

RM3 – Align IPT Independent Safety Review – April 2023

Summary and Next Steps

Section Introduction

Introduction

Risk Management Maturity Model.

Developed by the Office of Rail and Road in collaboration with the rail industry, the Risk Management Maturity Model (RM3) encourages organisations to achieve excellence in health and safety management.

During the last quarter of 2022, the volume and severity of accidents in the Align IPT trended upwards.

Specifically, there were 6 RIDDORs between 29.09.2022 and 19.12.2022, one resulting in serious injuries.

The Align IPT looked for support from the Align JV partners, requesting an independent review to assess whether the Align IPT has a safety standard/culture problem and if so, provide improvement recommendations.

The review was conducted in two ways, via:

- an interactive online survey which gave multiple choice answers, allowing a selection of one response per question.
- face to face 'interviews' which allowed more interaction and understanding of the responses given, adding 'colour' to the survey responses.

Three different groups of personnel in Align were used:

- ❖ EXCO
- ❖ Middle Managers
- ❖ Black Hats and Workforce

The responses from the surveys and interviews were assessed by Katherine Winston and Jackie Coe (VolkerFitzpatrick Compliance Coordinators). They were then overlayed with each other to give a rounded and overall view from all participants in the review. These were then reviewed by Andy Battye. The results of this are shown later in this report in section 7.

RM3 describes what excellent management capability looks like by means of a five-point maturity scale, ranging from 'Ad-hoc' through 'Managed', 'Standardised', 'Predictable' and up to 'Excellence', as shown below. To map against the categories, the surveys and interviews were graded from Levels 5 to 1 as shown below.

The interviews were conducted by:

From HS2 Steve Fink (Head of HSS Operations)

Independent Dorian Colling (VolkerFitzpatrick Behavioural Manager)

Craig Peggie (SRM Technical Director)

Dean Murphy (Bouygues UK HSWQ Director)

Darren Carter (Jacobs Senior Associate Director)

Alan Swann (Deputy Health, Safety and Wellbeing Director)

Introduction & Why are you here?

Excellence	It is characteristic of processes at this level that the focus is on continually improving process performance through both incremental and innovative technological changes/ improvements.
Predictable	It is characteristic of processes at this level that, using process metrics, management can effectively control the AS-IS process (An "as is" business process defines the current state of the business process in an organisation). In particular, management can identify ways to adjust and adapt the process to particular projects, without measurable losses of quality or deviations from specifications. Process capability is established from this level.
Standardised	It is a characteristic of processes at this level that there are sets of defined and documented standard processes established and subject to some degree of improvement over time. These standard processes are in place (i.e. they are the AS-IS processes) and used to establish consistency of process performance across the organisation.
Managed	It is characteristic of processes at this level that some processes are repeatable, possibly with consistent results. Process discipline is unlikely to be rigorous, but where it exists it may help to ensure that existing processes are maintained during times of stress.
Ad-Hoc	It is characteristic of processes at this level that they are (typically) undocumented and in a state of dynamic change, tending to be driven in an ad-hoc, uncontrolled and reactive manner by users or events. This provides a chaotic or unstable environment for the processes.

Level	Survey	Interview
5	Strongly agree	Very good
4	Agree	Good
3	Slightly agree	Not so good
2	Disagree	Bad
1	Strongly disagree	Very bad

Number of responses from each group:

EXCO	16
Middle Management	221
Black Hats and Workforce	39

The response % rate from each group was as follows:

	Surveys sent	Surveys completed	% Response
EXCO	19	16	84%
Middle Management	453	221	49%
Black Hats and Workforce	97	39	40%

5.3 Who was interviewed?

The number of interviews that took place were as follows:

	Interviews
EXCO	12
Middle Management	27
Black Hats and Workforce	15

Section Executive Summary

Executive Summary & First Comms

The value of RM3 is in the discussions to be had around the findings of the criteria elements. RM3 is about **collaboration**. It is a blameless exercise that is not looking to catch anyone out, but to help those being assessed in pursuit of excellence.

In summary, Align IPT's management arrangements provide and maintain risk control systems that will protect the safety of people affected by the project's activities, the adoption of evidence-based evaluation of risk has achieved this.

The consistency, quality, quantity, and currency of evidence were considered before the maturity level was agreed upon – the evidence provided shows levels of maturity between "Predictable and Excellence", reinforcing the above statement.

Using the RM3 Management capability criteria shown on page 15 of this report, the surveys and interviews were mapped to provide the data in a similar way, assessed against each category and rated.

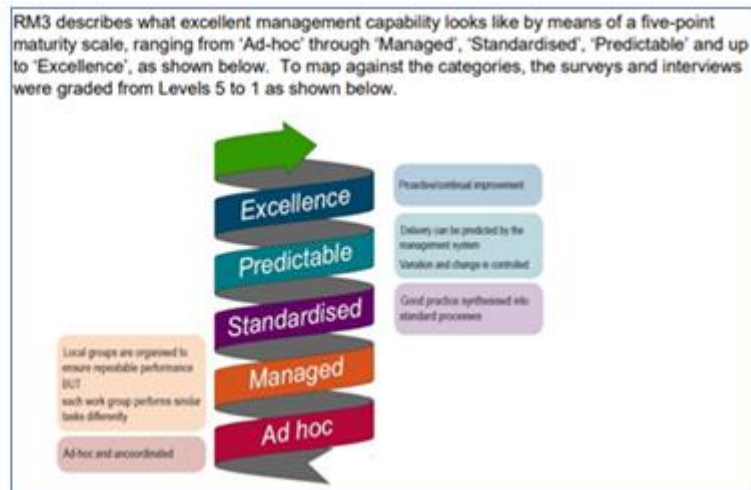

After the surveys and interviews were assessed, there were some key areas identified that would require some action from Align IPT to increase their level of maturity in that specific area.

Independent Safety Review

I'm sure you're sharing with me the disappointment related to our poor safety performance record in 2022 and my goal to ensure that ALL of you will go back home safe every day was not reached. As a result, during the first period of 2023, we requested an Independent Review of Health and Safety to be run across the project with leadership from our JV Parent companies and HS2 senior management.

We are pleased to state that we had a **good overall outcome** from the review.

We are well on our way to making Safety a success as a JV and reached an overall grading for almost all elements of the review of between Predictable and Excellence on the RM3 grading.

1/ General Comm following ISR : Done Below

2/ Review of Report by DAL/NHA/DVR/DJA : Done

3/ X Function Workshops organized by NHA/John S.Neale to complete before 7/04/23

4/ Action Plan Published on 12th of April.

You said:

- **We must** re-emphasize the message to all that Safety must have the correct status on the project, so that whilst achieving our desired productivity, we operate "Productively Safe".
- **We must** understand and deal with any fears associated with repercussions from raising Aim High observations or implementing SLAM and IMPROVE.
- **We must** clarify the health and safety roles and responsibilities for everyone.
- **We need to** consider if there are additional risks associated with weekend working and if there are, correct them.
- **We need to** communicate more key safety messages in multiple languages, so that everyone understands them.
- **We must** make sure that our bonus and incentive schemes, which include a safety portion, are well understood and do not discourage safety reporting or promote unsafe behaviours.
- **We need to** work with our teams and supply chain to ensure suitable/competent personnel are engaged in all key roles and safety critical positions.
- **We must** share more health and safety data specific to teams and locations.

Every individual engaged across the project will collectively and collaboratively have a part to play in achieving our improvement goals.

Over the next two weeks we will be establishing cross-functional workshops to review the outputs and to establish an action plan, to address the issues raised above. We will circulate and publicise the plan, and keep you updated on the progress made over the months ahead.

A further RM3 risk management review will take place toward the end of 2023 to determine if we are succeeding in responding to your feedback and gaining the improvement we all desire.

Daniel Altier,
Project Director

Section Key Risk Areas

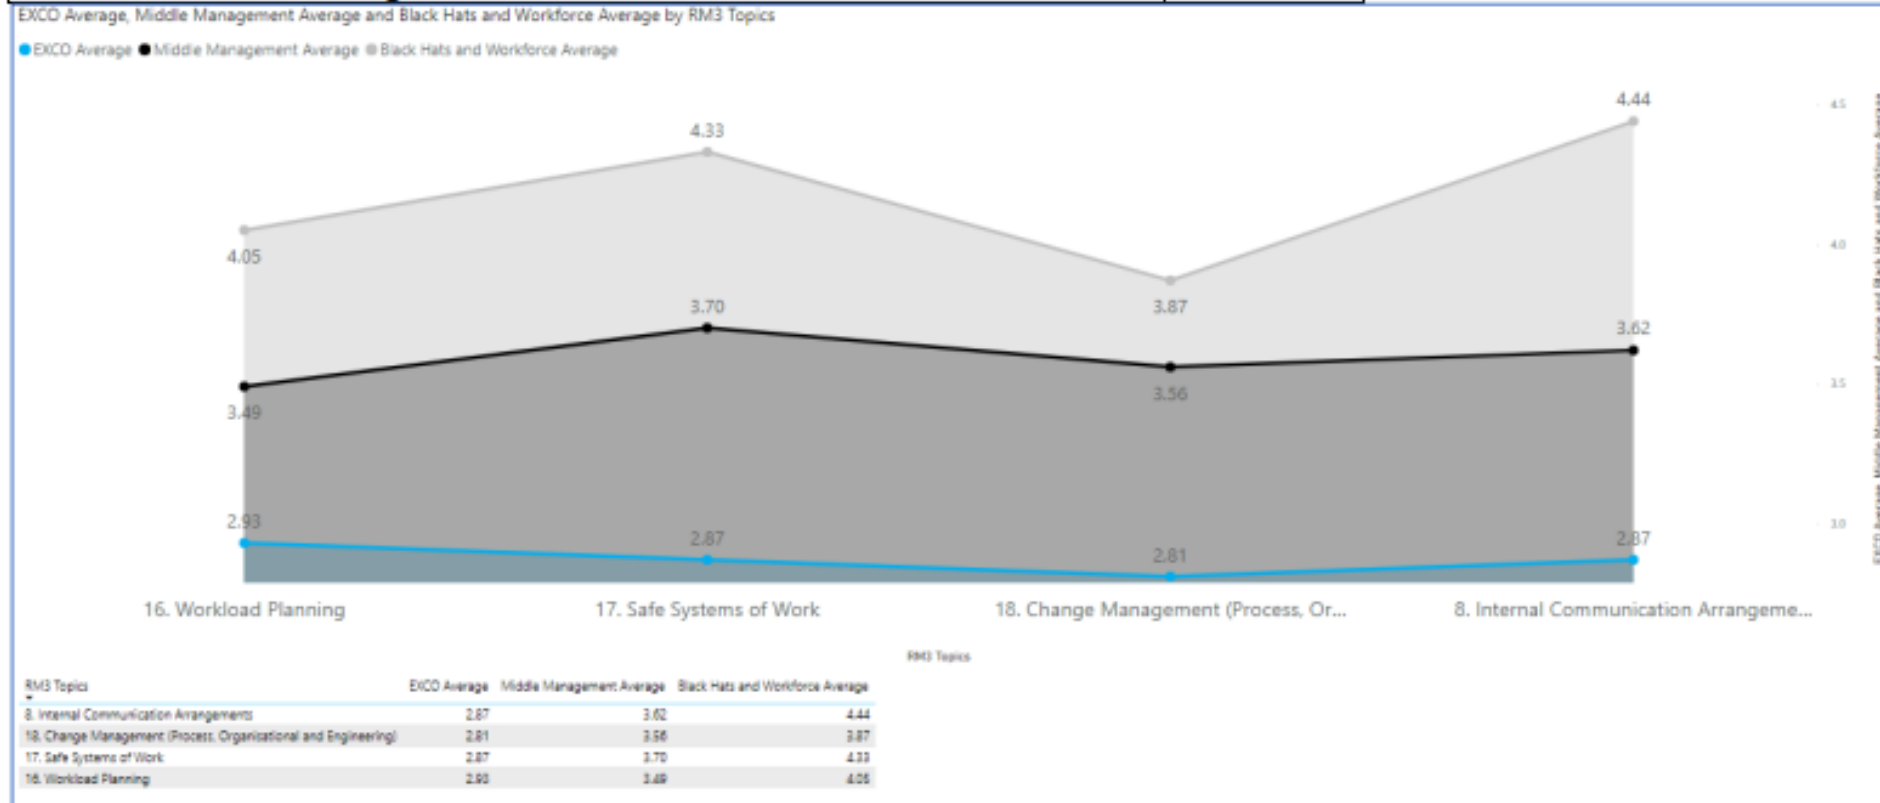

Key Risk Areas

The surveys and interviews identified different risk areas to be addressed:

Survey risk area	Interview risk area
• Change Management (Process, Organisational and Engineering) - EXCO	• Weekend working – EXCO
• Internal Communication Arrangements - EXCO	• Weekend working – Middle Management
• Safe Systems of Work (including Safety Critical Work) – EXCO	
• Workload Planning - EXCO	

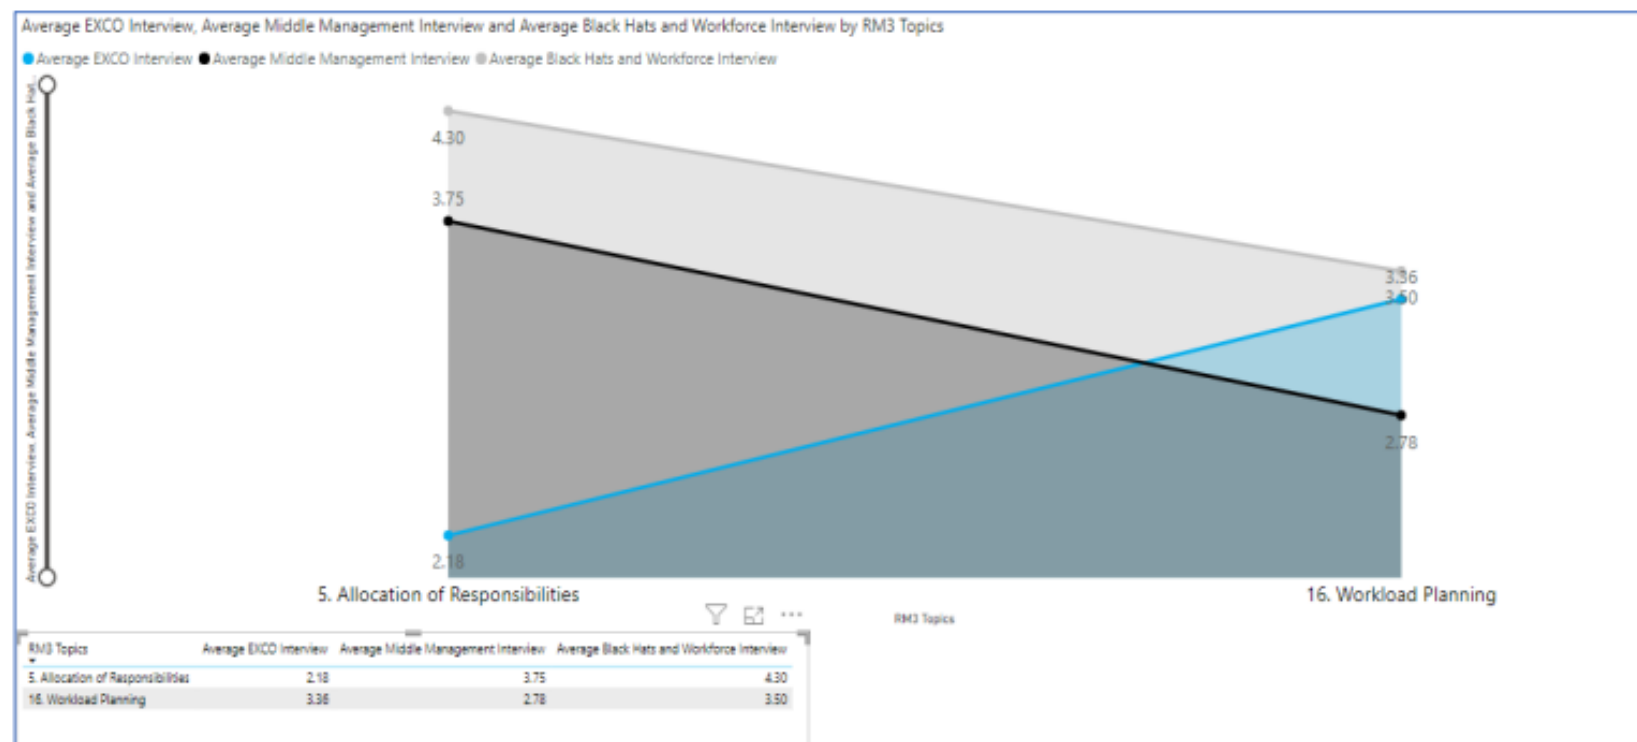

The following categories have fallen into the culture survey risk area as the EXCO have scored them on average under 3.00.

Category	Score
Q18. Change Management (Process, Organisational and Engineering)	2.81
Q8. Internal Communication Arrangements	2.87
Q17. Safe Systems of Work	2.87
Q16. Workload Planning	2.93

The following categories have fallen into the culture survey risk area as the EXCO and Middle Management have scored them on average under 3.00:

Category	Score	Mapped to Interview Section
Q5. Allocation of Responsibilities	2.18	EXCO - Weekend Working
Q16. Workload Planning	2.78	Middle Management - Weekend Working

These risks were identified as part of the Weekend Working category, even though identified within different groups i.e., Middle Management and EXCO

Key Risk Areas

Categories that scored less than 3.00 across the surveys and interviews, and therefore identified as risks are:

Category – Interview Risk Area	Key responses identifying risk	Score
<u>Weekend Working – EXCO</u> Survey Allocation of Responsibilities mapped to EXCO Interview Weekend Working Here we looked for the individual's perception. What is their opinion regarding weekend work? Do they believe that all works are adequately supervised? Questions were asked as follows: 1. During the periods of weekend working, do you believe that safety standards are being maintained and that the works are adequately supervised during this period? 2. In your opinion, do you believe that the project would benefit from an increase in attendance by health and safety management/advisors for out of hours working? 3. During the period of weekend working, are any Directors or Senior Managers in attendance at the project?	<i>"No and No – Tarmac incident demonstrated this".</i> <i>"No!! However, I am pushing a change to have adequate cover and log weekend works by Wednesdays – new process now in place. Needs some consistency and a health check on effectiveness".</i> <i>"NO! Productivity rated increased. Not enough people around to supervise but the behaviour needs attention as the mindset might be seen as urgent/ focused as it might".</i> <i>"Behaviour at weekends can be different to the week. Generally it is planned/ supervised well – but at a lower level but less work. On the reverse side of the coin – no meetings etc. give a positive time element not given in the week. Sub-contractors supervision is at a reasonable level".</i> <i>"Not clear – weekend/nights and major incidents are occurring out of hours – question is why do we get more done in these hours".</i>	Level 2 Managed 2.18

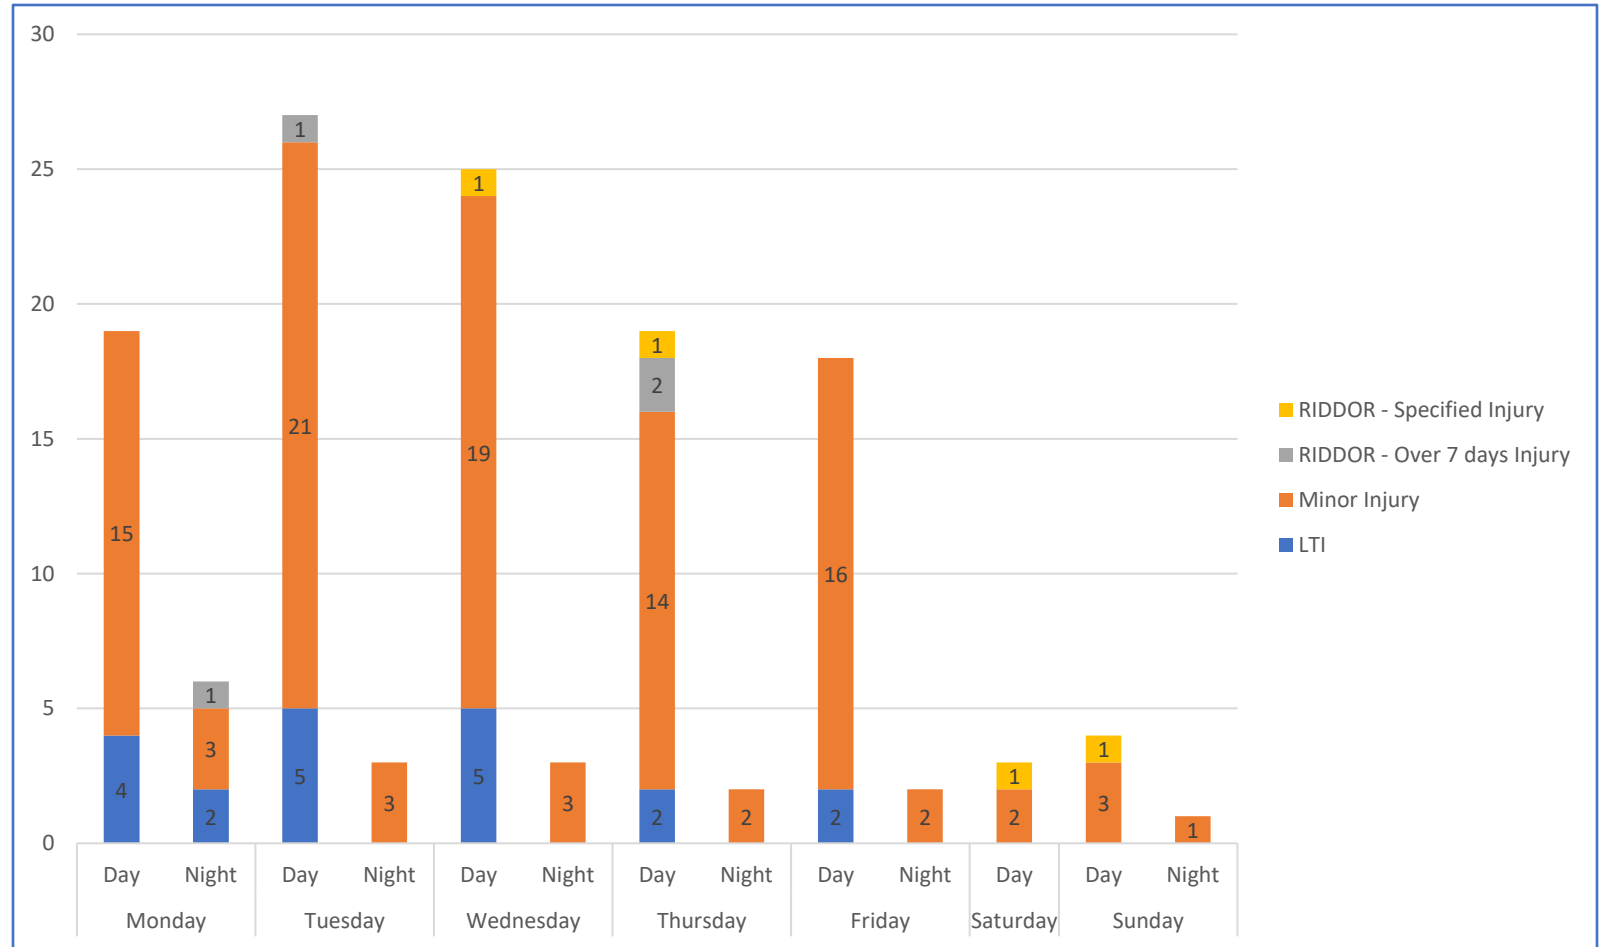

Key Risk Areas

Category – Interview Risk Area	Key responses identifying risk	Score
<u>Weekend Working - Middle Management</u> Survey Workload Planning mapped to Middle Management Interview Weekend Working Here we looked for the individual's perception. What is their opinion regarding weekend work? Do they believe that all works are adequately supervised? 1. During weekend working, do you believe that safety standards are being maintained and that the works are adequately supervised during this period?	<i>"I know that weekend works do not maintain safety standards and there is less supervisory staff".</i> <i>"I don't work at weekends, but I think there are different safety standards, I know it happens – in the tunnel, yes. There is less Supervision and Black Hat attendance at weekends. This may also happen at nights too but there is less free styling".</i> <i>"It is a risk that needs to be looked into. Mostly maintenance issues and do we give the same importance to this".</i> <i>"Many incidents are/have been happening on weekends/nights. Should Align have more supervision with safety understanding, available to lead".</i> <i>"At times some work is without Align supervision. Perhaps consider night shift safety role with competent staff. Could link to improved skills of Black Hats".</i>	Level 2 Managed 2.78

WEEKEND WORKING

12 MONTH WEEKEND WORKING INITIAL ANALYSIS

- In general terms we have 2500 (100%) personnel working Monday to Friday
- 1200 (50%) personnel regularly work on Saturday
- 550 (25%) regularly work on Sunday
- In terms of “Weekend” incidents:
 - 6% of incidents occur at weekends
 - 25% of RIDDOR incidents occur at weekends

Key Risk Areas

Category – Survey Risk Area	Score	Align Average Answer
EXCO Result Q. 18 Change Management (Process, Organisational and Engineering) Level 5 - Excellence There is an efficient approach to managing any process, organisational and engineering changes. There may be a structured approach to change, involving a few steps in the change-management system. There is a consistent approach to risk assessment and risk control after a change is made. The effect a change has on Align's culture is considered. The review is carried out after a change is structured to also consider the effect the change has had on the culture of Align. The importance of involving employees / work force in the change process is recognised to bring benefits. There is also an understanding that change affects other aspects of business. It leads to business risk being linked with health and safety risk during and as a result of any change. Level 1 - Ad Hoc Some types of change are recognised and aspects of it are managed. Not all risks associated with a change are identified and so are not controlled. The effect the change has on Align's culture is not considered.	2.81	Level 2 – Managed The importance of change management is understood and there is some degree of control over all types of change. Changes are planned but are not always adequate. There is no system for making changes, which leads to risks not being identified or controlled following a change. There is little consideration of the effects a change has on Align's culture.

Key Risk Areas

Category – Survey Risk Area	Score	Align Average Answer
EXCO Result Q. 8 Internal Communication Arrangements Level 5 – Excellence Communication arrangements are kept under regular review against identified good practice in other sectors. Level 1 - Ad Hoc There is little attempt to find or communicate information. If procedures are in place, staff make decisions based on their own judgement. No intelligence collected or shared. Managers do not talk to staff or talk ineffectively.	2.87	Level 2 – Managed Some procedures and standards relating to risk controls are available to staff. Some information is used to guide decisions. Managers give instructions and receive reports relating to controlling risks, but there is a lack of consistency.

Key Risk Areas

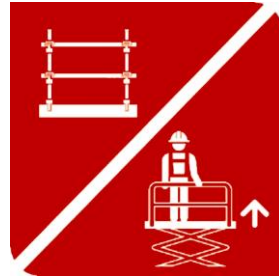

Category – Survey Risk Area	Score	Align Average Answer
EXCO Result Q. 17 Safe Systems of Work (including Safety Critical Work) Level 5 – Excellence The systems of work are used to both implement risk controls and get feedback on how adequate they are. Changes to the systems of work are checked carefully and are well-managed. They produce the result that was predicted before the change was made. Extensive consultation is carried out with those affected by the systems. A commitment to continually improve the systems by, for example, benchmarking within and outside the industry. The systems have the best possible blend of processes, plant, and people to achieve excellent results, delivered efficiently and safely. Level 1 - Ad Hoc The systems of work actually used are not the same as the written procedures. The systems of work do not take account of risk, and tasks that are critical to health and safety are not always identified and prioritised.	2.87	Level 2 – Managed Systems of work are in place but there are clear differences in how they are applied across Align. The systems are sometimes less than adequate because the procedures cause mistakes or are not effective in achieving the intended result. Work that is critical to health and safety is recognised but is not managed consistently.

Category – Survey Risk Area	Score	Align Average Answer
EXCO Result Q. 16 Workload Planning Level 5 – Excellence The planning system includes regular reviews of workload at different levels of management. Extra work is planned, and care is taken to make sure that nobody is overloaded with work. Align’s culture is perceived as just. More focus on identifying good practice in other organisations, where appropriate. Level 1 - Ad Hoc There is little or no control of workloads. Some people are overloaded while others are lightly loaded. There is evidence that poor performance in carrying out tasks is due to not enough time being given and tasks which are critical to safety not being prioritised properly.	2.93	Level 2 – Managed Workloads vary, but some thought has been given to allocating tasks in a way that aims to even the load. Tasks which are critical to safety are prioritised. Workloads are not reviewed to monitor areas of overloading.

Section

Reviewer Recommendations

Recommendations

During the interviews, comments were noted which we would recommend Align IPT address as part of their action plan.

Action area	Areas to be addressed
Weekend working	How can Align IPT understand the correlation between weekend working and accident data to identify route causes?
Safety stats	During interviews, there were examples of the Health & Safety team owning the safety data. How can Align IPT share the data operationally to help change the cultural behaviour to improve safety overall?
Incentive schemes	How do RIDDORs affect bonuses paid?
Safety, Quality and Production	During interviews, there were examples of project priority being production over safety. How can Align IPT ensure that safety takes priority over production?
Competence	How does Align IPT assess and audit competence of project resources? Interviews identified project resources were incompetent or not necessarily fully trained for the role.

Action area	Areas to be addressed
Who is responsible for Health & Safety?	Interviews showed that there were beliefs that specified individuals were responsible for health & safety, rather than everyone. How can Align IPT change the culture to make sure everyone knows they are responsible for safety?
Safety stand downs	How will Align IPT ensure effective involvement from their supply chain partners as part of their journey to improve safety stand downs?
EXCO engagement	How can Align IPT ensure EXCO visits to the projects are more engaging with the workforce to make them feel there is commitment and support from EXCO?
SLAM	Is SLAM the answer to the behavioural culture? If so, how can Align IPT sell the confidence to use SLAM?
Safety overall	During interviews there were many comments regarding the safety of the launching girder. What will Align IPT do to ensure the launching girder is fully safe to operate?
AIM High	How can Align IPT improve feedback to AIM High observations?

Section Graphs

Black Hats and Workforce

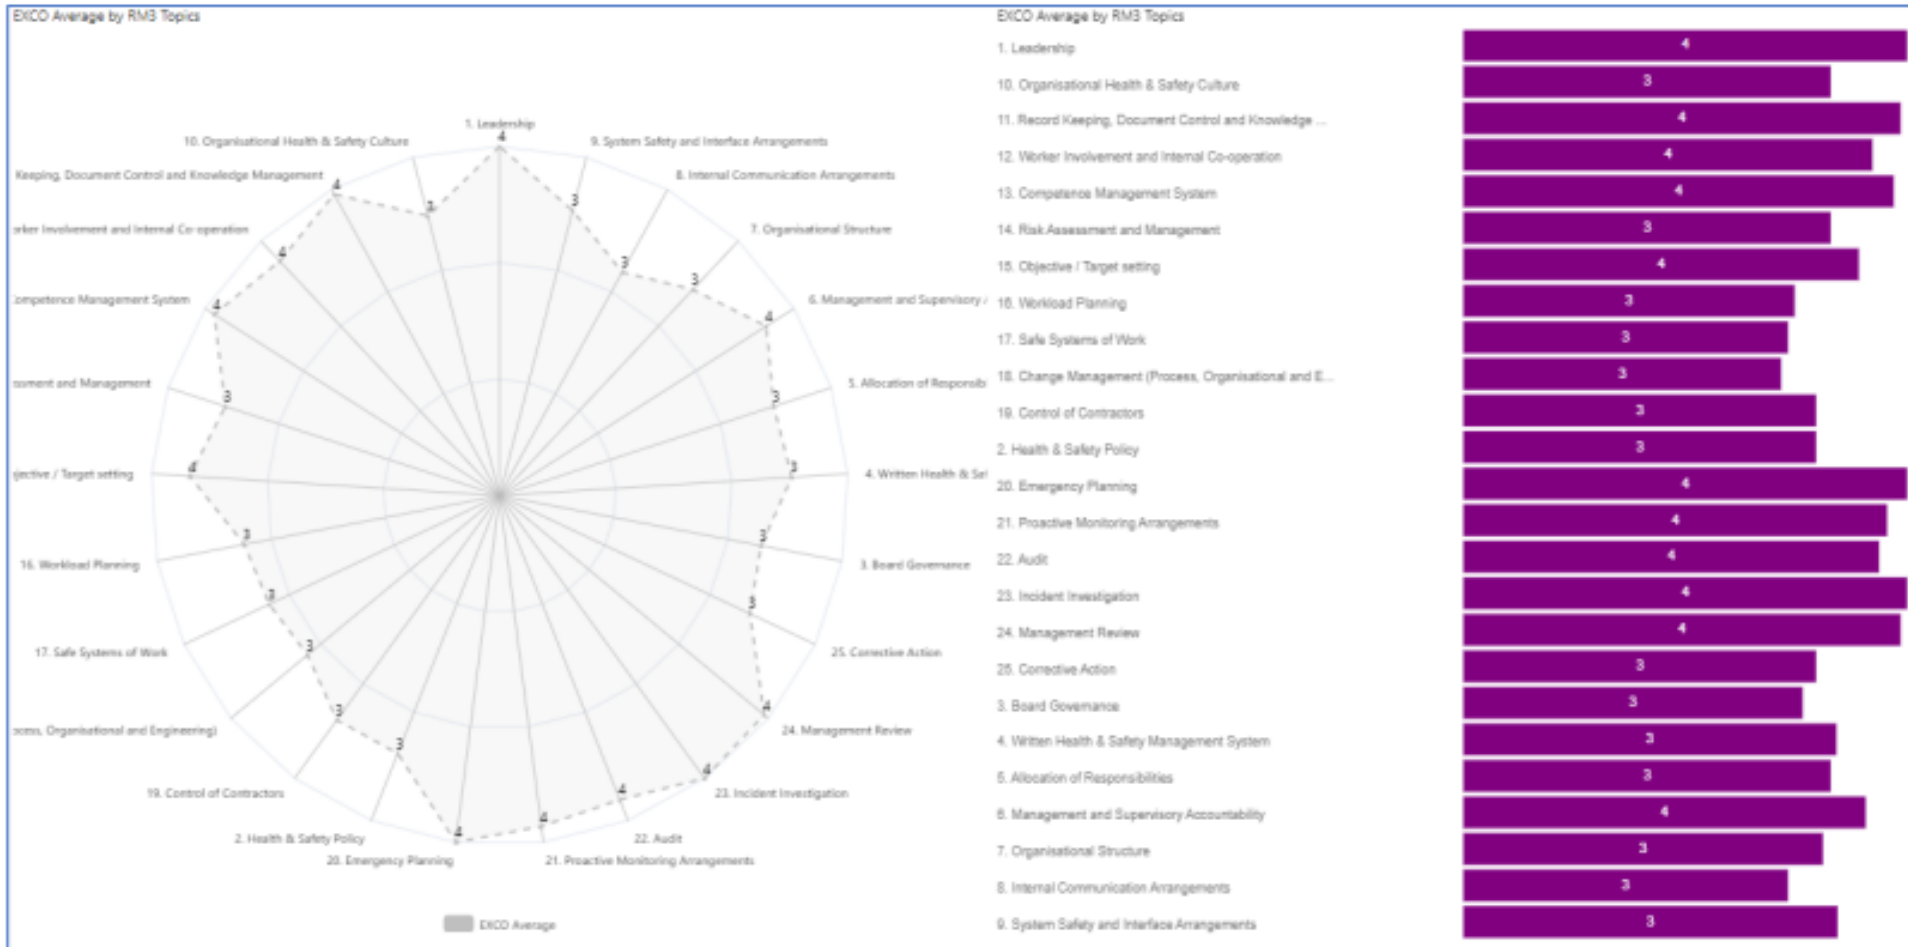

- The highest average score **4.87** was given by the Black Hats and Workforce for Q7 Organisation Structure
- The lowest average score **3.54** was given by the Black Hats and Workforce for Q19 Control of Contractors

Middle Management

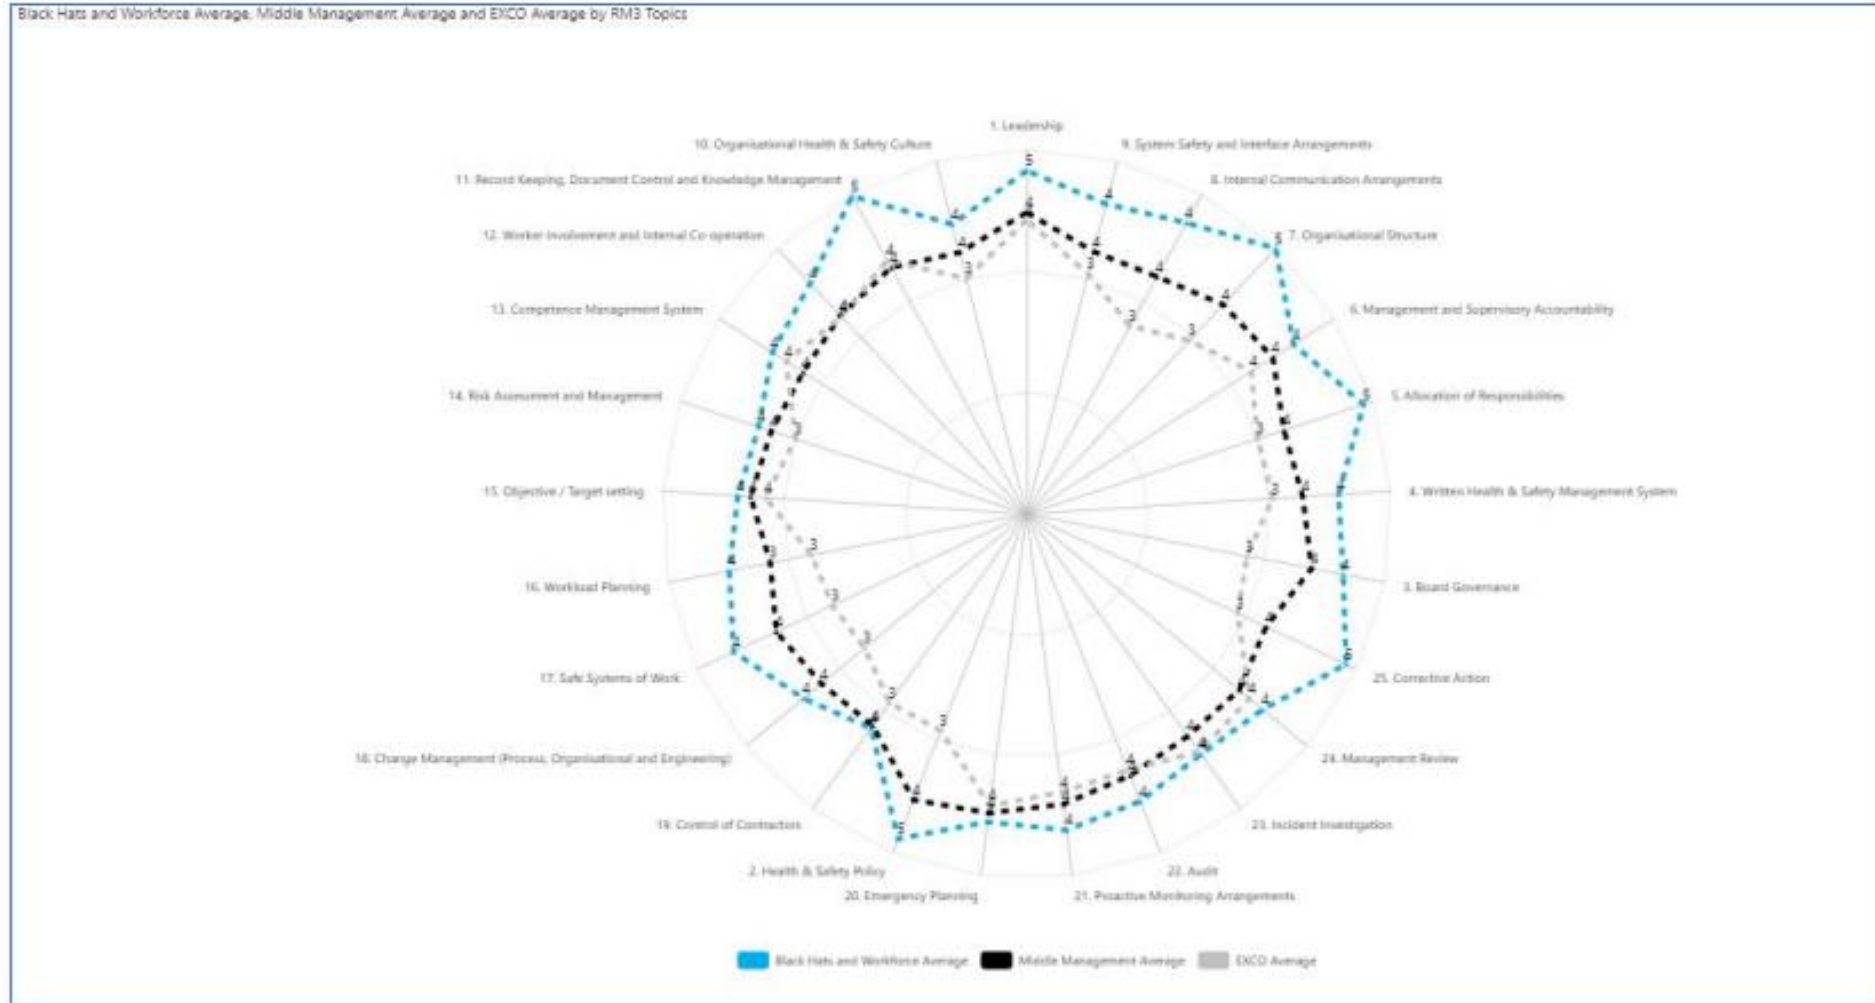

- The highest average score 4.11 was given by the Middle Management for Q2 Health & Safety Policy
- The lowest average score 3.49 was given by the Middle Management for Q16 Workload Planning

EXCO

- The highest average score **3.93** was given by the EXCO for Q1 Leadership, Q20 Emergency Planning and Q23 Incident Investigation
- The lowest average score **2.81** was given by the EXCO for Q18 Change Management (Process, Organisational and Engineering)

If all the survey results are overlayed, the comparison between each group is:

15 Interviews were carried out across the Black Hats and Workforce team. The interview consisted of 11 sections covering:

- ❖ Safety rules and measures
- ❖ Senior Managers relationships
- ❖ Information and its availability
- ❖ Balance between schedule and safety
- ❖ Empowerment
- ❖ Having a voice
- ❖ Safety stand downs
- ❖ Behavioural culture – SLAM
- ❖ Safety overall
- ❖ Weekend working
- ❖ AIM High.

The sections of the interview were mapped across to the 25 culture survey topics so that we could share a comparison of survey data and interview feedback data.

The interview responses were scored using scoring levels Level 5 – Very Good down to Level 1 – Very Bad.

The following areas were scored at least **two levels lower** in interview responses than they were in the culture survey data.

Interview section	Mapped to question(s) in the cultural survey
Aim High	Q25. Corrective Action
Safety rules, measures	Q2. Health and Safety Policy and Q11. Record Keeping, Document Control and Knowledge Management

The following areas were scored at least **one level lower** in interview responses than they were in the culture survey data.

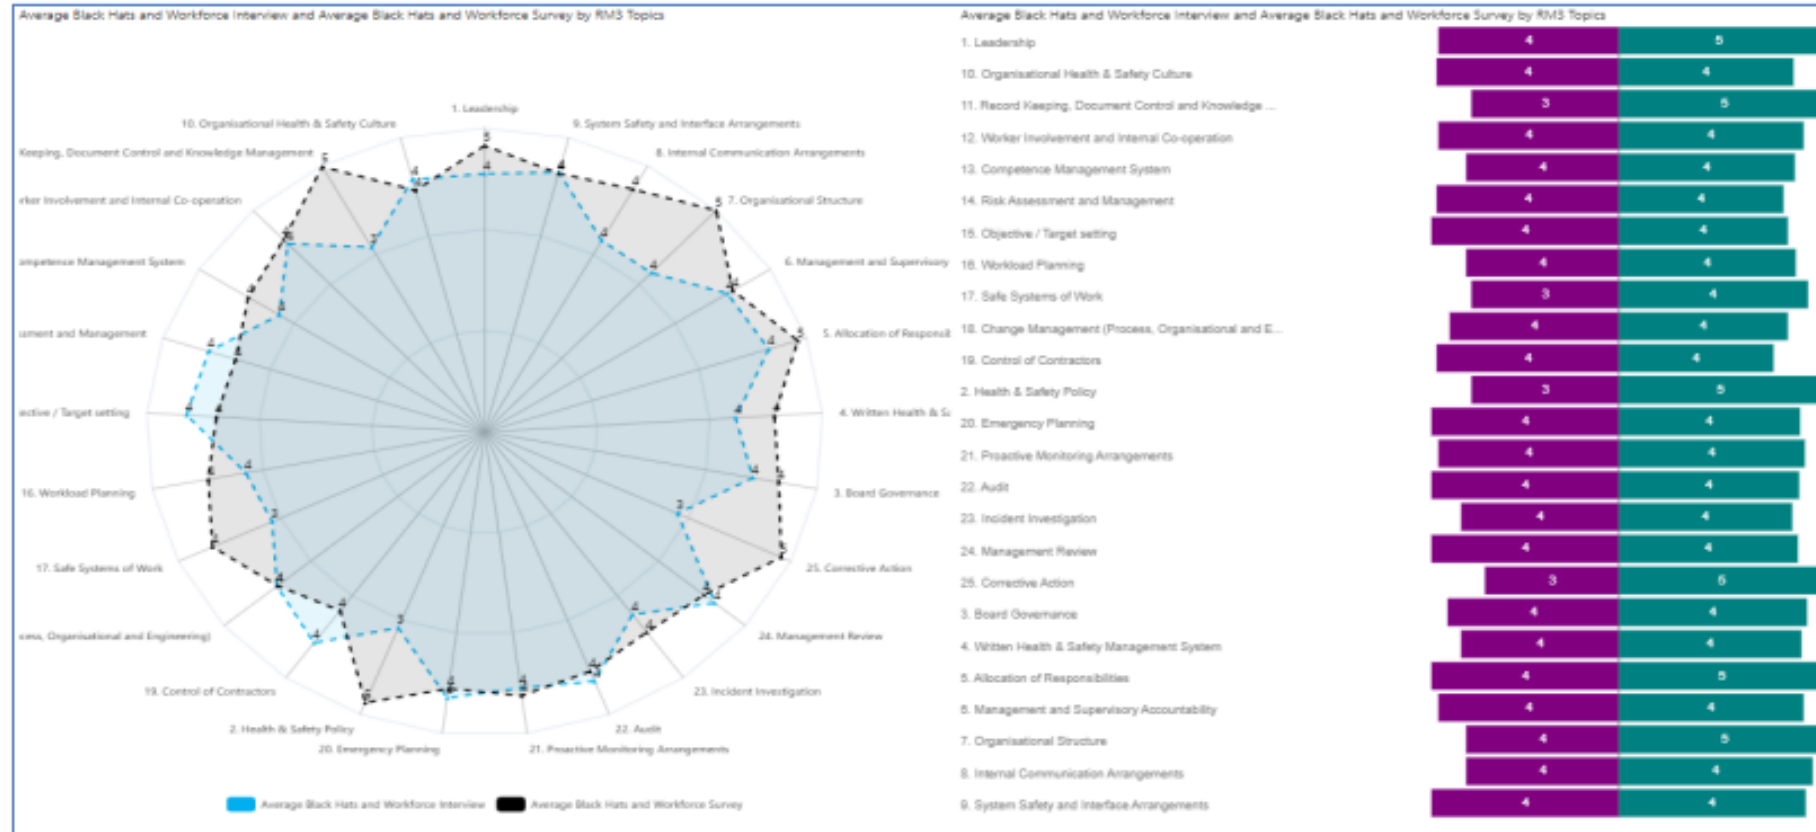

Interview section	Mapped to question(s) in the cultural survey
Safety Stand Downs	Q7. Organisational Structure
Having a Voice	Q1. Leadership
Senior Managers relationships	Q5. Allocation of Responsibilities

7. INTERVIEW STATISTICS COMPARED TO SURVEY STATISTICS

The qualitative results from the interview showed different results to the surveys. A Radar chart visual was created in Power BI for each category, reporting to show the average results for both interview and culture survey responses.

Please note – the radar chart data responses are rounded to the nearest number. However, the radar chart will recognise the real data number and place them accordingly on the radar chart. E.g. '3.49' will be placed slightly outside '3.10' however, both are rounded down to '3.00'.

Black Hats and Workforce

Any differences in the results between the survey and interview indicate improvement intervention areas e.g., Corrective Action, Record Keeping, Document Control and Knowledge and Health & Safety Policy.

27 Interviews were carried out across the Middle Management team. The interview consisted of 11 sections covering:

- ❖ Culture – having a voice
- ❖ Policy and procedures engagement
- ❖ Consultation
- ❖ Balance between schedule and safety
- ❖ Behavioural culture – SLAM
- ❖ Roles, responsibilities and accountabilities
- ❖ Safety stand downs
- ❖ Safety initiatives
- ❖ Safety – overall
- ❖ Weekend working
- ❖ AIM High

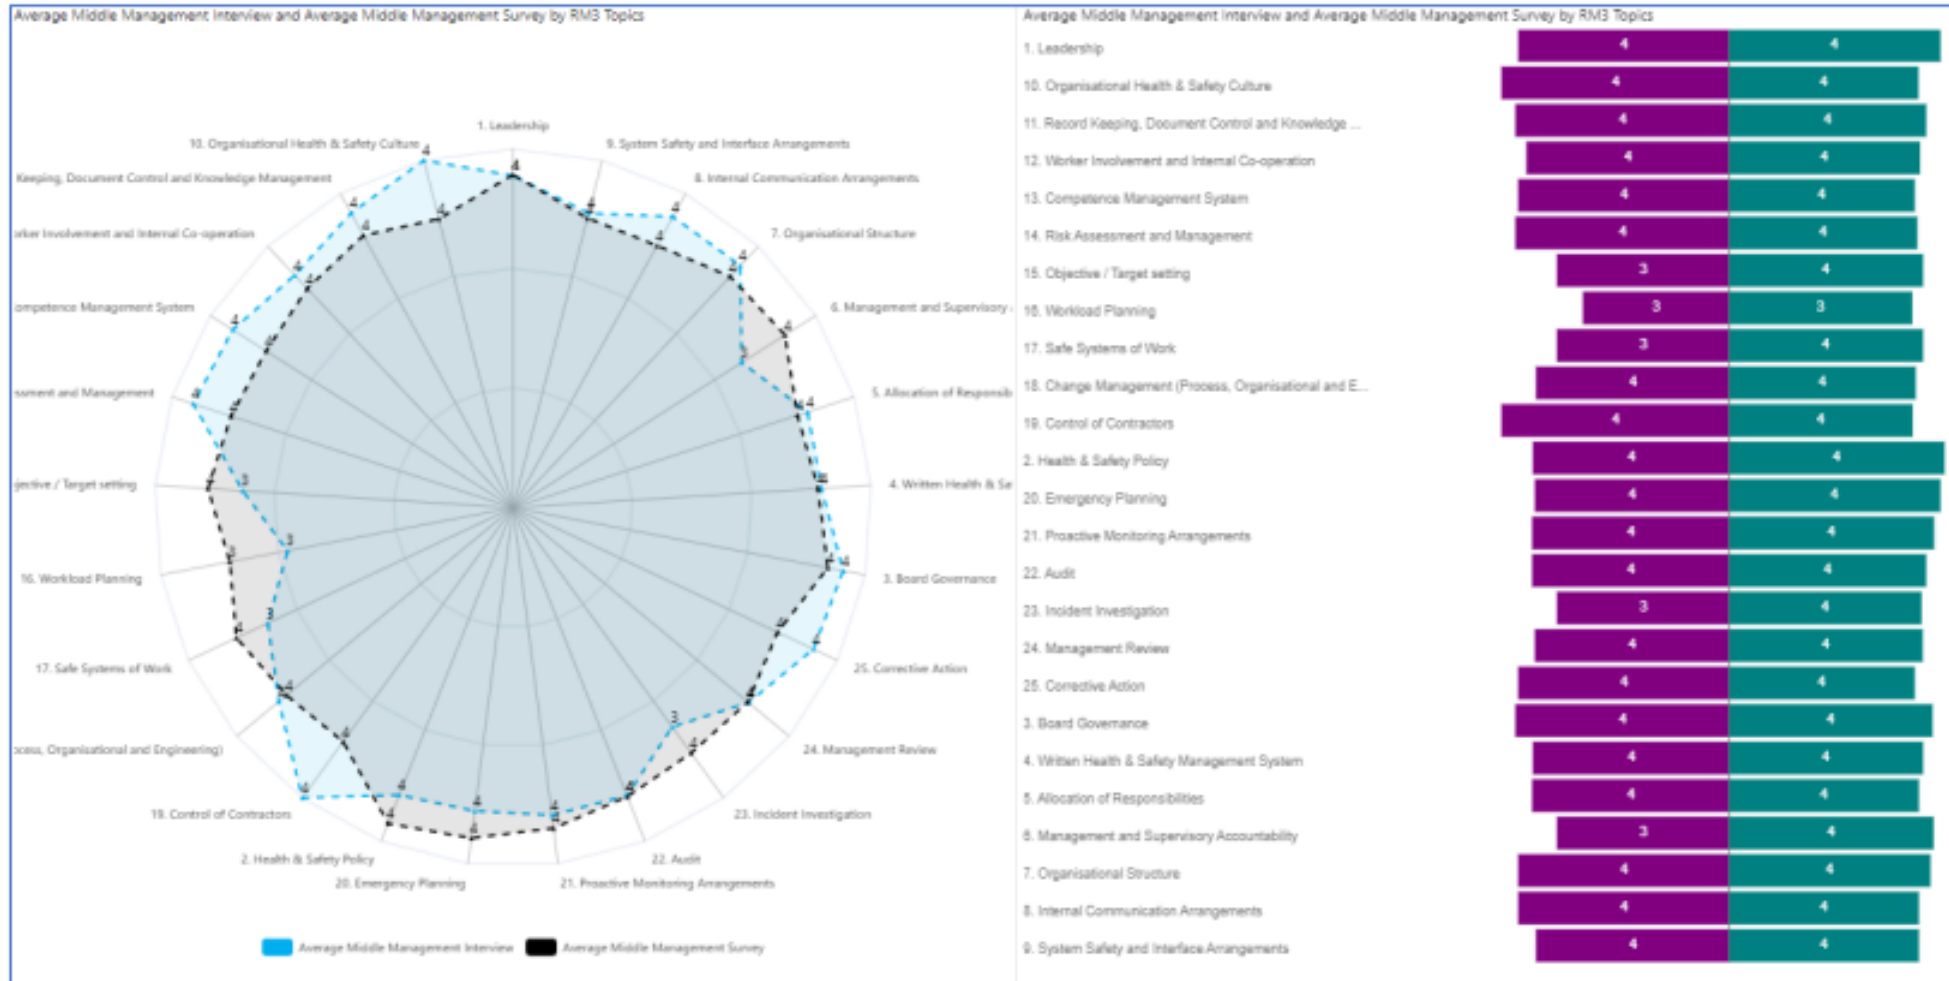

The sections of the interview were mapped across to the 25 culture survey topics so that we could share a comparison of survey data and interview feedback data.

The interview responses were scored using scoring levels Level 5 – Very Good down to Level 1 – Very Bad.

The following areas were scored at least **one level lower** in interview responses than they were in the culture survey data.

Interview section	Mapped to question(s) in the cultural survey
Balance between schedule and safety	Q15. Objective / Target Setting Q17. Safe Systems of Work
AIM High	Q6. Management and Supervisory Accountability Q23. Incident Investigation

Middle Management

Any differences in the results between the survey and interview indicate improvement intervention areas e.g., Objective/ Target Setting, Safe Systems of Work, Management and Supervisory Accountability and Incident Investigation.

12 Interviews were carried out across the EXCO team. The interview consisted of 11 sections covering:

- ❖ Leadership
- ❖ Policy and procedures engagement
- ❖ Consultation
- ❖ Balance between schedule and safety
- ❖ Behavioural Culture – SLAM
- ❖ Embracing and supporting the behavioural programme
- ❖ Safety stand downs
- ❖ Safety initiatives
- ❖ Safety overall
- ❖ Weekend working
- ❖ AIM high

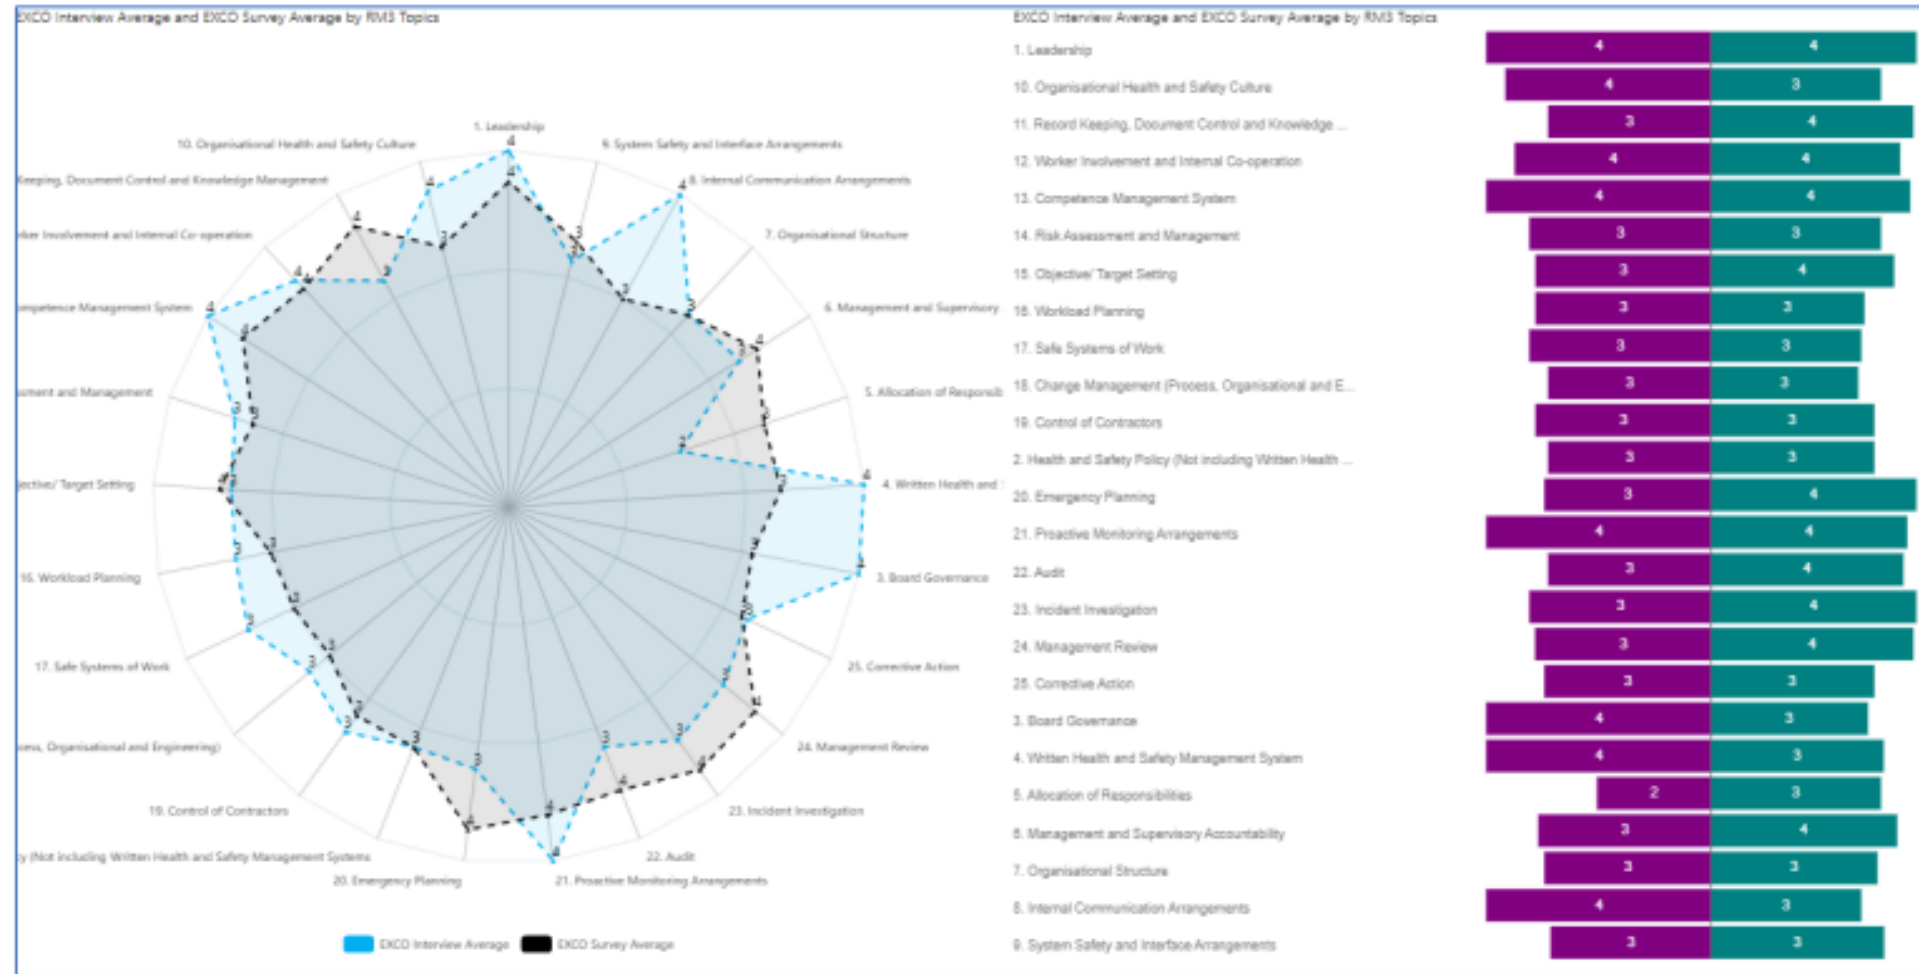

The sections of the interview were mapped across to the 25 culture survey topics so that we could share a comparison of survey data and interview feedback data.

The interview responses were scored using scoring levels Level 5 – Very Good down to Level 1 – Very Bad.

The following areas were scored at least **one level higher** in interview responses than they were in the culture survey data.

Interview section	Mapped to question(s) in the cultural survey
Leadership	Q3. Board Governance Q4. Written Health and Safety Management System Q8. Internal Communication Arrangements

EXCO

Any differences in the results between the survey and interview indicate improvement intervention areas e.g., Allocation of Responsibilities, Management and Supervisory Accountability, Organisational Health and Safety Culture, Record Keeping, Document Control and Knowledge Management, Audit, Objective/ Target Setting, Emergency Planning, Incident Investigation and Management Review.

Section Common Themes

Common Themes from Interviews

During the assessment of the interviews, some common themes came through from all three groups. The themes are shown below with the commentary in blue giving some reasoning as to why these issues were raised. The comments are taken from the interview reports received and reviewed by VFL.

These themes should be used as areas of development.

	EXCO Themes	Middle Management Themes	Black Hats and Workforce Themes
Weekend working	Weekend working safety standards can be compromised. Recent tarmac incident evidence of this. Not enough supervision, behaviours need attention. Productivity rated increased over the weekend <i>"question is why do we get more done in these hours?"</i>	Weekend working safety standards can be compromised. Weekend works do not maintain safety standards and there is less supervision and Black Hat attendance at the weekends. Mostly maintenance issues and do we give the same importance to this.	Weekend working safety standards can be compromised. Compromised by attitude (different one) for weekend work. <i>"You know as well as I that certain things get done on a weekend that don't get done during the week. Safety 10/10 during the week 8/10 at the weekend"</i>.
SLAM	SLAM – needs a reset and ensure understanding SLAM - need to reset and push a Behavioural journey with a clear and simple plan that everyone understands. One EXCO suggested reward/ recognition for stops. "It's easy for management to say stop, difficult for tier 2, 3 and the workforce".	SLAM - Fear culture of utilising SLAM is not working as the culture of fear/ production prevents instinctive belief/ use. If the workforce are not feeling comfortable stopping the work they will never do it. Teams raise issues with supervisors if they need to – do not invoke SLAM most of the time.	SLAM - Fear culture of utilising The workforce sees the benefit and like the programme but they need to feel confident to use. Must be used as a benefit and not as a punishment. Multi-cultural issues raised with some individual's focus being just on delivery, it's not in their culture to stop work to improve safety.

Common Themes from Interviews

	EXCO Themes	Middle Management Themes	Black Hats and Workforce Themes
AIM High	AIM high not used to its fullest potential The biggest issue reported across the EXCO is not using data to trend. Data needs to be captured and purposeful.	AIM high not effective. AIM High is not understood and confusing to many people. It must be communicated and positioned to be mature and effective. There are reports of the teams being suspicious of being associated with the observations. AIM high and Dallux conflicts. Issues tend to get fixed when raised and don't then get input into the system. Some have suggested for the AIM high to be reactivated on card basis.	AIM High - some resistance to using as having to use via personal phone. Also culture of feeling like a trouble maker raising. Dallux system captures observations and teams don't then input into AIM High. In summary, not enough workforce input information into AIM high. Therefore, a lack of visibility of issues across the programme.
Safety stats/ AIM High feedback		Safety stats/ feedback to be shared, AIM High etc. There is no breakdown of AFR for each area and safety stats/ KPIs for trends would be great. Lack of AIM High feedback. Not getting proper AIM high feedback means they are unsure whether it has dealt with and creates a lack of buy in. It would be also useful to see other areas of the business general data/ observations and trends.	Safety stats/ feedback to be shared, AIM High etc. Many did not receive feedback from AIM high observations. View is that without AIM high feedback, it is unlikely that the project team will complete again.

Common Themes from Interviews

	EXCO Themes	Middle Management Themes	Black Hats and Workforce Themes
<i>Incentive schemes</i>	Incentive schemes seem to be more focused on production. Safety incentives would be beneficial. Incentive schemes can drive the wrong behaviours. There is a need to measure what this incentive means to behaviour and link part to improved safety performance.	Incentive schemes seem to be more focused on production. Safety incentives would be beneficial. Many were not entirely sure about incentive schemes. While others felt that bonus given to teams is cherished above all and barrier to active safety interventions. Words on poster/charter are not taken as seriously as protecting bonus at all costs.	Incentive schemes seem to be more focused on production. Safety incentives would be beneficial. Feedback that many do not receive bonus and feelings that all should get, not just some. Some of the workforce believe this to be divisive. Many believe that bonus' should be given for safety performance. However, on the other hand others feel that bonus related to safety would be dangerous and damaging to the project as they believe people would not report.
<i>Safety stand downs</i>	Safety stand downs need to be more targeted to the audience. Beliefs that the workforce do embrace the stand downs. However, safety stand downs need to be more targeted to the audience. They must be linked to the sites, make relevant the message to individual groups but involve everyone. Beneficial to initiate Senior Managers to take the lead in getting the workforce to suggest what would be good for them.	Safety stand downs need to be more targeted to the audience. Safety stand downs need to be related to the project's tasks. Fitting the audience is key. A more focused approach would be much better Appreciating different work, different skills, different levels of understanding. Sharing experience/ lessons learnt works very well.	Safety stand downs need to be more targeted to the audience. Safety stand downs need to be more targeted to the audience. The workforce would like to be more involved. Interaction with teams is important. They feel that the stand downs are not always useful, mandatory messages are not always relevant to their works.

Seems to be some confusion between reward / recognition and bonus scheme

Common Themes from Interviews

	EXCO Themes	Middle Management Themes	Black Hats and Workforce Themes
English language issues	Interpreters used for communication with non-English speaking workforce.	Attend safety stand downs – perhaps message is a bit lost with those whose first language is not English.	Multicultural language and behaviours issue - behaviours and expectations are lower. Communication with multicultural teams is an issue. Need to force a change.
Safety, Quality and Production	<i>"We are very productivity driven".</i>	Priority is production over safety Many feel that the project focus prioritises production over safety. Perception of production first need to be managed by Black Hats	Priority is production over safety There are many reports that safety has improved in 2023. However, the belief is still that the projects priority is production over safety.
Competence		Got to put safety with training – big lack of training particularly relating to rigging/ lifting. Lack of competence from a lot of new starters coming in.	Biggest concern here is poorly trained individual, feels like desperation to just get enough resource in. Across the programme.
Black Hats		Black hats need support in communication and skills in management. Some Black Hats are at different levels and need support/ training to advance.	Black hats need support and training with communication, persuasion, and influence. Regarding VSL Black Hats complaint that there needs to be a consequence attached to poor behaviour. VSL need to get their Black Hats into a better space.

Common Themes from Interviews

	EXCO Themes	Middle Management Themes	Black Hats and Workforce Themes
<i>Safety initiatives</i>	Safety initiatives should be reduced and more focused. More effort to be put into making an initiative properly implemented. Pause and think through making it work and a success. Need hard hitting messages but part of a proper plan with purpose and timeline. Keep it very simple – tailor language to engage groups to contribute. Plan to keep momentum that it is key that safety remains number one.	Safety initiatives should be reduced and more focused. Too complicated, make messages simple. Behaviour change is key - keep things simple. Find a way to improve explanation of the initiatives to the operatives.	
<i>Simplify RAMS</i>		Simplify paperwork (RAMS) Must be specific to key points. User friendly documentation is important but fully documented information is also important. Finding the right balance is key.	Simplify paperwork (RAMS) They are far too complicated. If you throw too much information at someone, they cannot be expected to understand the information.
<i>Who is responsible for H&S</i>		There are beliefs that specified individuals are responsible for project Health & Safety rather than everyone.	

AIM HIGH

A1 Black Hats and Workforce interview comments

Workforce Feedback – AIM High

Q. Do you and your team see the benefits of raising AIM High observations as a positive?	Top 5 Answers	Bottom 5 Answers
	100% we see the benefits. Good for seeing patterns.	Still a bit of fear culture that filling in observations is going to backfire on them. Need to build trust to improve.
	Used it a while ago. Yes, think it's positive but to raise good practice. When some people scorned/ let go, they can use it negatively.	Concerned of the delay between raising an AIM High and solving/communicating the issue.
	It helps and is meant to give good ideas to improve things. I am pleased it is not used as a number gathering – do so to understand and do immediate corrective actions.	Dallux captures observations we don't then input into Aim High.
	Raising positive and improvement opportunities for everyone	Don't think it's been rolled out properly or trained in effectively. Need to encourage people/ educate rather than mandating it. Aim High app – often just the wrong stuff being put in. Should we set a target for putting observations in?
	Use card/app to raise observations and have raise 300ish this month	Not much

EXCO Feedback - AIM high

Q. What can you tell me about the AIM High Programme.	Top 2 Answers	Bottom 4 Answers
	It allows people to raise observations. It is highly promoted and well embraced.	Needs to aim higher! Needs to work properly and be handed over to a tech team who can make sure data is dynamic and purposeful. We must go to cards until hit the aims.
	It gives everyone a voice and allows to feel empowered to speak up on matters of concern. It lets the workforce know that we care. It allows to be better equipped to manage.	Aim high.... Issues closed out, but not sure how well they are closed out and not sure what we have learnt.

Middle Management Feedback - AIM High

Q. Do you see the benefits of raising AIM High observations as a positive?	Top 5 Answers	Bottom 5 Answers
	It's our way of raising awareness. It empowers the individual to manage safety and to raise concerns when needed.	Aim High covers everything and nothing. Must be improved and can do better.
	Achieve the best way – Aim High, zero accidents, better programme and cost control.	Aim High is not understood and confusing to many people. It must be communicated and positioned to be mature and effective. Move to positive outlook information.
	Be the best, do your best, not just what you need to do - above and beyond.	I don't feel there are any positive benefits of raising AIM High observations nor have I raised any. I do receive them and I know I need to answer but see it as a tick box exercise. Although, from an operative view it is great and communicates well.
	Always – it identifies trends and trends result in things getting fixed – very positive. I try to get my foremen to record things they fix as a matter of course – shared on whatsapp group too, then we can capture them	Not prepared to use – work phones are/ have to be paid for by teams who do not want to use own data. WIFI was withdrawn so environment for use is not a good one. Needs to be reactivated on card basis.
	Good initiative, opportunity for people to express themselves. Some resistance to raising initiatives and using a personal phone and familiarity with technology.	Not getting proper feedback means you are not sure if it is dealt with.

Workforce Feedback – Safety rules, measures

Q. Has anyone fully explained the safety rules that are necessary when delivering your work?	Top 3 Answers	Bottom 5 Answers
	Fully explained and Justin gives a good background and help.	No, learnt as I've gone along, learnt values as well myself.
	Top notch – very good	No not really. None explained to me. Confident in my own ability
	Arrangements here are just right, not over the top	Labour being brought onto the job are generally unskilled, send remits to labour providers. Not paying enough to get skilled labour. Too much focus on getting bums on seats rather than getting the right people. Even now we've got mechanical fitters that are carpenters actually carpenters by trade.
		The paperwork needs to be simplified – copy and paste need to improve that.
		Not enough and given enough time to contribute.

Middle Management Feedback - Policy and Procedures Engagement

Q. Are you informed of the content of the health and safety policy and procedures, and if so, who briefs you?	Top 4 Answers	Bottom 5 Answers
	Mandatory, a must have, this is a basic requirement. The site is generally, safety focused, safety first.	I think the procedures are housed in the software portal, but I don't and don't think they are accessed often.
	Made aware – through RAMS briefings, and by Ops, if changes to policies and procedures are made	No not yet – had to raise hand to be inducted on emergency response.
	Just a notification that the policy/procedure has been updated but brief or summary of the update. Good practice that started at the beginning of covid to issues safety docs on a particular activity and then test the workforce.	Don't really know about the Health & Safety documents too much.
	Yes, have opportunity for input	Can't recall being shown this Had to find it to issue to subs Business Collaborator very difficult to use. Having an Align Safety folder would really help with this, somewhere all the key documents are kept and accessible– this is not in place to my knowledge – could be searching for two days to find key docs.
		No

POLICIES AND PROCEDURES

Workforce Feedback – Information and its availability

Q. Are you and other members of your team familiar with the project policies and procedures?	Top 5 Answers	Bottom 5 Answers
	I understand them and share with other. It is part of my job.	Some but not all. Safety team at centre are in a different world and do not approach the teams to understand what works and what does not.
	Standard of safety very high on this project.	I've generally found out where processes are such as lifting by talking to lifting manager. Role not mapped out with competencies, just got brought on and cracked on. Not enough vocational training, on the job as well as classroom.
	Yes.	Need to constantly work on the basics. Some of the teams have worked across the world so their behaviours and expectations are lower. They are getting there but work still needed.
	I am responsible for briefing my team and making them familiar.	RAMS are written and leaders help in briefing them and get them understood. Keep it simple and sometimes is overloaded with detail.
	Briefed out through safety meeting structure.	Not really – get everything from RAMS.

Q. Are you informed of the content of these documents, and if so, who briefs you?

EXCO Feedback - Policy + Procedures Engagement

Q. Are you informed of the content of health and safety policy and the associated procedures, and if so, who briefs you?	Top 3 Answers	Bottom 4 Answers
	Yes, I am informed – see above, and Neil Hancox informs us of any changes ECT, for opinions and validation prior to implementation.	Without considering our needs we feel that many documents will go unused, not understood. Keep things clear and simple.
	Through Exco engagement also Online Duty Manager	How it is communicated is the key. Clarity of communications as much is too detailed and simply not understood.
	These documents are readily available online, and also at the information portals. No-one has briefed me, it's a sort of help yourself system. I also believe that these documents were supplied to all within the welcome pack.	No – No briefing received.
		Yes but no one briefs me. Do read policies but.

Workforce Feedback – Safety stand downs

Q. Are you and members of your team involved in the safety stand downs? If so, how? Are they effective?	Top Answer	Bottom 4 Answers
	Yes, we stop works and bring teams out for stand downs, nightshift starts later so we can capture everyone. One issue that came up at last session was awareness of Occ nurse. Not enough people using the resource. Need better signage for the nurse facility.	(Site Mgr) No but would attend. Normally attended by the safety team/directors.
		Kilnbridge have done a ton but people need to be 'tuned' in. Too many teams have those who do not contribute and are a risk. We should not have to deal with poor quality staff who are a big risk.
		Yes, stand down events do happen, sometimes not coordinated well with a concrete pour for instance. Not always useful, mandatory messages are not always good.

EXCO Feedback - Safety stand downs

Q. In your opinion do the workforce see value and worth in adopting the safety stand downs?	Top 5 Answers	Bottom 5 Answers
	Yes – level of questions raised was fantastic – very engaged audience	Planned, effective – need to be part of the message/communicate the plan. Must be clear with 5 Major Risks – link it to sites, make relevant the message to individual groups but involve everyone. In my opinion some were ok but majority not so.
	When I have been in attendance, I believe that the workforce do embrace the stand downs. I believe that they understand that it is there for their benefit.	Not at all consulted on the content of safety stand downs and it would be beneficial.
	They can be very effective in getting people involved but generally I support.	Some – but must connect with everyone.
	I believe so. I believe that the programme brings many benefits such as given the worker a voice.	When asked 'Yes' but not 100% confident they appreciate it
	Yes, recognise the importance of standdown. Especially motivational speakers.	Find out at last minute. Would like to be involved more – safety team avoid the challenge to debate what the subject matter is effective. Must be relevant.

Middle Management Feedback - Safety Stand Downs

Q. Do you see value in safety stand-downs?	Top 5 Answers	Bottom 5 Answers
	Yes I do – working 24/7 having a stand down – live music, presentations etc – lets the ops feel the project cares.	No value seen at present and a 'tick box' exercise. Should be used to give proper meaning perhaps such as 'lessons learnt'. To be effective they must be relevant to site.
	Yes 100%. Use of different mediums to present stand down issues (actors/ mocktails). Very good opportunity to build relationships with senior members of the JV.	I look for audience attention and participation. We must consult teams on what the content should be. We must think what is relevant to each individual. Make small groups not large audiences.
	Yes, it's where we gain knowledge and get to see examples of improvements.	Could be improved by making more relevant to site by using own staff to give examples. Use fresh set of eyes on site to pick up issues but report confidentially to the Site Manager.
	Yes, H&S culture is strong. Will trial a 'Safety Stand up'	On some yes, just not sure what we are trying to achieve sometimes A more focused approach would be much better. Different work, different skills.
	100% - great in getting the message across to many. But the scale of the events takes a lot of planning due to the size of the project and logistics are an issue. Perhaps 2 major stand downs would be enough with more targeted sectional stand downs. Family event was great.	Slides too technical for the work force. Ticking a box, not getting message through perhaps.

SAFETY STAND DOWN

Confused with Daily Briefings?

Q. How often do Directors and Senior Managers carry out unplanned visits to the front-line workforce, exhibiting visible felt leadership?	Top 4 Answers	Bottom 2 Answers
	Weekly H&S Inspections, I would do with Works Managers or Project Manager. Physical checks, Works Managers check haul roads each day.	Not that regular! Must be regular once a week and believed in. Is one safety advisor enough to cover the areas given? Good news that EXCO have started shift towards to engagement, but momentum must be kept and themes at intervention given from data collected.
	Gotten a lot better.	Once a month – pre-planned, very structured. To be honest – don’t go out enough.
	Yes – quite a lot. Often and more so because of SLAM. I have to mediate and resolve with a solution. Perhaps when we stop the team need to see the urgency of resolution.	
Q. What levels of concerns are reported to Directors and Senior Managers?	I encourage my commercial team to raise any issues through our team meetings, I am trying to get them to visit site more to maintain a connection with reality – part of their development. This conversation today has prompted me to do more in this space – important that the commercial team understand what is happening on the project.	

Workforce Feedback – Having a voice

Q. Is there anything in place that allows you to challenge on matters of concern?	Top 5 Answers	Bottom 5 Answers
	Plenty of routes to challenge – team will all listen to me, get backed up	Sometimes but could improve – need to be heard seriously.
	Black hat, foreman, production meetings able to challenge issues. Raise issues through Steve Meecham & Package Manager. Very receptive to challenge & ideas.	Communication with multi-cultural teams is an issue Need to force a change
	Can challenge every day and without question. As a leader I encourage this throughout the team.	Yes – however getting them to speak up is another challenge
	Feel comfortable speaking to anyone and it is now better than ever.	Voice is encouraged but must improve attendees at it.
	Yes, very definitely.	Not much to go wrong now

Middle Management Feedback - Consultation

Q. What are the existing methods of reporting concerns to senior management and how are these concerns dealt with?	Top 5 Answers	Bottom Answer
	AIM High and think this is reported up chain. Definitely issues are dealt with.	After raised we rarely have feedback.
	I am not aware of anything formal in place to report concerns to senior management but I feel empowered to make a phone call or knock on a door if serious enough but there hasn’t been a need so far.	
	AIM High with a response back	
	Email or call. Not aware of process but open communication.	
	Face to Face – it’s always the best method, as nothing gets misinterpreted, We also attend meetings (on line) and we are also encouraged to speak up. Stand-down days are an ideal time to raise concerns, especially for men. However, we do encourage our teams to speak up and challenge at all times, especially when concerned.	

Workforce Feedback – Senior Managers relationships

Q. How often do senior management communicate with members of the workforce and especially the front line?	Top 4 Answers	Bottom 4 Answers
	One of the first sites I’ve been to where safety is drummed in from the top	Do they believe that safety is the highest priority by certain actions.
	Walk arounds EXCO walks – various management are often here. Visual walkarounds – good engagement with workforce Daniel / Dean Graham / Jim Hughes always visible.	Yes, they do but could do better. Can’t really feel it, by speaking to the workforce.
	Some management now go out every Wednesday and this means a lot to the boys. The boys feel they are part of something.	More of a tour and report, conversations in the group, not so much interaction with the guys.
	Lead by example but have all open relationships so teams can talk to leaders comfortably.	Monthly EXCO visit takes place go out and engage with the blokes. They started out as engagement tours then changed into safety visits. Think we need to do more engagement that is more than just safety. Feels like some walkarounds are just a box ticking exercise sometimes.

CONSULTATION&
ENGAGEMENT

<i>Q. Do you believe that the front-line workforce fully understands the SLAM programme and if so, what are the levels of engagement?</i>	Top 5 Answers	Bottom 5 Answers
	My Team – YES. Example, on Wednesday I witnessed a worker stop production due to a safety concern. The issue was reported and rectified and only then did people return to work	Workforce understand it and the process but the environment to use is not encouraged.
	Black hats have done a good job to make everyone aware.	Not at all – negative response. It’s a good idea but difficult to implement.
	Focus has moved away from Team Charter and focus on SLAM. Yes they understand SLAM.	Mark did an EXCO tour yesterday and questioned 15 of the workforce at a shaft if they knew what SLAM was – only 20% positive responses – the site black hat had briefed them all that morning and SLAM had been part of that. Highlighted the need for SLAM posters to be in Romanian and polish in the precast factory – QR translation app being developed.
	They understand the programme and they understand that they are empowered to stop and prevent an accident or injury and also quality. If it’s not right we stop.	Yes 70% confident 15% might be punished and 15% don’t understand. The aim is that subcons can stop other works on site.
	100% - used it a few times	Not all of them. When surveys some workforce don’t know about SLAM but have been briefed about it.

Middle Management Feedback - Behavioural Culture - SLAM Stop, Look, Assess, Manage

<i>Q. Do you believe that the front-line workforce fully understands the SLAM programme and if so, what are the levels of engagement?</i>	Top 5 Answers	Bottom 5 Answers
	My Team – YES. Example, on Wednesday I witnessed a worker stop production due to a safety concern. The issue was reported and rectified and only then did people return to work	Workforce understand it and the process but the environment to use is not encouraged.
	Black hats have done a good job to make everyone aware.	Not at all – negative response. It’s a good idea but difficult to implement.
	Focus has moved away from Team Charter and focus on SLAM. Yes they understand SLAM.	Mark did an EXCO tour yesterday and questioned 15 of the workforce at a shaft if they knew what SLAM was – only 20% positive responses – the site black hat had briefed them all that morning and SLAM had been part of that. Highlighted the need for SLAM posters to be in Romanian and polish in the precast factory – QR translation app being developed.
	They understand the programme and they understand that they are empowered to stop and prevent an accident or injury and also quality. If it’s not right we stop.	Yes 70% confident 15% might be punished and 15% don’t understand. The aim is that subcons can stop other works on site.
	100% - used it a few times	Not all of them. When surveys some workforce don’t know about SLAM but have been briefed about it.

SLAM

<i>Q. What can you tell me about the programme?</i>	Top 4 Answers	Bottom 4 Answers
	It’s simple and basic but effective to stop work and make improvements before re-starting. We often pause activities to make improvements, but not always classed as a SLAM .	Need to be better at SLAM. Guys on launching girder are French and Spanish. Their focus is just on delivery, it’s not in their culture to stop work and improve things.
	You’ve got the right to stop any work you think is unsafe – everyone signs up to the poster.	Like SLAM but people need to feel confident to use. Must be used as a benefit but not as a punishment.
	SLAM. Implemented it twice in the factory . Worked well Put a couple of POWRA’s in place to fix issues. Re-briefed the teams – very effective.	Things are getting better – but we have no discernible programme. SLAM should be used without fear, but we must encourage it. It takes courage to STOP, and we must give people the confidence often and regularly. We must celebrate it can be done.
	Support the SLAM and everyone buys in.	SLAM is a great gift to the teams. We must sell the confidence to ‘STOP’ to the teams as at the moment it is just words.

EXCO Feedback - Behavioural Culture - SLAM Stop, Look, Assess, Manage

<i>Q. What do you believe are the main benefits of the SLAM programme?</i>	Top Answer	Bottom 5 Answers
	Derek gets it, SLAM – posters on site – left to safety , but with adequate sponsorship.	We have talked a lot in exco about it – not aware of any correlation between stopping work and incidents. I think we have a massive issue with expecting guys to actually stop work and be supported for doing so. It’s easy for management to say stop, difficult for tier 2 / 3 and the workforce
		I love working with the French, very delivery focussed but where is the line – do they get SLAM for instance.
		Induction in 6 languages – in tablet 6 key messages will be translated – QR code will be made available.
		Visual messages, some use interpreters – follow on briefings. Get the message initiatives but keep message simple – QR codes for posters.
<i>Q. MANAGE - How do we communicate with non-English speakers?</i>		Black hats in conjunction with interpreters - Use much more visual messaging - Consult with interpreters on effective messaging - Consult with teams on what would work for them.

Workforce Feedback – Balance between schedule and safety

Q. In your opinion, put in order, highest first, where the greatest amount of influence is applied by management: ❖ Quality ❖ Safety ❖ Production	Top 5 Answers	Bottom 4 Answers
	We are constantly told ‘if it’s not safe, stop’ – I believe it. Safety is # 1 for Align, production and quality go hand in hand. We are very responsive to issues as they are raised. Safety, Safety, Safety.	1) Production first 2) Quality – no emphasis 3) Safety last!
	Safety - first Quality – reducing accidents. Productions	Definitely pushing the right culture, however in reality production is slightly ahead of safety and quality Power failure last week – focus was on production and lost work rather than everyone being safe.
	Safety, Quality , Production. All the time – safety – rams COSHH etc.	Quality and production over safety – just a tad over. Reaching milestones safety drops back a little bit
	Since we had the fire, safety is at the top along with the programme. Didier and Daniel want to see what’s wrong with safety but want to make sure it is being fixed	1. Production 2. Quality 3. Safety
	Since Christmas safety definitely priority, quality and programme sitting second.	

Middle Management Feedback - Balance between schedule and safety

Q. In your opinion, put in order, highest first, where the greatest amount of influence is applied by senior management: ➢ Quality ➢ Safety ➢ Production	Top 4 Answers	Bottom 5 Answers
	100% it’s safety – lead from the front – safety first is the whole culture on surface works Production then quality.	1) Production 2) Quality and Safety given LOW priority
	Safety, Quality & production	Production – first Safety - second Quality – third
	Balance is achieved by safety, quality and production. Produce programme to reflect the above. This way the outcome is much better of the team.	1. Production 2. Safety 3. Quality
		Production safety and quality are all pretty close, some think production is still first personally safety has to be first. We have tunnellers from France, Spain and Nepal and the way it’s done elsewhere can be difficult to change.
	On viaduct do not seem to put productivity first in my opinion. 1) Safety 2) Production 3) Quality	More technical roles will focus on production.

“PRODUCTIVELY SAFE”

EXCO Feedback - Balance between schedule and safety

Q. Are there any methods of incentivising the workforce?	Top 3 Answers	Bottom 5 Answers
	Yes, there are some bonus schemes in place – productivity bonus for the tunnel teams offset against HSQ performance	Is any of senior managers bonus linked to HSW? Should it be S&Q related – accident in viaduct factory lifting – smashed fingers, slipped – no bonus – conversation was still about production in EXCO.
	Yes – aim high awards for observation platform. Publicise achievement – BAFTA award teams/ individuals which needs momentum. Consult with teams on hot it is managed/ awarded.	At times, too much focus on programme. A lot of pressure from JV board – my team often on the receiving end.
	Bonus that get paid to tunnels, segment factory and precast factory. Craft bonus schemes on other for consistency – viaduct very effective and beginning to grasp the nettle.	No budget for Behavioural Safety.
		Do we measure what this incentive means to everyone’s behaviour and needs to link part to improved safety performance.
		Something for me to take away is how do tier 2/ 3 incentives work and whether it drives the right behaviour.

Q. As a Director/Senior Manager what level of involvement do you have regarding health and safety?	Top 5 Answers	Bottom 4 Answers	
	We all have a part to play and whilst I am sometimes detached from the operations, I believe that we all have a responsibility towards health and safety. Also, I am fully aware of safe working practices and will challenge on matters of concern	We are very productivity driven. Tend to promote people that are capable but not always the best communicators. As senior leaders we don't always have the skills.	
	1. Being more visible to the workforce 2. To communicate on a face-to-face basis with members of the workforce 3. To assist in answering questions at the front-line	1. In briefings do we have faith that messages are understood, feedback given. 2. Toolbox talks to encourage, lessons learnt and not for sake of. 3. Safety leadership is off the mark – reactive and not owned. 4. SHEQ team 'hands off' but need to lead, inspire and change attitudes. 5. SHEQ very poor and must improve.	-
	Starts at the top Leadership and Visibility Make sure the basics are in place Stick to the rules & police those rules It's great on this project as we have all of the data available on Dalux – RAMS/I&TPs/Quality records – it's fantastic.	To collect/info –not being done! - Pandering to reactive requests - Question supervision - quality, quantity and are they employed correctly - 24-hour operation but not seen as such and negative impact on safety management. - Pandering to reactive requests - Question supervision — - Communications - poor communication/poor planning. - No understanding of roles SHEQ team. - Where is the value?	- leadership of SHEQ not effective. - Engagement/Value - not at all focussed. - Change needed - essential to challenge. - Black hats not attending SHWELT. - No example setting - get back to basics. - No enforcement of rules - no lessons learnt.
		I believe that the EXCO and other Directors genuinely want a safe place to work. However, their intentions are honourable but they are not there to directly manage it. They are there to ensure that everyone knows and understands the expectations of the project and its culture.	In last couple of years it's felt like a fight to be listened to, if I've felt like that then those further down the chain must really struggle.
		Leadership role – set examples and get team to follow this philosophy.	

Q. How involved are you and other members of your team in creating a safe place to work?	Top 5 Answers	Bottom 5 Answers
	Pivotal and I take it as the most important thing going.	Language barriers need to be broken down. We have talked about bringing in a British supervisor to manage the CVV teams and help raise the standards. Spanish and French teams struggle with briefing in English, not sure they see the value.
	Feel comfortable in raising matters and we have the powers to talk. Instinctive way of doing things – leaders always reinforce how do we do the job safely.	My direct workforce, foremen and labourers are a mix of nationalities, mainly eastern European.... deal with issues locally. Lots of complaints regards quality of food etc. – need to get beyond this to the real issues. Kilnbridge supervisors have struggle in dealing with some of the attitudes.
	Creation of our own RAMS – my teams involved in creating, we also oversee RAMS produced by Kilnbridge / VSL / Sian formwork	Black hats need support and training – communication, persuasion, influence Lots of turnover.
	Very and constant. Can be challenging but never stops us trying. Team pitch in well and support each other.	Not really encouraged. Black hats have to take it as the most important 'self- driven'. Safety is and does matter. Proper planning avoids the accident.
	Start of work briefings every day. Both shifts covered. Good handovers	Difficult keeping guys engaged due to repetitive nature of tasks. Daily briefs don't differ much from previous day

SUPERVISION & LANGUAGES

Q. How do you and members of your team feel about the management's view on safety?	Top 5 Answers	Bottom 5 Answers
	Very high consideration of safety, increased over last 6 months and certainly since Christmas	Standing at the pulpit preaching but not at the races when it comes to reality. We have to change/ react to incidents – should have a consequence for leadership.
	Good, it's good to see senior management on tours now	I do believe the project have safety have as a first priority. My guys feel like our safety issues are not being addressed Which is not so, they are empowered.
Q. Do you believe that more could be done?	We are now looking at measures to be proactive – too much at risk. We are so good at this. Really proud of our job – nobody been injured in our section.	Miles behind the curve on having the launching girder being fully 'safe to operate' to UK standards re: safe access / egress. Good interventions being put in place not just. Production definitely an issue in over riding safety in the launch girder being ready for use before it was put into use. Planning and interface of works here is poor. I'm now planning electrical works 3 weeks out. Permit/ SSOW planning would benefit from more rigorous control. Our work here is quite reactive but my 3 week lookahead is starting to pay dividends.
	Continually improving but never shy of comment. Need to control knee-jerk reactions to events.	Biggest concern here is poorly trained individual re: lifting competence experience, feels like desperation to just get enough resource in. Not just in the factory, but across the programme. Really difficult to get to that last 10% of change, behaviour is our challenge. Red/ Yellow card systems could be a good consequence to driving the right behaviours.
	Pro-active and re-active improvements, not just after an event.	VSL supervision needs to be improved – need to get greater engagement and compliance from the gangs. Got to make sure the comms suits all nationalities (French /Spanish/ Lebanese / Punjabi...). comms needs to be tailored and teams briefed in mother tongue. Need consequence attached to poor behaviour VSL – don't see the consistency in approach, need to get their black hats into a better space. Their work is high risk so needs to be well managed. Think an Align supervisor with them full time would be beneficial.

SAFETY OVERALL

EXCO Feedback - Safety Overall

<i>Q. Proactive/ Reactive.</i> <i>Do you believe that safety improvements are only carried out after an incident and are you involved in those improvements?</i>	Top 3 Answers	Bottom 4 Answers
	Pro-active throughout, lots of focus, more planning needed, more could be prepared.	Not only but largely – Align safety team hands off approach to change urgently. The current result is that many supply chain partners are running Align not the other way around.
	Do not agree with that. We look closely after incidents to learn how to do it better. Bringing up to standard. TBM excellent work on what/control.	We are very responsive after an event, when we have a HIPO, very good at process of investigating – how do we deal with headspace of workforce.
<i>Advice: As a Director/Senior Manager, what improvements would you like to see implemented and what benefits could they bring?</i>	Needs to be more of what we are now doing, focus on our key risks. Derek 1 year in the role, got his head around the job. Invested a lot of time and energy to get the right roles and responsibilities in place. All the right works managers in place, first time on the job it's been properly joined up. Consistency is now more obvious. Best job I've been on. Daniel a great leader, very inclusive	Clearly understaffed on shafts! Senior leaders to do more to regularly connect and release middle managers to become more active – a breakfast club will not just do. Clear accountability with engineers/black hats. Clear ownership of areas they will be responsible for. Have the discussion to regularly review what key risks are and take ownership. Take people with us – communicate at all levels – make active and relevant to all.
		More engagement with teams from safety team to work closely together – rather disconnected at moment. Immediate defence and we must cooperate. Listen to what the crowd says.

Important from feel of message and can be missing. Need to understand the danger of safety on individuals and the leadership. Senior managers to help team leaders gain		

Middle Management Feedback - Safety – Overall

Q. How do you feel about the senior management's view on safety?	Top 5 Answers	Bottom 5 Answers
	Senior managers keen to improve safety and take it seriously.	Important from feel of message and can be confusing. Need to understand the danger of poor safety on individuals and the leadership. Senior managers to help team leaders gain confidence of carrying the message. Make sure you communicate the key risks in everyone's language.
	Giving quite clear message and no limit on what needs to be done to raise level of safety.	Not really engaged and paying a lip service to subject. Worried about HSPIs and reflection rather than people actually getting hurt.
	High standard, message clear – stop when unsafe.	Sometimes “load the gun” and let the black hats deliver the message – they land initiatives in the laps of the black hats and it’s “over to you guys”
Q. Are safety improvements only carried out after an incident and are you involved in those improvements	We are quite pro-active including reacting to lessons from events that have happened elsewhere	Only reactive and teams not involved in process.
	No – try to be proactive, near misses and share lessons learnt. Always aim to be talking safety with others.	We are more reactive than proactive

Workforce Feedback – Behavioural Culture

Q. What can you tell me about the programme?	Top 4 Answers	Bottom 4 Answers
	It's simple and basic but effective to stop work and make improvements before re-starting. We often pause activities to make improvements, but not always classed as a SLAM.	Need to be better at SLAM. Guys on launching girder are French and Spanish. Their focus is just on delivery, it's not in their culture to stop work and improve things.
	You've got the right to stop any work you think is unsafe – everyone signs up to the poster.	Like SLAM but people need to feel confident to use. Must be used as a benefit but not as a punishment.
	SLAM. Implemented it twice in the factory. Worked well Put a couple of POWRA's in place to fix issues. Re-briefed the teams – very effective.	Things are getting better – but we have no discernible programme. SLAM should be used without fear, but we must encourage it. It takes courage to STOP, and we must give people the confidence often and regularly. We must celebrate it can be done.
	Support the SLAM and everyone buys in.	SLAM is a great gift to the teams. We must sell the confidence to 'STOP' to the teams as at the moment it is just words.

Middle Management Feedback - Culture

Q. Do you believe that the front-line workers know that they have a voice and if so, how do you encourage these individuals to speak up and challenge?	Top 5 Answers	Bottom 4 Answers
	100% I encourage all the teams to speak up and bring any issues forward. Whether that be a process/ procedure/ behaviour.	Little voice/engagement encouraged or supported. Culture of fear from leadership evident with 'not to speak up' the norm. View is that if you SLAM you will be penalised as an individual.
	I do. I also believe that they do use that voice.	Yes and no – we preach – but reluctant to come forward because there is a perception that there may be repercussions – encouraged but not forthcoming. Workers have a voice but don't use it – industry wide issue – stigma attached – big boss won't be happy if we don't hit targets.
	Encouraged to speak up and they have many ways to do it.	Not enough – they feel too safe due to all the safety measures we put in place – make working at height feel safe for them when it's not. Need to find a way to explain that even if they have protection, it doesn't mean they're safe.
	100%. They do speak and will challenge.	Doubt smaller sub-Contractors speak up.
	100% yes. I have also witnessed the workforce stop the work-0 and clear the area when he had a concern.	

EXCO Feedback - Embracing and supporting the Behavioural Programme

Q. Are members of the board involved in reviewing the effectiveness of risk controls within the project?	Top 3 Answers	Bottom 3 Answers
Q. In your opinion, what benefits can be achieved by having a robust and proactive behavioural programme.	Everything I do in my area. Spend a lot of time planning and programming. I then present my strategy & plan to senior team, risks are part of that... sometimes to the JV board, depending on risk.	Not visibly – do they (anybody!) understand that SLAM/ Major Risks etc is part of a BBS programme?
		Not as much as we should and we don't do it in much detail. Personal project responsibility is given the key motivation to intervene. External risks are reviewed by audit to ensure we are doing what we said.
	Massive benefits would be gained. The key to turning attitude is by changing/ modifying behaviours. This will then get the complete picture of moving to a fully motivated culture.	Need to reset and push a Behavioural journey with a clear and simple plan that everyone understands. It is a must do! – good attitude beats everything. Attitude can only be nurtured and coached. BBS essential – must not see SHEQ as policing as this does NOT work. The journey seems not to have begun or is not at all understood.
	Important to get and maintain engagement with all levels across the programme, however, needs to be simple to implement.	

SAFETY CULTURE

WEEKEND WORKING

Workforce Feedback – Weekend working

Q. Do you and your team believe that safety standards are being maintained and are planned and supervised correctly during weekend work?	Top 3 Answers	Bottom 3 Answers
	At times that is a perception but personally I put more effort to make sure that the team understand that Saturday planned work is the same as Monday. It is a professional attitude to safety every single day I am at work.	Not at all prepared and no surprise things happen at weekend. Reaction from leadership was not impressive. Compromised by attitude (different one) for weekend work.
	Even though I don't work weekends, my guys often do, we make sure all usual briefings are in place – sign off of weekend working, full supervision in.	You know as well as I that certain things get done on a weekend that don't get done during the week. Safety 10/10 during the week 8/10 at the weekend. No safety staff in at weekends which isn't right. Example – no ladders even small steps, are we being realistic.
	I don't let standards drop – but have seen people take shortcuts sometimes – not using walkways. But for us – same as a weekday – no job and knock. We are good at keeping same standard	Yes and no – but silly things like gloves and glasses and earplugs use falls away. Works planned well. Never had any issues with activities on Saturday.

EXCO Feedback - Weekend working

Q. During the periods of weekend working, do you believe that safety standards are being maintained and that the works are adequately supervised during this period?	Top 2 Answers	Bottom 5 Answers
	Yes	No and No – Tarmac incident demonstrated this
	Probably were not but a change has been put in place. Example of reactive response	No!! However I am pushing a change to have adequate cover and log weekend works by Wednesdays – senior black hat signs off for supervision, tasks, documentation – new process now in place. Needs some consistency and a health check on effectiveness.

Middle Management Feedback - Weekend working

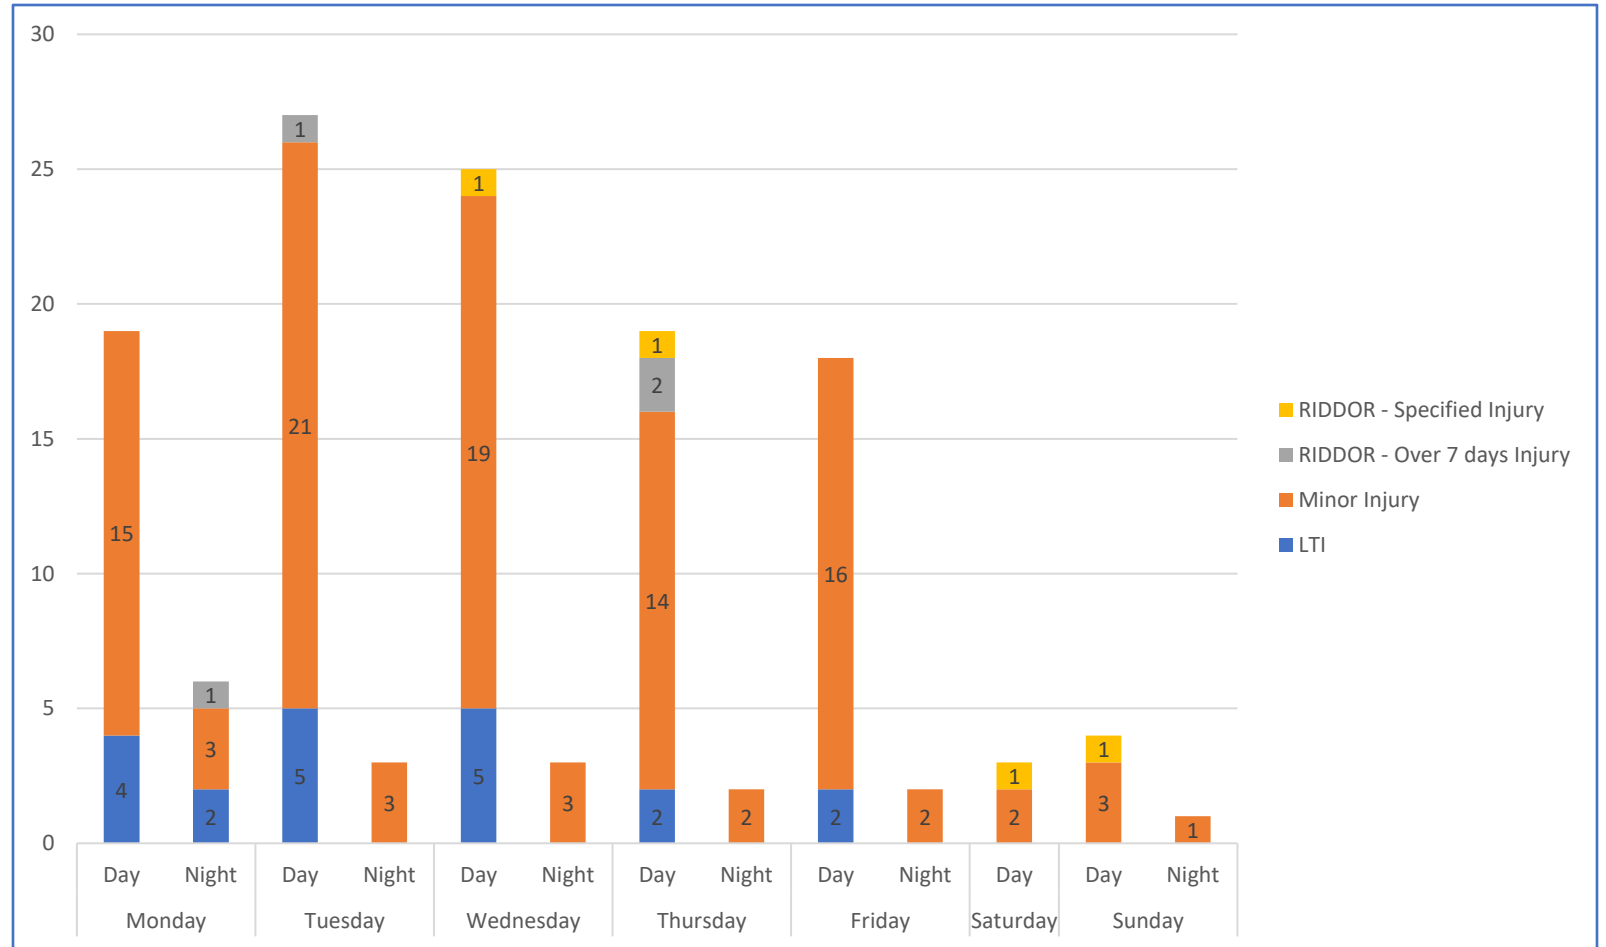

Q. During weekend working, do you believe that safety standards are being maintained and that the works are adequately supervised during this period?	Top 5 Answers	Bottom 5 Answers
	Saturday is seen just as a Monday. Any maintenance is included – just as important at weekend.	I know that weekend works do not maintain safety standards and there is less supervisory staff.
	Yes, I am confident that this is done. I challenge everyone that they can call me if in doubt. Teamwork is key to make Saturday is the same as Monday.	It is a risk that needs to be looked into. Mostly maintenance issues and do we give the same importance to this.
	Yes, don't know about other works outside of TM	I don't work at weekends, but I think there are different safety standards, I know it happens – in the tunnel, yes. There is less Supervision and Black Hat attendance at weekends. This may also happen at nights too but there is less 'free styling'.
	Saturday working is not mandatory, generally maintenance activities. We always have our foremen in, so fairly confident that standards are maintained. All weekend work now must be registered and approved to ensure adequate supervision is in place.	Many incidents are/have been happening on weekends/nights. Should Align have more supervision with safety understanding, available to lead.
	Yes, they are now.	At times some work is without Align supervision. Perhaps consider night shift safety role with competent staff. Could link to improved skills of Black Hats.

	NO! Productivity rated increased. Not enough people around to supervise but the behaviour needs attention as the mindset might be seen as urgent/ focussed as it might.
	Behaviour at weekends can be different to the week. Generally, it is planned/ supervised well – but at a lower level but less work. On the reverse side of the coin – no meetings etc. give a positive time element not given in the week. Sub-contractors' supervision is at a reasonable level.
	Not clear – weekend/nights and major incidents are occurring out of hours – question is why do we get more done in these hours.

WEEKEND WORKING

12 MONTH WEEKEND WORKING INITIAL ANALYSIS

- In general terms we have 2500 (100%) personnel working Monday to Friday
- 1200 (50%) personnel regularly work on Saturday
- 550 (25%) regularly work on Sunday
- In terms of “Weekend” incidents:
 - 6% of incidents occur at weekends
 - 25% of RIDDOR incidents occur at weekends

Middle Management Feedback - Roles, responsibilities and accountabilities

Q. On your project, who manages safety?	Top 5 Answers	Bottom 5 Answers
	Everybody, team working with BHs.	Kevin Long - H&S Manager
	It is everyone’s role to manage safety on the project.	Me & Carlotta
	Everyone is responsible for managing safety. I believe this.	What we tell people is that its everyone ... I think black hat level up – they get it. Not sure the workforce always get it or believe it
	Everyone responsible – leadership encourage – black hat/foreman key part on site.	Individuals from teams, safety team has only a few that deliver results.
	All of us. However, the everyday management such as documentation like the H&S Policy is produced and managed by the H&S Team.	Myself, with the help of the Blackhats – we own it. I know I'm a foreigner here and always ask for opinion on UK process.

EXCO Feedback - Leadership

Q. As a Director/Senior Manager what level of involvement do you have regarding health and safety?	Top 5 Answers	Bottom 4 Answers
	I believe that the EXCO and other Directors genuinely want a safe place to work. However, their intentions are honourable but they are not there to directly manage it. They are there to ensure that everyone knows and understands the expectations of the project and its culture. Leadership role – set examples and get team to follow this philosophy.	In last couple of years it’s felt like a fight to be listened to, if I’ve felt like that then those further down the chain must really struggle.

ROLES AND RESPONSIBILITIES

EXCO Feedback - Leadership

Q. As a Director/Senior Manager what level of involvement do you have regarding health and safety?	Top 5 Answers	Bottom 4 Answers
	We all have a part to play and whilst I am sometimes detached from the operations, I believe that we all have a responsibility towards health and safety. Also, I am fully aware of safe working practices and will challenge on matters of concern 1. Being more visible to the workforce 2. To communicate on a face-to-face basis with members of the workforce 3. To assist in answering questions at the front-line	We are very productivity driven. Tend to promote people that are capable but not always the best communicators. As senior leaders we don’t always have the skills. 1. In briefings do we have faith that messages are understood, feedback given. 2. Toolbox talks to encourage, lessons learnt and not for sake of. 3. Safety leadership is off the mark – reactive and not owned. 4. SHEQ team ‘hands off’ but need to lead, inspire and change attitudes. 5. SHEQ very poor and must improve.
	Starts at the top Leadership and Visibility Make sure the basics are in place Stick to the rules & police those rules It’s great on this project as we have all of the data available on Dalux – RAMS/I&TPs/Quality records – it’s fantastic.	To collect/info –not being done! - Pandering to reactive requests - Question supervision - quality, quantity and are they employed correctly - 24-hour operation but not seen as such and negative impact on safety management. - Pandering to reactive requests - Question supervision — - Communications - poor communication/poor planning. - No understanding of roles SHEQ team. - Where is the value? - leadership of SHEQ not effective. - Engagement/Value - not at all focussed. - Change needed - essential to challenge. - Black hats not attending SHWELT. - No example setting - get back to basics. - No enforcement of rules - no lessons learnt.

Middle Management Feedback - Safety initiatives

Q. In your opinion, please describe the level of effectiveness and what improvements, if any, could be made.	Top 4 Answers	Bottom 5 Answers
	Fairly high standard. Doesn't think could add more.	Too complicated – make messages simple. Behaviour change is key - Keep things simple.
	It's great. It's our job to encourage the workforce to embrace and see the value in it.	Could be briefed more and better publicised. Take policy, distill it and make relevant to the site
	All safety is effective and good to have. Find a way to improve explanation of the initiatives to the operatives. Find a way to make SLAM much slicker, less time consuming as it loses its effectiveness if operatives stop job in error or for something that is fixed there and then but because it's a SLAM there needs to be an investigation of working methods	There are many initiatives, perhaps too many – would be better if simplified and focused on one for a period.
	They do work when managed well. They should be included in every briefing to sit as a reminder.	I don't think the project needs loads more initiatives. Work on the existing ones being clear and relevant that are refreshed and updated periodically. Could also have more information / data fed back on SLAM's = so we can learn and know what we need to do in the same event or even as normal working.
		Make safety initiatives relevant for our teams – focus on individual needs.

EXCO Feedback - Safety initiatives

Q. In your opinion, please describe the level of effectiveness and what improvements, if any, could be made.	Top 5 Answers	Bottom 5 Answers
	Evidenced that it is getting to the workforce. Try to get to early morning briefings. Like to see Black hats communicate to wider workforce.	Too many initiatives just imposed, not developed in house and relevant to us, not enough consultation therefore lack of buy in.
	They are effective but the measurement of the effect is hidden in AFR for example which can be skewed by major events. It clearly focus' the mind when an incident happens.	Far too many – conflicting messaging, competing and not focussed.
	Reasonably effective and need to be refreshed.	Snr Mgr doesn't always get his comms right, he can be a bit blunt which sets the tone. Others can be very approachable, leads by example.
	Aim High now working effectively.	Not absorbing – do the workforce get the messages. Need hard hitting messages but part of a proper plan with purpose and timeline. Keep it very simple – tailor language to engage groups to contribute. Plan to keep momentum that it is key that safety remains number one.
	EXCO engagement, toolbox talks, SLAM, Behavioural initiatives and psychological safety. Regular conversations around SLAM & Behavioural issues.	More for those where English may not be the first language. Greater communication by all members of the management structure

SAFETY INITIATIVES

13 Life saving cubes for 5 Major Risks

- A random **Major Risk** cube is selected and from the 13 **Life Saving Rules** cubes you must match each one and stack the Rules cubes on the Risk cubes could be a tower of two, three, or four!
- This is a self-selecting game working with others to get the answer correct.

Common Themes from INTERVIEWERS

The interviewers provided their feedback on how the interviews progressed and some key items / themes that they felt should be highlighted when taking the review forward. The three questions asked of the interviewers and the common themes from them are as follows:

Q1. What are the top 3 positives you would say about Align IPT / Align IPT Team that you gained from the interviews?

- ❖ Received a sense of proudness and enjoyment working for Align IPT. Most felt proud to be working on a project of such magnitude with high standards of facilities.
- ❖ A strong culture of challenge, willingness to speak up and do the right thing which would appear to exist particularly across the Black Hats.
- ❖ A genuine desire for safety first with all the ingredients existing to make the projects a centre of safety excellence and promote that 'Productively Safe' can be understood and become the way to do things.

Common Themes from INTERVIEWERS

Q2. What are the top 3 areas for improvement that Align IPT / Align IPT Team should look at from the interviews?

- ❖ Behaviours not fully supporting the safety-first culture. Although the desire is there, the majority of those interviewed felt as though in reality production still takes priority over safety on the projects. The general culture felt the priority is:
 - Production
 - Safety
 - Quality.
- ❖ Clarity & simplicity of messaging/behaviours/reporting. The 'AIM High' and 'SLAM' initiatives are key, but the larger proportion of workforce do not use or have minimal engagement with it for several reasons around:
 - Understanding
 - Language
 - Technology
 - Not seeing the positive change as a result of an AIM High observation.

Continue listening and making responsive changes/improvements to helpful suggestions to make Aim High improve its performance and make the data collected influential and relevant to the project.

- ❖ Financial incentive schemes seem to have been a repetitive concern with fears the current production-based incentives are a risk of driving the wrong safety culture and a desire for the incentives to be linked to not only production but safety and quality too.

Q3. If we were doing the review again, what top 3 improvements to the review process would you make?

- ❖ Feedback from the online survey was that it was not a '10 minute' survey as promoted and was complicated to complete.
- ❖ The question set for the interviews could have been shorter as it was repetitive in parts. Every interview lasted over 1.5 hours and could have gone on longer and was quite fatiguing, so could possibly miss key points at the end of the day.
- ❖ At the end of each interview give a section for the interviewer to identify themes within the responses.

Section Next Steps

3. NEXT STEPS

We would advise Align IPT to use the assessment results as a basis for action planning and implementing SMART objectives to improve the score within the applicable Risk area of the review.

Improvements that are needed should form part of the HSQES Plan.

We would recommend:

- Daniel Altier and Align IPT team decide and define an action plan based on the key risk areas
- Daniel Altier and Align IPT to produce improvement plans based on the recommendations identified. The improvement plans will be owned operationally by Daniel, Didier and Derek with support from the wider EXCO team.
- Daniel Altier and Align IPT to monitor the above plans and present progress through the EXCO management meetings.

Survey results can also be used as a benchmark for future assessments making this a suitable practice for evaluation of maturity, should the Align IPT elect to do so.

Once the action (improvement) plans have been drawn up, the group should agree on the resources (people, equipment, facilities) and costs that will be required for commitment to the actions.

Lessons Learnt

We would recommend Align IPT ensure that there are regular lessons learnt sessions incorporated into Align IPT meetings to discuss and improve on the process.

To ensure this activity is sustainable and that improvement can be measured and evaluated, we recommend that the review should be reassessed between 6 – 9 months of implementation to review improvements.

THE WORKFORCE

For Leadership in Safety and Wellbeing

I am responsible for my own safety and wellbeing and the safety and wellbeing of those around me.

I create the Health and Safety vision

- ✓ I actively participate in the preparation of operating procedures, and I share my experience

I maintain Safety and Wellbeing Focus

- ✓ Before starting my tasks, I make sure that I understand the methods and associated risks
- ✓ I do not perform a task that I consider dangerous and I am happy to step back and say no in the event of a risky situation
- ✓ I must follow the Align Life-Saving Rules and the 12 Basic Safety Values
- ✓ I must perform a SLAM* and IMPROVE when I become aware of an unforeseen situation

I influence and inspire others

- ✓ I should maintain my composure and have the capacity to step back and speak out
- ✓ I have confidence in my added value and my ability to contribute to solutions

AL||GN

Working in partnership with

HS2

I am credible and trustworthy

- ✓ I actively participate in RAMS, TBT and daily briefings by sharing with others my contributions to safety

I am a Team Player

- ✓ I intervene when someone is in danger and I start a SLAM* and IMPROVE
- ✓ I participate in safety conversations and safety visits organised for my work areas

I communicate effectively

- ✓ I do not hesitate to ask questions of my supervisor to better understand my tasks
- ✓ I listen and accept constructive criticism and positive feedback
- ✓ In case of an unforeseen or unexpected event, I intervene, raise a SLAM*, stop the works, make the area safe and start to IMPROVE

I influence and inspire others

- ✓ I report any safety issues / problems, challenges and risky or unsafe situations via SLAM* immediately to supervision and then record via the Aim High platform
- ✓ I am happy to discuss my SLAM* interventions and Aim High observations during daily briefings that I participate in

OUR VISION: ZERO SERIOUS AND FATAL ACCIDENTS

*Duty To Stop and Manage Unexpected Situations.

SLAM: Stop Look Assess Manage

IMPROVE: Identify, Manage / Protect, Raise, Organise, Validate, Engage

AIM7312	AimHigh	Closed	There is no Marshall on the bridge during this night shift		12 April 2023		
AIM7290	AimHigh	Closed	Driver- Joe Ellis Company- TG Tunnelling Vehicle Reg- Y18JHE Date& Time- 11.04.23, 07:19 AM		11 April 2023		
We have observed that the above-mentioned Driver drove past us Security at the main gate very dangerously and over speed. He drove out from the wrong lane overtaking a car in front of him and the water barrier at the main gate while exiting the site, he drove out from the oncoming lane. I feel it was very unsafe for us security present at the gate because we were focusing on oncoming traffic
