1. PURPOSE

The purpose of this procedure is to define:

- the principles applicable for the management health & safety events (incidents, accidents, unsafe acts/situations ...).
- the events notification process within BYTP/CW Division.
- the events administrative declaration.
- the methods of investigation according to the type of events.
- the measures put in place to prevent these events from reoccurring, the follow up of their implementation and the involvement of management following a fatal or severe accident.

This procedure does not address the following subjects which are treated in separate procedures:

- **PRO-H&S-2093 [CW Division H&S reporting].**
- **PRO-H&S-2081 [Organise and manage emergency situations].**
- **PRO-COM-7001 [Crisis management].**

2. SCOPE

This procedure applies to all BYTP worksites, projects and construction sites.

It applies to all activities and all parties working under the responsibility of BYTP (including sub-contractors), unless specific rules of governance of the project or entity takes precedence.

3. REFERENCE DOCUMENTS

- **MAN-H&S-2000 [H&S Manual].**

4. DEFINITIONS AND ABBREVIATIONS

The definitions of all types of events covered by this procedure are available in the document **INF-H&S-2084 [Events definition]**, which specifies in particular:

- the different types of work-related accidents (personnel injury or material damage).
- the near-misses.
- the different types of commuting accidents.
- the unsafe conditions and unsafe acts.

Nevertheless, two important definitions are detailed below:

- **Severe accident**

An event is qualified as a severe accident if it is a:

- fatal accident (occupational or commuting).
- accident with physical injury resulting in irreversible harm or consequences for the victim, either a permanent disfigurement (e.g.: severe skin burns requiring surgery ...), or permanent disability (e.g.: functional loss of a sense, paralysis of a limb, loss of a limb ...) regardless of the lost time injury duration.
- accident with physical injury requiring hospitalisation lasting more than 48 calendar hours.

- **"HiPo" (High Potential) event**

An event (injury, property damage, near miss, unsafe act/ condition...) is classified HiPo when it could have potentially lead to:

- a severe accident or,
- a material accident with significant consequences.

5. RESPONSIBILITIES

5.1 BYTP SENIOR MANAGEMENT

- receive event notifications.
- attend the debriefing meeting in the event of a fatal accident.

5.2 HEAD OFFICE OPERATIONAL MANAGEMENT

- forward any event notifications.
- appoint the level B investigation leader in coordination with the H&S Department.
- attend severe events debriefing meetings held for operations falling under its responsibility.
- chair the debriefing meeting in the event of a fatal accident falling under its responsibility.

5.3 HEALTH AND SAFETY MANAGEMENT (HEAD OFFICE)

- decide, if necessary, on the required investigation level.
- appoint and/or participate in appointing the investigation teams.
- participate in and/or lead the investigation.
- manage administrative declarations for submission to the French authorities.
- inform the CSSCT (France Health, Safety and Working Conditions Commission) when required.
- prepare and issue Safety Warning Flash.
- archive the investigation report and any other information.

5.4 ENTITY SAFETY MANAGER

- prepare the event notifications.
- participate in and/or lead level B investigations.
- participate in debriefing meeting with BYCN in the event of a fatal accident.

5.5 PROJECT DIRECTOR/MANAGER

- assess whether the event is classified severe and/or HiPo.
- define the level of investigation with the Project safety manager.
- appoint, participate in and/or lead the investigations depending on their levels.
- validate the investigation report and the event close-out.
- chair a debriefing meeting, when required by Head Office Management, for severe or HiPo events.

5.6 PROJECT SAFETY MANAGER

- assess whether the event is classified severe and/or HiPo as well as the investigation level.
- prepare the event notifications.
- define the level of investigation with the Project manager.

- appoint, participate in and/or lead the investigations depending on their levels.
- issue the investigation report.
- ensure the follow-up of the action plan associated with the investigation report.
- draft a safety warning flash in the event of a severe or HiPo accident.
- archive the investigation report as part of the project documentation.

If there is no project safety manager on the project, all activities described in this procedure are conducted by a project member formally assigned to by the project manager.

5.7 ALL PERSONNEL

- report any observed event to his hierarchy.
- participate in the investigation if required.

6. EVENT MANAGEMENT PRINCIPLES

INF-H&S-2085 [H&S event management matrix] provides a synthetic description about the management of events which are developed in the following chapters.

For each type of event, the following elements are specified:

- the event alert and notification method.
- whether or not to file an administrative declaration.
- the level of investigation required.
- the cause analysis process.

INF-H&S-2102 [H&S event management flowchart] sets out the event management process, the responsibilities and associated documents.

7. IMMEDIATE ALERT OF SIGNIFICANT EVENTS

An immediate alert is required in the following cases:

- death or accident with a life-threatening condition.
- severe lost time accident.
- material accident with established significant consequences.
- severe commuting accident (only if the transportation is organised by BYTP).

Each project maintains an up-to-date contact list needed to trigger this immediate alert.

7.1 ORAL ALERT

The following process is applied:

- a) phone alert to convey immediately available information (stating what is confirmed or not):
 - by the Project Director/Manager to his Head Office Operational management, who forwards the information all the way up to the BYTP/CW Division Management.
 - by the Project Safety Manager to BYTP H&S Department, which forwards the information all the way up to the H&S Director of the CW Division.
- b) the H&S Director of the CW Division coordinates the sharing of information with the BYTP/CW Division Management and the relevant functional departments (HR, communication ...).

- c) phone calls can be made 24/7, however, in the event of an accident occurring at night or in the evening, or in case of jet lag, the call can be made the following morning (French time) depending on the severity of the event.
- d) phone call can be replaced by sending an SMS or WhatsApp message, as long as the sender makes sure the message is received.
- e) if a call fails to get through (or no SMS/WhatsApp read receipt indication), the caller contacts the next higher up person in the communication chain.
- f) the Head Office Operational management and the H&S Department notify their respective BYCN hierarchy.

7.2 WRITTEN CONFIRMATION OF THE ORAL ALERT

Following the oral alert and as soon as possible, a confirmation email is sent by the project and follows the same distribution channels as the oral alert.

This email contains, as a minimum, information available at the time of sending (stating what is confirmed and what is not).

8. DETAILED WRITTEN NOTIFICATION

A detailed written notification is produced within 24 hours for all events listed in **INF-H&S-2085 [H&S event management matrix]**.

The following process is applied:

- the project safety manager completes sections 1 and 2 of the form FOR-H&S-2083 [Event report].
- after review by the Construction/Production/Project Manager, the project safety manager sends sections 1 and 2, acting as written notification, to the relevant BYTP reporting lines (operational and P2S as a minimum).
- the CW Division's H&S Department then informs BYCN as the situation evolves.

Each project maintains an up-to-date e-mailing list so that this detailed written notification can be implemented.

9. EVENT ADMINISTRATIVE DECLARATIONS

9.1 ADMINISTRATIVE DECLARATION TO LOCAL AUTHORITIES

Declarations are carried out in accordance with local legislation and for BYTP France personnel as described in **INS-H&S-2087 [Administrative management of occupational accidents in France]** instruction.

9.2 INFORMATION TO CSSCT (FRANCE HEALTH, SAFETY AND WORKING CONDITIONS COMMISSION)

This section only applies to employees having a BYTP France contract.

The H&S Director for France operations informs the CSSCT for all events, based on the detailed written notification.

The CSSCT, once notified, reserves the right to conduct an accident investigation on the site where the event occurred.

10. EVENT INVESTIGATION

10.1 INVESTIGATION LEVEL

Following the occurrence of an event, an investigation is carried out with the aim of identifying the direct and root causes that led to the event. It then enables the project to develop a corrective actions plan associated with the various causes identified.

2 levels of investigation are defined according to the actual or potential severity of the event:

- Level A: event requiring a simple investigation at project level.
- Level B: event requiring an in-depth investigation at entity management level, with possible involvement of BYTP/BYCN H&S management.

The investigation level for an event is established taking into account the worst case scenario between the actual consequences and the potential consequences of the event.

The Project safety manager determine the investigation level together with the Project manager and potentially in coordination with the operational and H&S Management of the entity.

INF-H&S-2085 [H&S event management matrix] sets out the association between the severity of the event (actual/potential) and the required investigation level.

10.2 INVESTIGATION TEAM

The person in charge of the investigation, as well as the members of his team, are defined according to the event investigation level.

	Investigation leader	Investigation team (minimum)	Mobilisation deadline
Level A	Defined by Safety & Project Managers	▪ Project Safety Manager ▪ Line manager of the injured person ▪ Peer of the injured person (if necessary) ▪ Experts (if necessary)	Within 48 hours
Level B	Defined jointly by the Head Office Operational management and the CW Division H&S Department (with possible consultation of BYCN)	▪ Project Manager ▪ Project Safety Manager ▪ Line manager of the injured person ▪ Entity H&S Manager ▪ CW Division H&S Director (or his representative) (if required) ▪ Experts (if required) ▪ All participants required by law	Within 5 working days

Experts required to participate in the investigations are mobilised by the CW Division H&S Director. If they wish, CSSCT members also participate in the investigation and in the analysis of the event.

At project level, the members of the investigation team are identified in advance to ensure their prompt mobilisation.

Potentially:

- the client or its representative may be a member of the investigation team.
- the project defines specific measures to manage subcontractors events (ex: validation by BYTP of the investigation report issued by the subcontractor, or mixed investigation team BYTP-Subcontractor for events linked to coactivity...etc).

10.3 INVESTIGATION METHODS

The investigation team, once mobilised, conducts an investigation consisting, as a minimum, of the following elements:

- interview of the injured person, if he is in a position to answer questions.
- find and gather the facts.
- inspect the incident location.
- collect and record any evidences.
- identify and interview the witness(es).
- review all relevant documents, procedures and records.
- resolve conflicts and contradictions if any.
- identify any missing information.
- identify the direct and root causes.
- draft and issue the investigation report.

The investigation remains objective and factual. Team members avoid value judgment and blaming of persons.

The various line managers cooperate with the investigation team by releasing the employees for the purposes of the investigation.

10.4 CAUSES ANALYSIS

Regardless of the investigation level, the causes are always identified, only the method varies. **INF-H&S-2085 [H&S event management matrix]** sets out, according to the severity, the causes analysis method to be applied:

- simple method: direct cause analysis.
- in-depth method: direct and root cause analysis (using a structured method such as cause tree analysis, TOPSET, TAPROOT...etc, at the discretion of the person in charge of the investigation or of the H&S Department).

10.5 INVESTIGATION REPORT

The investigation team prepares its report by completing sections 2 and 3 of **FOR-H&S-2083 [Event report]**. In particular, in Section 3, the investigation team defines the actions plan associated with the direct/root causes identified.

Depending on the severity of the event and/or the difficulty in conducting the investigation, the time required to produce an investigation report may vary. On average, the report is issued within 15 days following the occurrence of the event, except if exceptional circumstances require further investigations.

The project validates and issues the investigation report to a pre-established recipient list that includes as a minimum:

- the Project management.
- the Head Office Operational management.
- the H&S Department (head office).
- the CSSCT and competent authorities if necessary.

10.6 REPORT FOLLOW UP AND CLOSING

The follow up of corrective actions set out in the investigation report is managed by the project and carried out in accordance with the procedure **PRO-H&S-2101 [Management of actions]**.

11. WARNING FLASH

Based on the conclusions and recommendations drawn up by the investigation team, the Project Safety Manager prepares a "Warning Flash" in case of a severe or HiPo event, in coordination with the H&S Department and according to the form **FOR-H&S-2058 [Warning Flash]** and issues within the project.

The purpose of this "Warning Flash" is to share the analysis of an event (findings, causes, recommendations) with all personnel, in order to prevent the same type of event from happening on other projects executed by BYTP.

The distribution and storage of "Warning Flash" within BYTP is ensured by the BYTP H&S Department.

12. REVIEW OF EVENTS BY THE MANAGEMENT

12.1 SEVERE OR HIPO EVENT

In case of a severe or HiPo event and when required by the Head Office management (H&S Dept., Head Office Operational management and/or Top Management), the Project Manager/Director organises and conducts a debriefing meeting for the management of BYTP.

The causes analysis of the event is discussed and the specific actions plan is validated during the meeting to prevent a similar event from reoccurring.

12.2 FATAL ACCIDENT

In the event of a fatal accident, or when required by the H&S Department and by BYTP Top Management, the Director of the entity conducts a debriefing meeting for BYCN.

As a minimum, the debriefing meeting determines whether:

- the investigation is successfully completed and has been carried out in due manner.
- the defined corrective actions are appropriate and adequate.
- the lessons learned have been identified for sharing with all relevant entities and personnel.

13. ARCHIVING

At project level

Investigation reports are kept in electronic version by the Project Safety Manager until the end of the project or later if legal action is under way.

At BYTP level

Investigation reports are kept in electronic version without time limit by the H&S Department.
