DALUX SLAM & IMPROVE

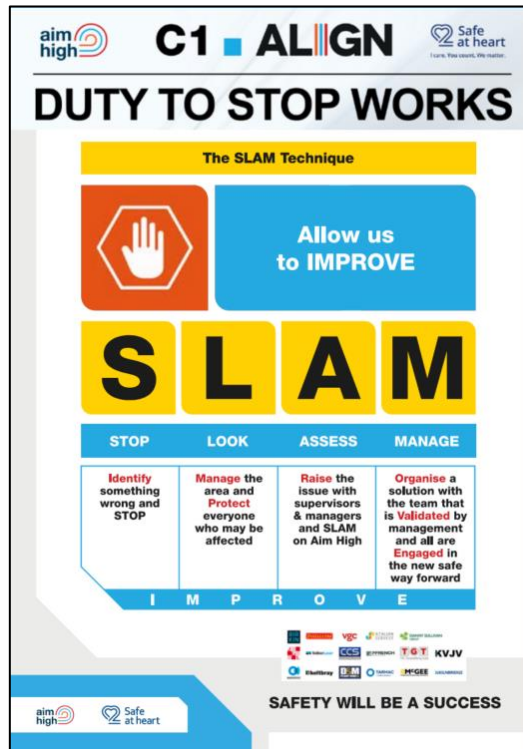

Document Title: SLAM&IMPROVE Process
Document Number: 1MC05-ALJ-HS-PRO-C001-000038
Revision:C02

C1 ■ ALIGN aim high

Executive Summary

Document explains the difference between various levels on observation reporting:

- **DALUX Observation:** Issue and action raised from routine HSEQ / site visit / Inspection. This will not be a non-conformance that leads to suspension of works.
- **AIM HIGH Observation:** Workforce observation made through AIM HIGH Platform
 - Dealt with by local management with response on the AIM HIGH Platform
 - **Does not lead to a stoppage of work activity**
- **SLAM** button on AIM HIGH gives an alternative means of recording change but should always be escalated verbally to supervisor / line management. **SLAM BUTTON SHOULD ONLY USED WHEN WORK OR ACTIVITY HAS BEEN STOPPED FOR CORRECTIVE ACTION**
- **SLAM & IMPROVE** is a situation leading to stopped activity / suspension of activity.
 - **All levels of SLAM & IMPROVE will need to be recorded on DALUX and validated by supervision or management.**
- Identification of situation **requiring work to be suspended raised verbally or on the AIM High Platform**
 - **Level 3: Simple SLAM** can be dealt with locally by local supervision or management and recorded on DALUX as closed.
 - **Level 2:** Suspension of **works leading to intervention and validation by management** via the DALUX IMPROVE Process
 - **Level 1:** Suspension of works **due to HIPO situation requiring senior management intervention** and corrective action at management or subject matter expert intervention. **IMPROVE process to be followed and recorded on the DALUX system by management team**

SLAM & IMPROVE Scope & Purpose

The purpose of monitoring and recording of **SLAM & IMPROVE*** on Dalux is for Align to have a centralised and formal system where we can capture proactive data with the scope of analysing the information, learn from it and share the findings across other Align packages to prevent repetition of events. This is also a (HSPI) Client requirement Health & Safety Performance Indicator.

SLAM was introduced with the aim of by giving all personnel the confidence to achieve our “Duty to Stop Work” when they see, feel something is wrong or changes arise to stop and take the appropriate steps to prevent incidents occurring. The Workforce can do so by raising their concerns “ SLAM” on Aim High Observation platform after informing their Supervisor.

The introduction of IMPROVE within the process is to put a duty on the leadership and local management team to, not just stop an unforeseen or unsafe event/situation but to take the necessary steps to improve and prevent recurrence by managing the “Change”.

Part of the Validation process within IMPROVE is engaging the Package Manager and other Support team (Subject Matter Experts) members in the process to prevent the creation of further risks by ensuring that the proposed corrective and preventive actions by site team and black hat prior for the works to restart and making sure all people involved are aware of the situation and solution decided.

***Stop: Look: Assess: Manage**

Intervene: Manage: Protect: Raise: Organise: Validate: Engage

Definitions and Explenation

- **What is the difference between the AIM HIGH SLAM & the DALUX SLAM&IMPROVE ?**

“AIM HIGH observation App” is our open access digitalised observation platform that is accessed via a QR Code or Mobile telephone and is open to anyone. The **SLAM** button was added onto the platform to give a means of recording SLAMs carried by the workforce on site with no access or training in the use of the official Align performance monitoring platform Dalux.

Dalux “SLAM & IMPROVE” is the **formal management platform** of monitoring “Change” and validation that is used by Align JV Management & supervisory staff and support teams. Formal access is granted and protected by passwords.

• What is a SLAM ?

SLAM is an unforeseen, unsafe event/situation or a change **that requires the work to be physically Stopped and validated before restarting of works.**

People to contact I SHARE IT DURING THE NEXT BRIEFING	Detect unforeseen event Before to start I am attentive to 1 I know the tasks I have to perform 2 I know the rules to respect 3 I have checked my equipment, the environment During works I am attentive to 1 I don't put myself in danger 2 I ask my colleagues around me to check if they don't put themselves in danger 3 I detect all unexpected or non usual situation	Human resources I'm a member of a full team with all necessary competencies for achieving our tasks Questions : ✓ The team is complete ⚠ I don't know ⚠ Someone is missing? Competencies? Logistic Deliveries, on site are scheduled, I'm aware of the planning and delivery areas are available Questions : ✓ As planned ⚠ I don't know ⚠ Delayed? Non organised?	Tasks The tasks I have to achieve were explained by my hierarchy and I have understood what I have to do Questions : ✓ Understood ⚠ I don't know ⚠ I have no briefing Equipment I have all the equipment I need and in good condition Questions : ✓ Adapted and functional ⚠ I don't know ⚠ Missing or faulty	Work management I know the planning, the tasks to achieve and coactivities scheduled Questions : ✓ Clear, defined and understood ⚠ I don't know ⚠ Unexpected coactivity? Planning modified? External factor I don't encounter unexpected obstacle during works and I don't notice worth weather condition Questions : ✓ None ⚠ I don't know ⚠ Something unexpected? (weather, obstacle...)	WORKFORCE Manage safely unforeseen events together ALIGN HS2
☐ I continue to work ☐ I ask for more information ☐ I face an unforeseen Event (return the document)					

Definitions and Explanation

- **What's a H&S Dalux Observation?**

A Dalux H&S observation is a formal management action, minor improvement or positive observation that is escalated to the responsible management team of an area when an unsafe situation is seen during site inspection or “walk round”.

There may be a timescale set for the action, however that doesn't mean that it is a SLAM as work is not necessarily stopped.

- **What's an Aim High Observation but not a SLAM?**

The Aim High observation app is the open to anyone platform that can be used to raise any concerns or positive matters that they may face, see or suggest improvement. It's a quick way for the workforce to raise issues and to receive feedback from Management. It gives our teams and workforce a VOICE*

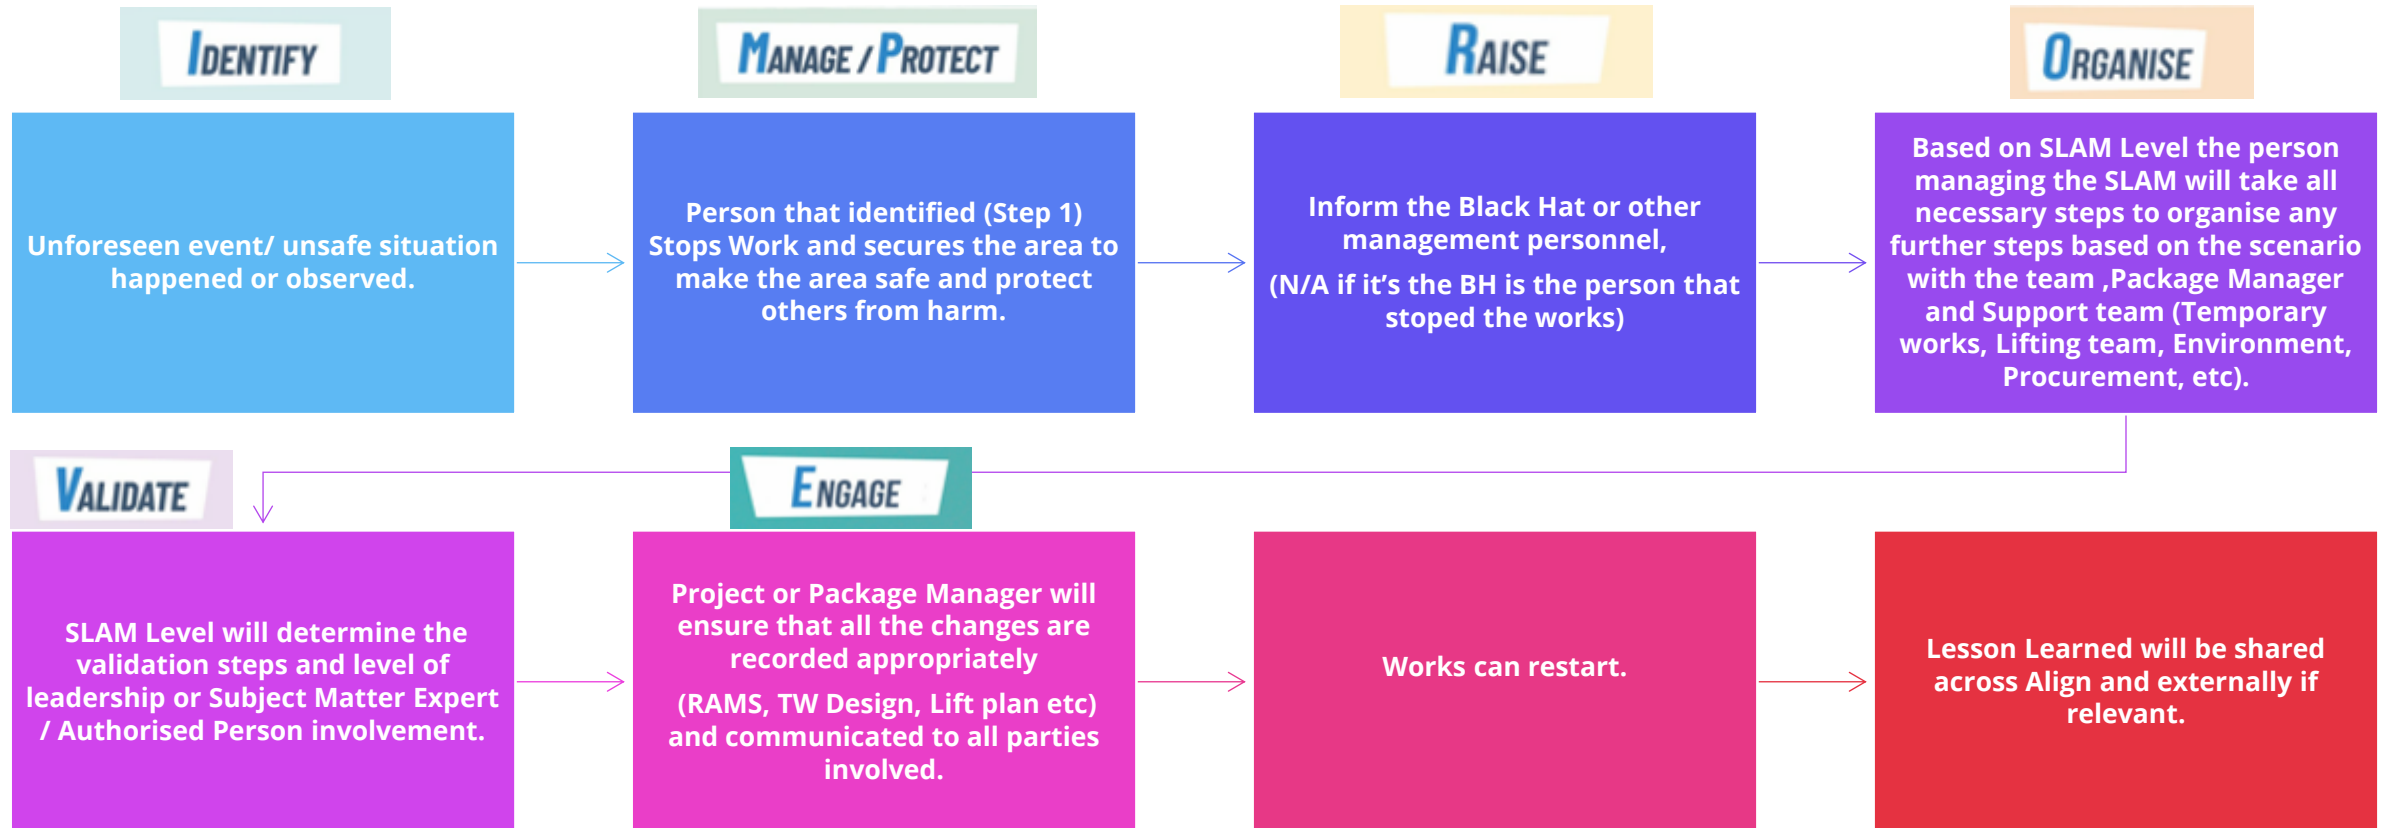

*Views of Operatives In the Construction Environment

SLAM & IMPROVE Process on Dalux

This process can be carried out using other means like phone conversation or emails, however the steps below must be recorded on Dalux when it takes place or after the event has been managed.

BH= Black Hat (Supervisor)

PM= Package Manager

SLAM & IMPROVE Level Explanation and Validation

Remember: SLAM always leads to work being stopped.

Level 1: HIPO Process to be followed.

- Could be a situation where circumstances could potentially lead to major event such as fatality, serious injury or catastrophic event.
- Most unsafe situations linked to Align 5 Major Risks fit the category of Level 1. HS2 and Align JV has a list of situations that are considered mandatory **HIPOs**.

Examples:

Operatives working at height without collective edge protection or protection

Loads being lifted over personnel

Fire in tunnel leading to partial or full evacuation

SLAM & IMPROVE Level Explanation and Validation

Remember: SLAM & IMPROVE always leads to work being stopped.

Level 2: Requires Package Manager / Project Manager Validation

This level of SLAM & IMPROVE is applicable when the stopped activities / task requires further assistance / advice from the Support teams (Procurement, Temporary Works, Lifting team, H&S, Environment, etc).

- All these changes to the work method, need Management Validation on Dalux by either the package manager or project manager for work to recommence.
- This level will require further action such as : RAMS review, Revised permits, lessons learned, etc).

Examples:

- The correct equipment is not available for the work activity. Work is stopped/does not commence. A new plan for work is agreed and implemented to complete the activity when all necessary equipment is available for the work to be completed safely.

SLAM & IMPROVE : Level Explanation and Validation

Level 3: Validation by Black Hat or the person managing the SLAM & IMPROVE

What is a Level 3 SLAM & IMPROVE?

This level of SLAM doesn't require further intervention or resources from the support team or manager validation for the work to restart. The supervisor in charge of the work can assess the issue and manage the SLAM & IMPROVE internally. This will still need to be recorded onto Dalux.

Examples:

- Walkways need to be moved to finish a task, this will be a SLAM & IMPROVE as the works needs to be stopped and assessed before resting the active, however for activities link this that no further action from management are required the validation will be done by the Black hat and work can re start.
- An operative isn't wearing compliant PPE, the local Black Hat stops them working and they are re-briefed on the site and task requirements. Once the operative has been briefed and equipped with the correct PPE the Black Hat should upload the signed briefing form as evidence to Dalux and the work can resume.
- Plant equipment not properly segregated with barriers. Work is stopped and appropriate segregation is implemented before work restarts with approval from Black Hat.

Unforeseen event explanation and examples

Unforeseen Event

Unforeseen events may be defined as something that happens either suddenly or unexpectedly. It can be any change that effects the safety of an activity or environment.

Unforeseen Events E.g.

- New staff, changes in personnel, missing key personnel (e.g., off sick Slinger/Signaller)
- Changed tools, equipment, task
- Adverse weather conditions
- Staff turnover

Unsafe Events explanation and examples

Unsafe Events

Unsafe event can be any situation that can lead to the presence of a hazard or increase its adverse impact. For example, failing to follow a Life-Saving Rules.

Unsafe Events E.g.

- Not following approved processes
- Stand between a load and a fixed obstacle or the edge of a drop
- Go beneath a load while it is being raised or lowered
- Put hands on a lifted load
- Openings leading to drops left unprotected and unmarked
- Enter an exclusion zone above or below a working at height activity
- Work at height without either collective fall protection, guard rails and toe boards, safety netting, air bags or other measure in place prior to the opening or edge being created.
- Use machinery on an unstable and or properly prepared ground
- Working on an equipment without applying LOTO and ensure the absence of energy
- use a phone while operating any vehicle or machine

How to Access ALL raised SLAM & IMPROVE

Access to view the below can be given upon request for this contact l.scotnitchi@alignjv.com

The screenshot displays the DALUX software interface. The top navigation bar shows the project name 'MWCC - C1 - Chiltern Tunnels and Colne Valley Viaduct' and the user 'Liuba Marjin'. The left sidebar contains navigation options: Dashboard, Locations, Field (highlighted with a red '10'), Box, Analytics, Tasks (with a count of 464), Saved filters (10), Inbox (42), Ongoing (1), Awaiting approval, Approved, follow-up (389), Closed, Drafts, Forms (1323/1429), Saved filters, Align, Best Practice, Lessons Learnt, Filter - Health and Safety Statistics, EXCO-Senior Leadership Engagement, and SLAM & IMPROVE (highlighted). The main content area is titled 'SLAM & IMPROVE' and features a search bar, a filter button 'Work packa...', and a table of activities.
