

Subcontractor Management (HSE process)

The responsibilities of every Subcontractor include:

- Cooperating with Tenderer management and with other Subcontractors
- Ensuring the Work is safely executed
- Complying with all applicable Project HSE requirements (Legal, Employer, tenderer and applicable site-specific requirements)
- Verifying the proper personnel training for the work execution and providing training records
- Providing all documents describing the HSE procedures, safe work methods and risk assessments
- Delivering all the HSE awareness documents to site personnel (including temporary staff)

It is therefore vital that Subcontractors are fully engaged in with the Project Health & Safety expectations in order to achieve our aim of securing a safe working environment where everyone has the right to return home free from injury and ill health effects every day.

In particular, the Project team will ensure that:

- The Health and Safety performance and maturity of Subcontractors is evaluated during the Subcontractors selection process
- The highest standards of Health and Safety are specified in the procurement process
- Selected Subcontractors are engaged early in the H&S programme
- All Subcontractors personnel are processed through the project Induction system
- A list of all Subcontractor equipment planned to be brought onto the project is provided, including satisfactory evidence of safety, maintenance and suitability of the equipment.
- All subcontractors supply a register of all hazardous substances to be brought on to the project, and how these will be stored safely.
- All Subcontractors provide details of relevant competency certification held for their personnel.

Selection phase

Subcontractors are awarded considering their past HSE performances and the maturity of their HSE Management System. This is evaluated as far as practicable by Tenderer's Project Health & Safety team during the Subcontractor selection process led by the procurement team.

The selection process addresses the following considerations :

- Maturity of the Subcontractors H&S Management System
- Recent experience of Tenderer with the Subcontractor
- Similar work experience
- Historical safety performance (including recent trends)
- Ability and willingness of Subcontractor to fulfil the Project HSE-MS Requirements and to commit to continual improvement
- Competence and ability of Subcontractors to execute the work in safe manner

Project HSE requirements are provided to Subcontractors at selection stage and Subcontractor's documentation to be received after Contract Award are defined in the service

Key HSE project documentation are attached to the contract placed to the awarded Subcontractor.

Pre-execution phase

Each Subcontractor appointed to undertake construction work on the project will be provided with a copy of the latest revision of the Project H&S & environmental Plans. The Subcontractor's Senior Representative will review this H&S Plan and shall inform the Tenderer if any of the Subcontractor's work activities create key Health and Safety risks that have not been adequately covered in this plan. Any identified planned activities which remain unassessed, will be risk assessed by Subcontractor and submitted to Tenderer for approval.

In addition to receiving project inductions, an on-site Kick-off meeting is organised with the Subcontractor 's site management team, prior to commencement of their activities, thus ensuring Project's H&S expectations are known and understood, and to appraise their level of understanding, preparedness and alignment.

Each Subcontractor is required to develop their own Health and Safety Management Plan that states how they intend to meet, within their organisation and their own Subcontractors, the requirements set out in the Project H&S Plan & Environmental Plan. These plans will be reviewed and accepted by Tenderer prior to Subcontractors commencing work on site.

During works execution

Subcontractors, when working on Tenderer's worksites (onshore and offshore), will be fully integrated in the HSE processes enforced for construction activities, meaning as a minimum:

- Site induction
- Drug & Alcohol testing program
- Awareness and in-house training sessions
- Competencies assessment at the workplace
- Project Behavior Based safety culture development
- PPE requirements
- Traffic rules
- Risk Assessment and Method Statement
- Task risk Assessment
- Permit To Work process if applicable
- Pre-start briefing / ToolBox Talks
- Management meetings
- Stop work policy
- Management walkthrough / Daily inspection of workplace
- Reporting of events (unsafe acts, near-misses, injuries)
- Investigation of events and implementation of corrective actions
- Emergency drills
- Recognition program
- Disciplinary policy

After work completion

A final evaluation of each subcontractor is established and included HSE criteria. This evaluation is shared with the contractor. Contractor may be required to establish and follow a remedial action plan to ensure that he may participate in future tenders.
