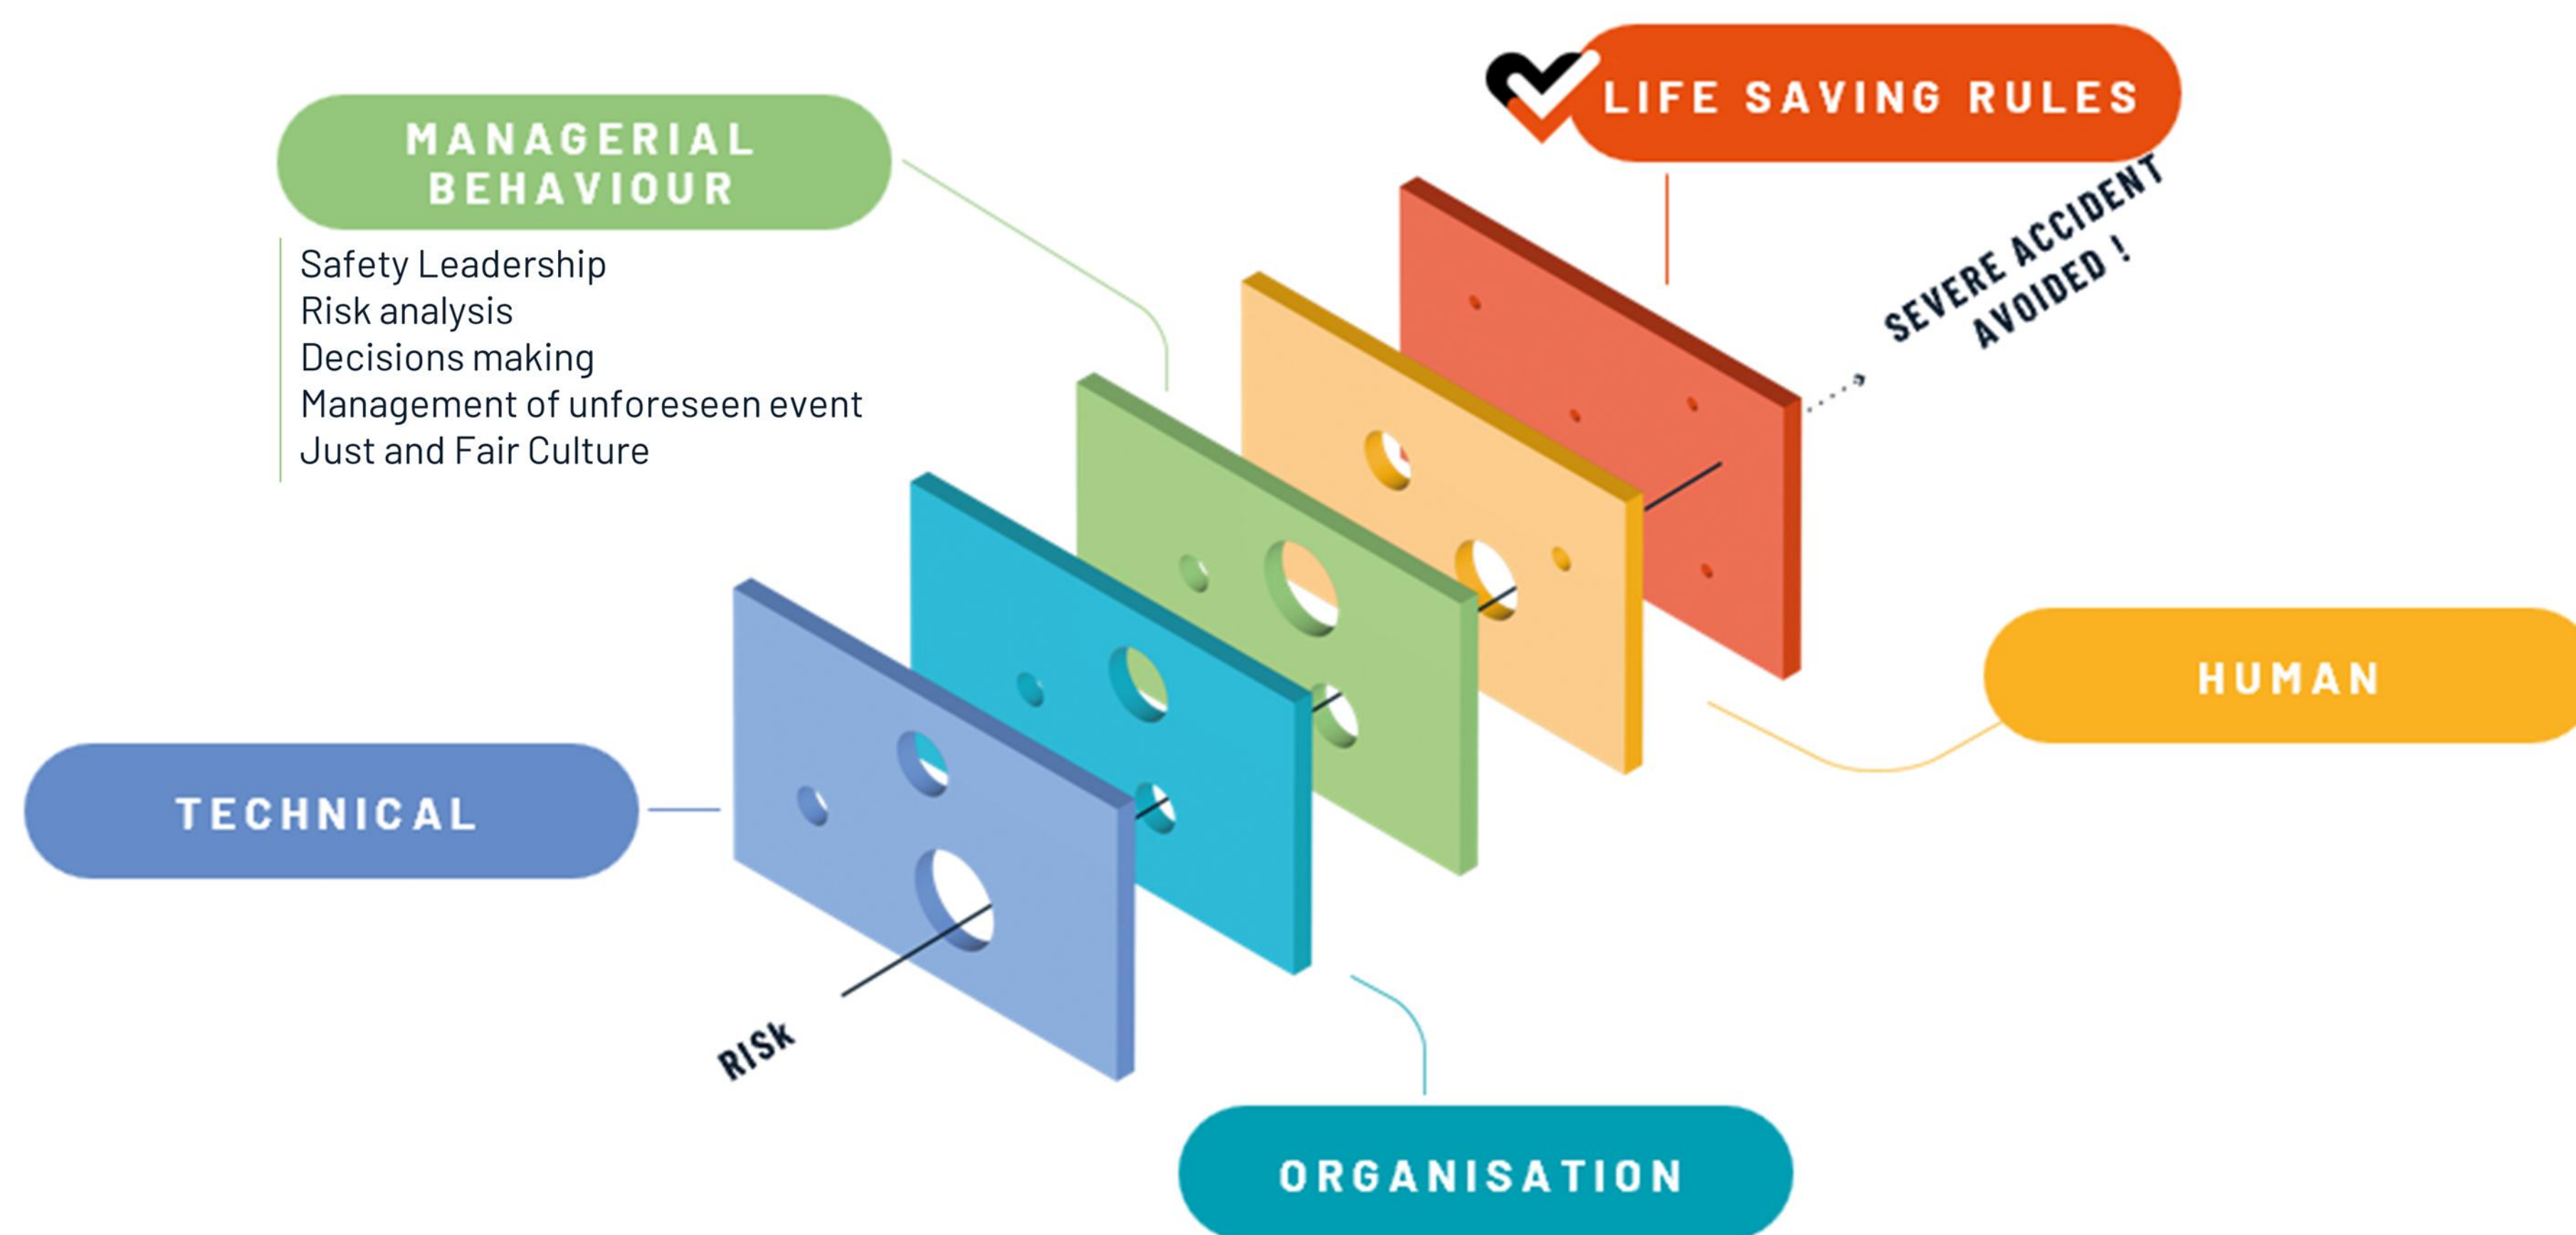

The schedule is the key element of the organisation and activity preparation. It must be **consistent with the resources** implemented and shall **prevent co-activities**. It ensures there is no conflict between the expected level of safety and project deadlines.

STOP must be exercised in case of any **deviation from the planned organisation** that could generate an event with potential severe consequences.

MANAGERIAL BEHAVIOURS BARRIER

Managerial behaviour is one of the key elements to creating a **favourable safety atmosphere** and to encouraging the expected behaviours. Every Manager must act as a Safety Leader, which notably involves:

- Being present in the field, attentive to the working conditions of the teams and listening to concerns
- Supporting their collaborators to anticipate, to properly analyse risks and to help them to make the right choices
- Integrating health and safety into their decisions and assessments
- Being demanding with himself and his collaborators
- Applying a just culture by recognising good behaviours and acting appropriately in response to unsafe behaviours
- Guiding their teams to handle unexpected situations through collective and thoughtful decision-making without haste

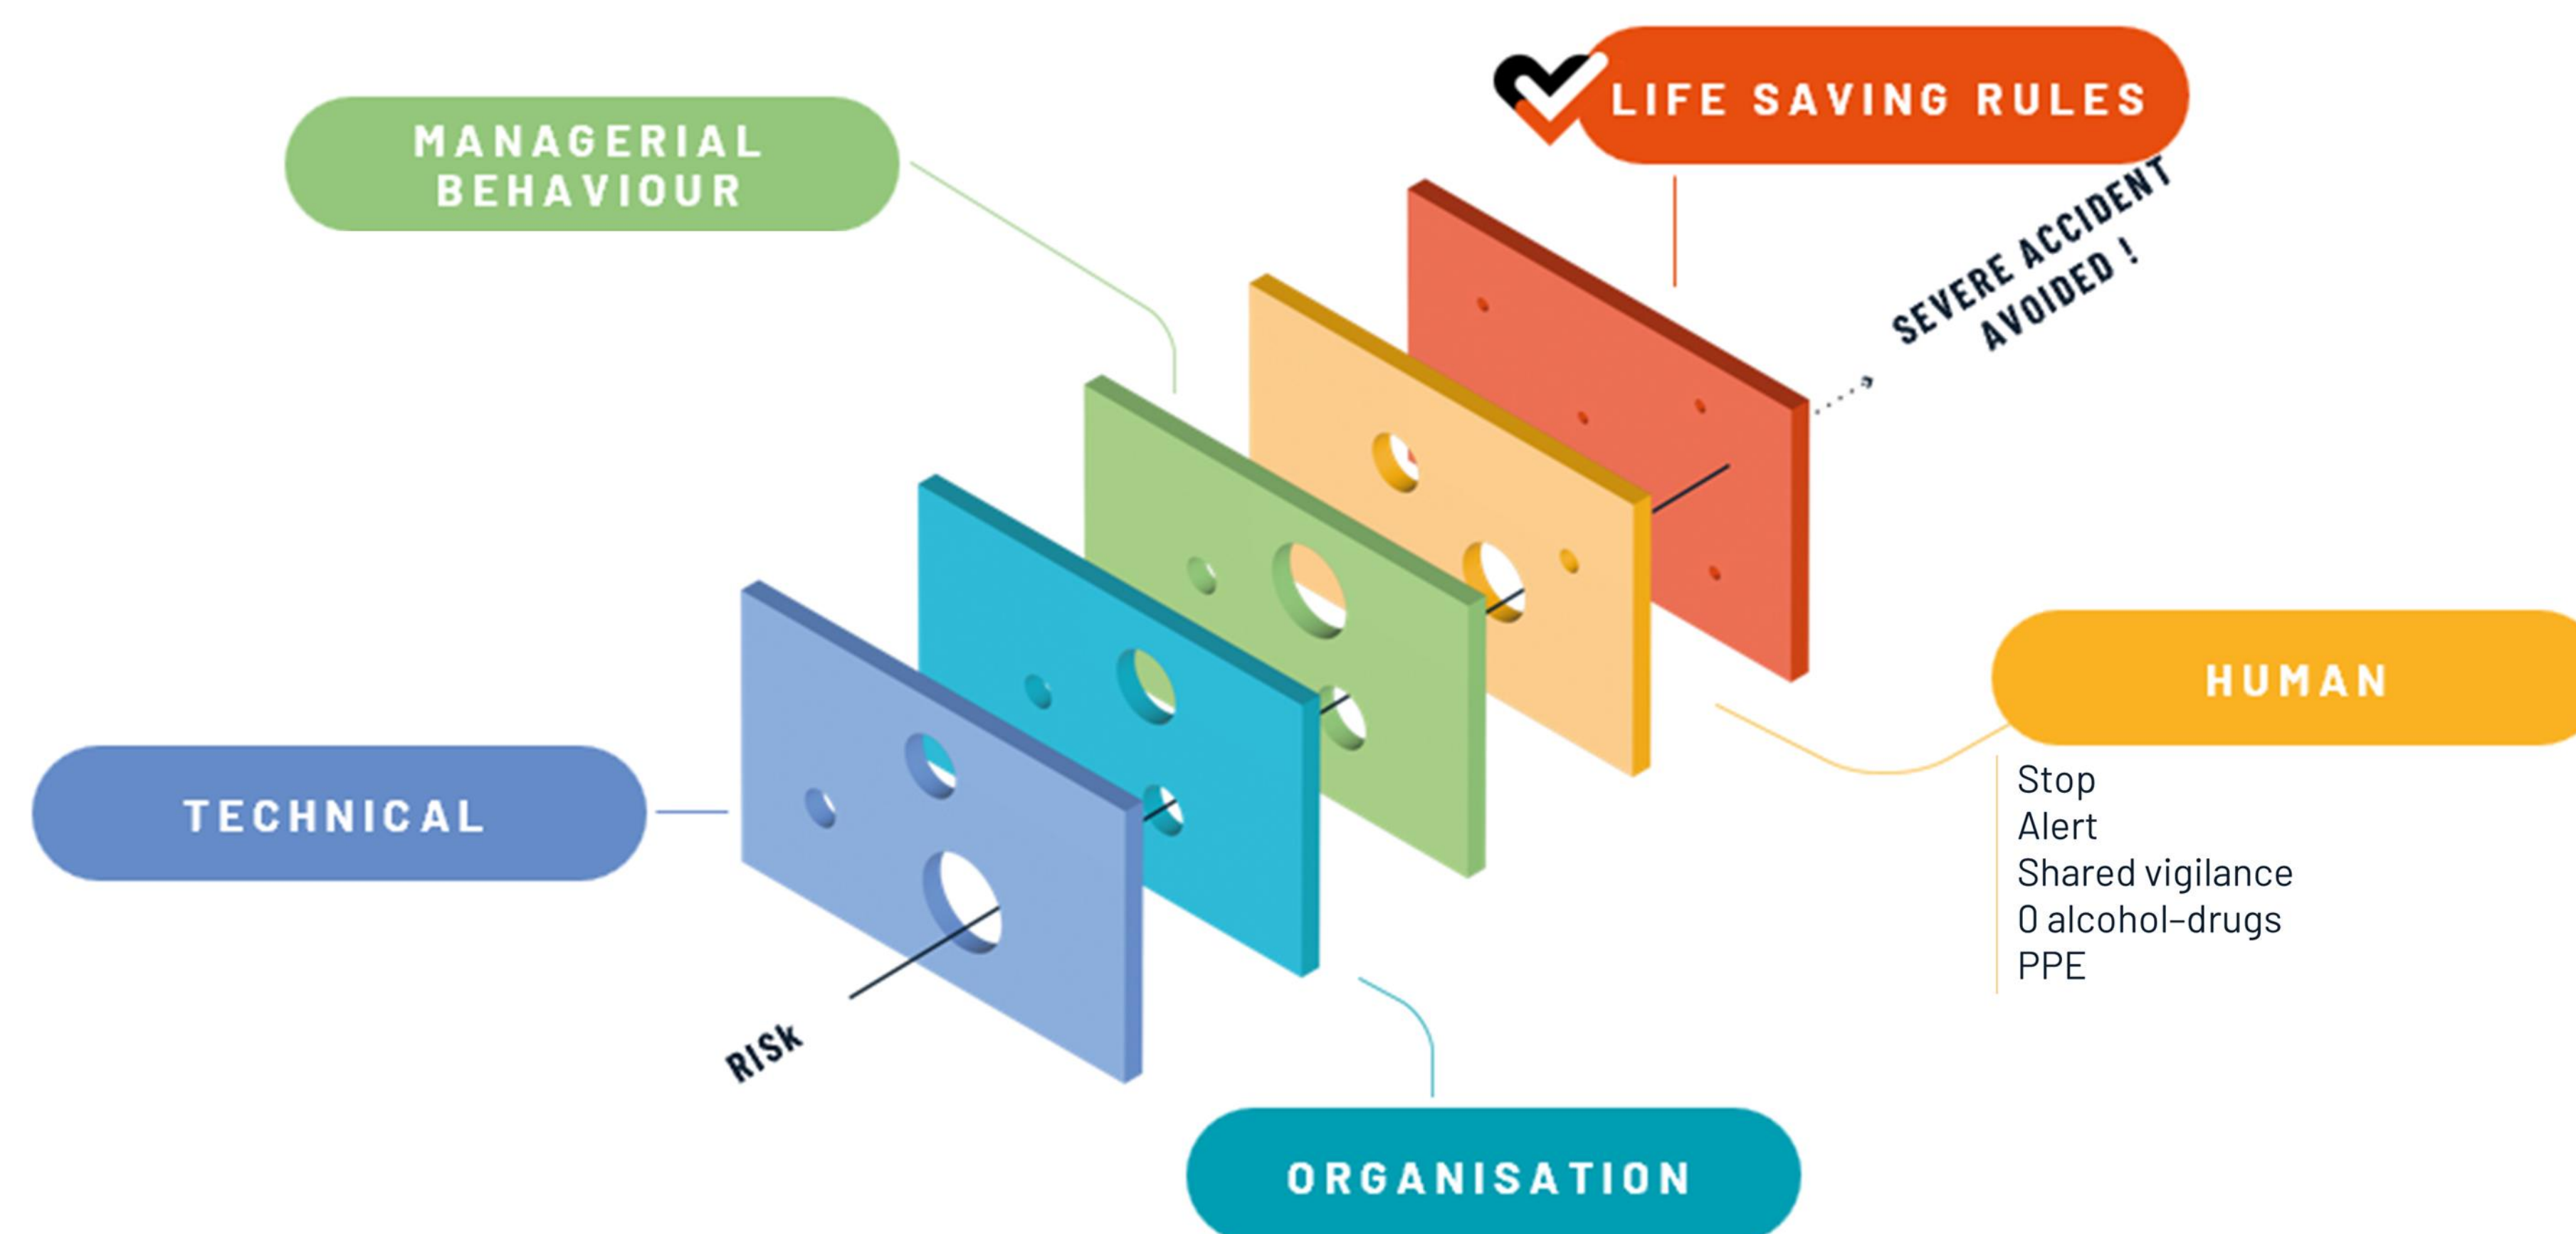

If the conditions are not met to work safely, it is the **duty and responsibility of every manager** to speak up and enforce to **STOP**

We cannot manage everything at company level through technology, organisation and management.

Ensuring everyone's health and safety is the responsibility of each individual: Bouygues employees, partners, temporary workers, subcontractors, clients...

We must all be fully involved and vigilant:

- For our health: not being under the influence of drugs, alcohol, or medication, using the ergonomic equipment provided, and wearing the required PPE
- By being attentive to our work environment and its changes
- Towards younger workers, new arrivals, and temporary workers who are discovering our company
- Towards everyone through shared vigilance

If the conditions are not met to work safely, it is **everyone's duty to alert** and to **STOP**

LIFE SAVING RULES BARRIER

A final barrier, in addition to the previous ones, consists of 10 Life Saving Rules, which are behavioural requirements specifically targeting the prevention of severe and fatal accidents.

RISK LIFTING

- ✓ I ensure that the load being lifted is a **single unit**
- ✓ I do not stand between a load and a **fixed obstacle**, or **under the load** when it is being **lifted up or lowered down**
- ✓ I use lifting **accessories** that are **checked** and **suitable** for the load

RISK STABILITY

- ✓ I **stabilise** materials, plant and equipment at all times, and I ensure that the **support they rely on can take the load**

RISK COLLISION

- ✓ I respect the **traffic segregation lanes** for vehicles and pedestrians
- ✓ I do not go into the work zone of moving plant or vehicles without the **operator's acknowledgement**

RISK POWERED PRODUCTION EQUIPMENT

- ✓ I use **suitable equipment or tools** for the task and I **do not override** their safety systems

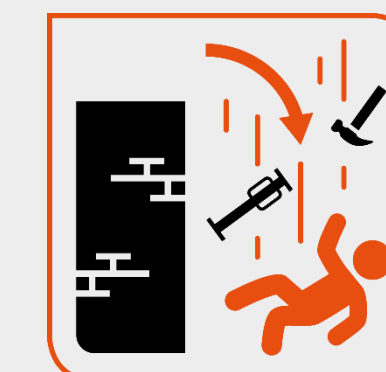

RISK WORK AT HEIGHT

- ✓ I **do not expose myself** to the risk of falling from an unprotected edge, and I **protect the openings** and open edges that I create

RISK HAZARDOUS ENERGIES

- ✓ I check that there is **no residual energy** before carrying out any work on networks or production equipment

- ✓ I do not enter an **exclusion zone**

RISK LIFTING

- ✓ I ensure that the load being lifted is a **single unit**
- ✓ I do not stand between a load and a **fixed obstacle**, or **under the load** when it is being **lifted up or lowered down**
- ✓ I use lifting **accessories** that are **checked** and **suitable** for the load
- ✓ I do not enter an **exclusion zone**

If unable to adhere to these rules, I "STOP" and alert my hierarchy.

3 LIFE SAVING RULES AS THE ULTIMATE BARRIER TO PREVENT SEVERE ACCIDENTS DURING VEHICLE-PEDESTRIAN INTERACTIONS

RISK COLLISION

- ✓ I respect the **traffic segregation lanes** for vehicles and pedestrians
- ✓ I do not go into the work zone of moving plant or vehicles without the **operator's acknowledgement**
- ✓ I do not enter an **exclusion zone**

If unable to adhere to these rules, I "STOP" and alert my hierarchy.

RISK WORK AT HEIGHT

- ✔ **I do not expose myself** to the risk of falling from an unprotected edge, and **I protect the openings** and open edges that I create
- ✔ I do not enter an **exclusion zone**

If unable to adhere to these rules, I "STOP" and alert my hierarchy.

RISK STABILITY

- ✓ I **stabilise** materials, plant and equipment at all times, and I ensure that the **support they rely on can take the load**
- ✓ I do not enter an **exclusion zone**

If unable to adhere to these rules, I "STOP" and alert my hierarchy.

RISK POWERED PRODUCTION EQUIPMENT

- ✓ I use **suitable equipment or tools** for the task and I **do not override** their safety systems
- ✓ I do not enter an **exclusion zone**

If unable to adhere to these rules, I "STOP" and alert my hierarchy.

RISK HAZARDOUS ENERGIES

- ✓ I check that there is **no residual energy** before carrying out any work on networks or production equipment
- ✓ I do not enter an **exclusion zone**

If unable to adhere to these rules, I "STOP" and alert my hierarchy.
