OUR TOP THREE EXTRAORDINARY ACTIONS

	Action 1	Action 2	Action 3
CHALLENGE	To empower our middle level managers to take increased and visible leadership accountability and clear ownership of Occupational Health, Safety and Wellbeing through the Align JV transitional stage activities and for the teams and activities within their areas of responsibility	Our procedural HSW documentation needs to be suitable for the current risks and should reflect the human performance factors such as fatigue, distraction and the changing environment. Documents have been identified as too long, too complex and difficult to understand, especially considering comprehension levels.	In line with the "HS2 Approach to health and safety" , and to further enhance that "health and wellbeing matters as much as safety" , At a time when Align activities are transforming to our handover phase, an increased focus on health and wellbeing competes with other organisational and personal priorities.
CHANGE RISKS	Establishing clear expectations for leadership, ownership and accountability in delivering continual improvement in the local management of assurance, monitoring, and the identification of unforeseen situations relative to the Top 5 Safety Hazards and Top 3 Health Hazards identified via Hazard Profiles	Information must be clear rather than complex and tailored to the audience to ensure understanding . Document quality must be improved, and therefore the authors must be formally trained . There should be one source of truth with human performance factors adequately considered, and with safety critical information cascaded via structured communication channels	Occupational Health and Wellbeing will have its place high in the Align JV "Transitional Stage Masterplan" . Align JV will raise the profile of occupational health and wellbeing across all personnel within our activities, by creating a renewed focus via extraordinary educational programmes and communications
BUSINESS CONTINUITY	Enhance access to data and performance information for the local leaders • Provide an agreed weekly data digest to each Package Manager / Middle Manager specific to their community and activities • Support communication and understanding of the top Occupational Health, Wellbeing and Safety Hazards specific to the areas of responsibility	Consider output from GMR Align JV Procedural Optimisation review at HS2 SHWELT Working Group with 6 Key Principles for improvement: • Clarity Over Complexity • One Source of Truth • Competence of document preparation process • Purposeful Structured Communication • Account for Human Performance Factors in planning and documentation • Tailor processes and documentation to match the needs and capabilities of all personnel	• Engage our Black Hat and Leadership teams in Occupational Health hazard and awareness education and coaching • Incorporate our top 3 hazards from our Occupational Health Hazard Profiles and monitor threats and opportunities at the point of work • Deliver special editions of internal Safety Matters / Health Matters whole project communications to raise awareness • Identify Occupational Health milestones with local teams to celebrate success and improvement achievements

Track your **top three extraordinary actions** for transitioning safely during FY25/26

Extraordinary Actions Tracker

Action	Description	Key Results (measurable)	Target date	Progress: Notes/Updates
1	Establish the community of our key middle leadership group and launch the objectives and expectations, and to evaluate impact over time via regular forums Enhance access to data and performance information for the local leaders Provide an agreed weekly data digest to each Package Manager / Middle Manager specific to their community and activities Support community communication and understanding of the top Occupational Health, Wellbeing and Safety Hazards specific to the areas of responsibility	- Group objectives, intent, activities established, recorded, ratified, published, and agreed activities commenced and dataset established, and shared - Data cascaded beneficially via Package White Board meetings and SHWELT forums, and measured via Leadership Observation (LAMBO), workplace survey feedback and improved performance measures (HSPI) 90% HSPI targets for observation / corrective actions achieved consistently	30/06/2025 commencing 01/07/2025 to 31/10/2025 31/10/2025	
2	Consider output from GMR/ Align Procedural Optimisation Review with the identified Six Key Principles for improvement: Use the knowledge gained from the Optimisation review output: - Share via the HS2 SHWELT Safety Culture / simplification of process working group - Develop a sample of documents with consideration of human performance elements - Run a trial optimised documentation across Align JV activities and share findings with HS2 Supply Chain community	- Lead on trial of optimised documentation within a sample of Align activities - Impact and feedback captured in HS2 Safety Culture or Align JV Climate Survey in 2025 - Present outputs and feedback via strategic HS2 programme level SHWELT forums	commencing 01/07/2025 to 30/09/2025 20/12/2025 28/02/2026	Initial GMR/Align report shared with SHWELT Safety Culture forum April 2025
3	- Engage our Black Hat and Leadership teams in Occupational Health hazard and awareness education and coaching - Incorporate our top 3 hazards from our Occupational Health Hazard Profiles and monitor threats and opportunities at the point of work - Deliver special editions of internal Safety Matters / Health Matters whole project communications to raise awareness - Identify Occupational Health milestones with local teams to celebrate success and improvement achievements	- Record of Health Hazard Profile information included in records of strategic and local SHWELT, Whiteboard and Lookahead forums - POWRA communications of OH hazards measured by Leadership Observation (LAMBO) - Increased proactive reporting of Occupational Health Exposure via HORACE / HSPI outcomes with celebrated success rewarded and noted.	commencing 01/06/2025 to 01/10/2025 31/08/2025 31/10/2025
